Congress. House. Committee on Appropriations. Subcommittee on Agriculture, Rural Development, Food and Drug Administration, and Related Agencies, 2011 **Natural Resources and Society: Understanding the Complex Relationship Between Humans and the Environment** Mohd Akhter Ali, M. Kamraju, 2023-11-14 Natural Resources and Society Understanding the Complex Relationship Between Humans and the Environment is a study of the dynamic interplay between humans and the natural world The book explores the complex relationship between human societies and the environment examining how human actions can both impact and be influenced by natural resources The book covers a broad range of topics including the history of human resource use the role of natural resources in economic development and the environmental impacts of resource extraction and consumption It also considers the social and cultural factors that shape human interactions with the natural world and the challenges of sustainable resource management Overall the book provides a comprehensive overview of the relationship between humans and the environment emphasizing the importance of understanding this relationship in order to develop more sustainable and equitable societies Natural Resources, Renewable Energy, and Governance Tii Njivukuh Nchofoung, Nathanael Ojong, 2022 Based on data for 48 African countries for the period 2000-2020 we analyse the effects of natural resources on renewable energy development and the mediating effects of governance on that relationship For this purpose the Ordinary Least Squares method was used to develop a baseline regression model and the Generalized Method of Moments GMM approach was used for the dynamic model regression Quantile regression was used for robustness checking across the various distributions of renewable energy First we find that natural resources enhance renewable energy development in Africa and that the results are robust across alternative specifications of natural resources and governance except for forest resources which have a negative effect on renewable energy development When robustness is checked through a quantile regression analysis the results show that the positive effect depends on the conditional distribution of natural resources and the type of natural resource under consideration The negative effect of total natural resources becomes weaker as we move towards higher quantiles Second governance interacts with natural resource rents to generate positive effects across different governance specifications and natural resources except for coal rent We thereby derive some relevant implications for renewable energy financing in African countries **Renewable Energy** Marc A. Rosen, 2016 Encyclopedia of Energy, Natural Resource, and Environmental Economics, 2013-03-29 Every decision about energy involves its price and cost The price of gasoline and the cost of buying from foreign producers the price of nuclear and hydroelectricity and the costs to

our ecosystems the price of electricity from coal fired plants and the cost to the atmosphere Giving life to inventions lifestyle changes geopolitical shifts and things in between energy economics is of high interest to Academia Corporations and Governments For economists energy economics is one of three subdisciplines which taken together compose an economic approach to the exploitation and preservation of natural resources energy economics which focuses on energy related subjects such as renewable energy hydropower nuclear power and the political economy of energy resource economics which covers subjects in land and water use such as mining fisheries agriculture and forests environmental economics which takes a broader view of natural resources through economic concepts such as risk valuation regulation and distribution Although the three are closely related they are not often presented as an integrated whole This Encyclopedia has done just that by unifying these fields into a high quality and unique overview The only reference work that codifies the relationships among the three subdisciplines energy economics resource economics and environmental economics Understanding these relationships just became simpler Nobel Prize Winning Editor in Chief joint recipient 2007 Peace Prize Jason Shogren has demonstrated excellent team work again by coordinating and steering his Editorial Board to produce a cohesive work that guides the user seamlessly through the diverse topics This work contains in equal parts information from and about business academic and government perspectives and is intended to serve as a tool for unifying and systematizing research and analysis in business universities and government
