Nature Of Life 6 Chapters:

The Nature of Life Mark A. Bedau, Carol E. Cleland, 2018-11-22 Introduces a broad range of scientific and philosophical issues about life through the original historical and contemporary sources *Agency and Organisation: The Dialectics of Nature and Life* Rasmus Sandnes Haukedal, 2025-12-16 This book examines groundbreaking changes occurring within evolutionary theory where the dominant gene centered view that still occupies public imagination is being challenged by new perspectives Under the banner of the Extended Evolutionary Synthesis these changes have placed the organism and its agency back at the center of evolution challenging long held dogmas that seemed untouchable By mapping these theoretical developments and examining their relationship with contemporary philosophical movements this work builds toward a dialectical philosophy of nature offering a systematic framework for how the humanities and philosophy can productively engage with natural science It presents a new vision that places life at its center seeking to unify different fields of knowledge while respecting their unique approaches and insights rather than forcing them to conform to a single method

The Nature of Order, Book One: The Phenomenon of Life Christopher Alexander, 2020-03-30 Christopher Alexander's series of ground breaking books including A Pattern Language and The Timeless Way of Building have pointed to fundamental truths of the way we build revealing what gives life and beauty and true functionality to our buildings and towns Now in The Nature of Order Alexander explores the properties of life itself highlighting a set of well defined structures present in all order and in all life from micro organisms and mountain ranges to good houses and vibrant communities In The Phenomenon of Life the first volume in this four volume masterwork Alexander proposes a scientific view of the world in which all space matter has perceptible degrees of life and sets this understanding of order as an intellectual basis for a new architecture With this view as a foundation we can ask precise questions about what must be done to create more life in our world whether in a room a humble doorknob a neighbourhood or even in a vast region He introduces the concept of living structure basing it upon his theories of centers and of wholeness and defines the fifteen properties from which according to his observations all wholeness is built Alexander argues that living structure is at once both personal and structural Taken as a whole the four books create a sweeping new conception of the nature of things which is both objective and structural hence part of science and also personal in that it shows how and why things have the power to touch the human heart A step has been taken through which these two domains the domain of geometrical structure and the feeling it creates kept separate during four centuries of scientific thought from 1600 to 2000 have finally been united
