Origins of Modern Humans Biology Reconsidered is an ideal read for students grad students and professionals in human evolution and paleoanthropology **The Neanderthals** Stephanie Muller, Friedemann Schrenk, 2008-10-27 The Neanderthal is among the most mysterious relatives of Homo sapiens Was he a dull club swinging muscleman or a being with developed social behaviour and the ability to speak to plan precisely and even to develop views on the afterlife For many the Neanderthals are an example of primitive humans but new discoveries suggest that this image needs to be revised Half a million years ago in Ice Age Europe there emerged people who managed to cope well with the difficult climate Neanderthal Man They formed an organized society hunted Mammoths and could make fire They were able to pass on knowledge they cared for the old and the handicapped burying their dead and placing gifts on their graves Yet they became extinct despite their cultural abilities This richly illustrated book written for general audiences provides a competent look at the history living conditions and culture of the Neanderthal **Die Neandertaler** Friedemann Schrenk, Stephanie Müller, 2005

Mythos Neanderthal Dirk Matejovski, Dietmar Kamper, Gerd-Christian Weniger, 2001 **The Climate of Past Interglacials** F. Sirocko, M. Claussen, T. Litt, M.F. Sanchez-Goni, 2006-12-08 Historically climate fluctuations such as the Little Ice Age show that interglacial climate change is not entirely stable but responds to even subtle changes in radiative forcing Through research it has been made clear that even an abrupt change of climate within years is not just a theoretical possibility but has in fact happened in the prehistoric past It is therefore clear that in principle it could happen again Human civilization has exploded under the mild and relatively stable climatic conditions that have prevailed over the last 11 000 years This book focuses on revisiting the past and to study climate and environment in a suite of experiments where boundary conditions are similar but not identical to today so we can learn about the climate environment system its sensitivity thresholds and feedback The palaeoclimate community holds an important key to scientific information on climate change that provides a basis for appropriate adaptation and mitigation strategies The authors of this book have taken up this challenge and summarize their results in this special volume It presents state of the art science on new reconstructions from all spheres of the Earth System and on their synthesis on methodological advances and on the current ability of numerical models to simulate low and high frequency changes of climate environment and chemical cycling related to interglacials Summarizes important information on climate change providing a basis for appropriate adaptation and mitigation strategies for human civilization Reports on new reconstructions on methodological advances numerical models simulating low and high frequency changes and chemical cycling related to interglacials Incorporates palaeovegetation and numerical modeling of climate and environmental and geochemical parameters to address regional feedback to global change with successful data models
