

Type II: $f(p, q, z) = 0$

Let us consider the Equations of the type $f(p, q, z) = 0$

Let z is a function of u i.e. $z = z(u)$ and $u = x + ay$

Now,
$$p = \frac{\partial z}{\partial x} = \frac{dz}{du} \cdot \frac{\partial u}{\partial x} = \frac{dz}{du} \cdot 1 = \frac{dz}{du}$$

$$q = \frac{\partial z}{\partial y} = \frac{\partial z}{\partial u} \frac{\partial u}{\partial y} = a \frac{\partial z}{\partial u}$$

$f\left(\frac{dz}{du}, a \frac{dz}{du}, z\right) = 0$ is the 1st order differential equation in terms of dependent variable z and independent variable u .
Solving this differential equation and finally substitute $u = x + ay$ gives the required solution.

Solving Nonlinear Partial Differential Equations with Maple and Mathematica Inna Shingareva,Carlos Lizárraga-Celaya,2011-07-24 The emphasis of the book is given in how to construct different types of solutions exact approximate analytical numerical graphical of numerous nonlinear PDEs correctly easily and quickly The reader can learn a wide variety of techniques and solve numerous nonlinear PDEs included and many other differential equations simplifying and transforming the equations and solutions arbitrary functions and parameters presented in the book Numerous comparisons and relationships between various types of solutions different methods and approaches are provided the results obtained in Maple and Mathematica facilitates a deeper understanding of the subject Among a big number of CAS we choose the two systems Maple and Mathematica that are used worldwide by students research mathematicians scientists and engineers As in the our previous books we propose the idea to use in parallel both systems Maple and Mathematica since in many research problems frequently it is required to compare independent results obtained by using different computer algebra systems Maple and or Mathematica at all stages of the solution process One of the main points related to CAS is based on the implementation of a whole solution method e g starting from an analytical derivation of exact governing equations constructing discretizations and analytical formulas of a numerical method performing numerical procedure obtaining various visualizations and comparing the numerical solution obtained with other types of solutions considered in the book e g with asymptotic solution Nonlinear Partial Differential Equations in Engineering W. Implicit Partial Differential Equations Bernard

Dacorogna, Paolo Marcellini, 1999-08-01 Nonlinear partial differential equations has become one of the main tools of modern mathematical analysis in spite of seemingly contradictory terminology the subject of nonlinear differential equations finds its origins in the theory of linear differential equations and a large part of functional analysis derived its inspiration from the study of linear pdes In recent years several mathematicians have investigated nonlinear equations particularly those of the second order both linear and nonlinear and either in divergence or nondivergence form Quasilinear and fully nonlinear differential equations are relevant classes of such equations and have been widely examined in the mathematical literature In this work we present a new family of differential equations called implicit partial differential equations described in detail in the introduction of Chapter 1 It is a class of nonlinear equations that does not include the family of fully nonlinear elliptic pdes We present a new functional analytic method based on the Baire category theorem for handling the existence of almost everywhere solutions of these implicit equations The results have been obtained for the most part in recent years and have important applications to the calculus of variations nonlinear elasticity problems of phase transitions and optimal design some results have not been published elsewhere
