Nonlinear Finite Element Analysis In Str:

Nonlinear Finite Element Analysis of Solids and Structures René de Borst, Mike A. Crisfield, Joris J. C. Remmers, Clemens V. Verhoosel, 2012-07-25 Built upon the two original books by Mike Crisfield and their own lecture notes renowned scientist Ren de Borst and his team offer a thoroughly updated yet condensed edition that retains and builds upon the excellent reputation and appeal amongst students and engineers alike for which Crisfield's first edition is acclaimed. Together with numerous additions and updates the new authors have retained the core content of the original publication while bringing an improved focus on new developments and ideas. This edition offers the latest insights in non linear finite element technology including non linear solution strategies computational plasticity damage mechanics time dependent effects hyperelasticity and large strain elasto plasticity. The authors integrated and consistent style and unrivalled engineering approach assures this book's unique position within the computational mechanics literature. Key features: Combines the two previous volumes into one heavily revised text with obsolete material removed an improved layout and updated references and notations. Extensive new material on more recent developments in computational mechanics. Easily readable engineering oriented with no more details in the main text than necessary to understand the concepts. Pseudo code throughout makes the link between theory and algorithms and the actual implementation. Accompanied by a website www.wiley.com/go/deborst with a Python code based on the pseudo code within the book and suitable for solving small size problems. Non linear Finite Element Analysis of Solids and Structures 2nd Edition is an essential reference for practising engineers and researchers that can also be used as a text for undergraduate and graduate students within computational mechanics.

Shell and Spatial Structures: Computational Aspects Guido De Roeck, Avelino Samartin Quiroga, Marcel A.V.A. Van Laethem, Edgard Backx, 2013-03-13 In recent years powerful engineering workstations for a reasonable price become a valuable tool for the design of complicated constructions such as shell and spatial structures. This availability causes an increasing use of advanced numerical techniques for the static and dynamic analysis of these structures also in the non linear range. The I A S S Working Group nO 13 concerned with Numerical Methods in Shell and Spatial Structures and the Department of Civil Engineering of the Katholieke Universiteit Leuven have taken the initiative to organise an International Symposium providing a forum for discussion and exchange of views between researchers specialists in numerical analysis on one hand and designers practising engineer ings on the other hand. These Proceedings contain the papers presented at the Symposium held in Leuven July 14 16 1986. The papers are organised in five sections: 1 Shell structures 2 Spatial structures 3 Dynamic analysis 4 Non linear analysis 5 Presentation and interpretation of results. The papers covering more than one domain are classified following the main subject. We hope that researchers as well as practising engineers will find a lot of useful information in the book.
