Nonlinear Models in Medical Statistics James K. Lindsey, 2001 This text provides an introduction to the use of nonlinear models in medical statistics It is a practical text rather than a theoretical one and assumes a basic knowledge in statistical modelling and of generalized linear models The book first provides a general introduction to

nonlinear models comparing them to generalized linear models It describes data handling and formula definition and summarises the principal types of nonlinear regression formulae there is an emphasis on techniques for non normal data Following chapters provide detailed examples of applications in various areas of medicine epidemiology clinical trials quality of life pharmacokinetics pharmacodynamics assays and formulations and molecular genetics The book concludes with appendices describing data handling and model formulae in more detail and given ways of modelling dependencies in repeated measurements and data for the exercises

Contemporary Statistical Models for the Plant and Soil Sciences Oliver

Schabenberger,Francis J. Pierce,2001-11-13 Despite its many origins in agronomic problems statistics today is often unrecognizable in this context Numerous recent methodological approaches and advances originated in other subject matter areas and agronomists frequently find it difficult to see their immediate relation to questions that their disciplines raise On the other hand statisticians often fail to recognize the riches of challenging data analytical problems contemporary plant and soil science provides The first book to integrate modern statistics with crop plant and soil science Contemporary Statistical Models for the Plant and Soil Sciences bridges this gap The breadth and depth of topics covered is unusual Each of the main chapters could be a textbook in its own right on a particular class of data structures or models The cogent presentation in one text allows research workers to apply modern statistical methods that otherwise are scattered across several specialized texts The combination of theory and application orientation conveys why a particular method works and how it is put in to practice About the downloadable resources The accompanying downloadable resources are a key component of the book For each of the main chapters additional sections of text are available that cover mathematical derivations special topics and supplementary applications It supplies the data sets and SAS code for all applications and examples in the text macros that the author developed and SAS tutorials ranging from basic data manipulation to advanced programming techniques and publication quality graphics Contemporary statistical models can not be appreciated to their full potential without a good understanding of theory They also can not be applied to their full potential without the aid of statistical software

Dynamic Nonlinear Econometric Models Benedikt M. Pötscher, Ingmar R. Prucha, 2013-03-09 Many relationships in economics and also in other fields are both dynamic and nonlinear A major advance in econometrics over the last fifteen years has been the development of a theory of estimation and inference for dynamic nonlinear models This advance was accompanied by improvements in computer technology that facilitate the practical implementation of such estimation methods In two articles in *Econometric Reviews* i.e. Pötscher and Prucha 1991a,b we provided an expository discussion of the basic structure of the asymptotic theory of M-estimators in dynamic nonlinear models and a review of the literature up to the beginning of this decade Among others the class of M-estimators contains least mean distance estimators including maximum likelihood estimators and generalized method of moment estimators The present book expands and revises the discussion in those articles It is geared towards the professional econometrician or statistician Besides reviewing the literature we also presented in the above mentioned articles a number of then new results One example is a consistency result for the case where the identifiable uniqueness condition fails
