Progress in Catheter Ablation Liong Bing Liem, Eugene Downar, 2013-11-11 Catheter ablation is widely accepted as an effective and safe form of therapy for cardiac arrhythmia In many instances this curative procedure is considered as the first line of therapy if not the ultimate treatment of choice With the use of radiofrequency RF modality which has revolutionized the technology from a barotraumatic potentially injurious procedure using high voltage direct current DC shock to a safe and relatively painless one catheter ablation procedure now carries a very low risk and is extremely effective for certain types of arrhythmia Its efficacy

rate in curing supraventricular tachycardia involving an accessory pathway or dual atrioventricular nodal pathways has been near perfect and its application for certain types of atrial and ventricular arrhythmia have also been very satisfactory. However conventional RF ablation has several well known limitations most notably is its ability to only produce relatively small point lesions rendering it effective only for an arrhythmia with a small and or a superficial target. It was soon recognized that the technology would not likely to have significant utility in arrhythmia with a more widespread target such as atrial fibrillation or those which involve scarred and deep myocardial tissue such as ventricular tachycardia. Indeed the application of conventional RF technology in these complex but common arrhythmia has yielded unsatisfactory results.

Handbook of Cardiac Electrophysiology Andrea Natale, 2007-05-30 The first practical user friendly guide to the theory and practice of a routinely used technique this new manual provides the specialist in training with a thorough grounding in the equipment procedures and clinical findings with which clinicians need to be familiar. Conceived as an alternative to the large and expensive texts aimed at specialists. Catheter Ablation of Cardiac Arrhythmias C. Schmitt, I. Deisenhofer, B.

It is a practical guide for exact diagnosis of cardiac arrhythmias mapping of cardiac arrhythmias with newest 3D technology and catheter ablation of various arrhythmias from WPW syndrome to atrial fibrillation. Colored intracardiac tracings as well as fluoroscopic and 3D mapping images reflect the situation in the EP lab and will lead to the right diagnosis and successful ablation. **An**
