Managing Government Property Assets Olga Kaganova, 2006 Governments own a vast array of real property from large stretches of land to public housing projects from water distribution systems and roads to office buildings Typically management of public property is highly fragmented with responsibility for each type of asset falling within a different agency or bureaucracy In almost all countries different classes of property are managed according to their own rules often following traditional practices rather than any assessment of what type of management is appropriate Over the past decade however a new discipline has emerged that examines this important component of public wealth and seeks to apply standards of economic efficiency and effective organizational management Managing Government Property Assets reviews and analyzes this recent wave of activity The authors draw upon a wide variety of national and local practices both in countries that have been leaders in management reforms and in countries just beginning to wrestle with the problem This

comparison reveals that the issues of public property management are surprisingly similar in different countries despite striking differences in institutional contexts and policy solutions

Property Asset Management D. Scarrett, 2002-11-01

ASSET MANAGEMENT HANDBOOK FOR REAL ESTATE PORTFOLIOS R. M. Santucci, 2013-10

The Asset Management Handbook is divided into three phases. Chapters 1 through 3 are conceptual introductions. Chapters 4, 5, 6 and 7 get into the meat of the policies and techniques of evaluating the capital needs of your property over the next 40 years. Chapters 8 and 9 help you identify which properties are doing well and which are the most threatened. What action should you take? What are the standard preservation and rejuvenation options available to a real estate portfolio manager? What is Asset Management? People are more accustomed to thinking about asset management of money or stocks or a package of annuity and savings accounts. Real estate asset management is a slower longer term process. The properties in your portfolio especially in affordable housing have life cycles of 30, 40 or infinite time periods. Most nonprofit owners are not interested in selling to capture any appreciation on their properties. Their goal is to provide housing for the foreseeable future as long as the asset can perform. Many nonprofits and mid size property owners do not have a dedicated asset manager. It is extraordinarily important that someone take on that long term analysis be it for 10%, 25% or 50% of a full time employee. The next step is to benchmark your properties. How are you doing compared to the world? Not just on straight bottom line consideration but how about in human services. Have you saved sufficient money to replace the roof or add the sprinklers that will be required at the next renovation? The Asset Management Handbook provides well established objective criteria for 25 different variables. We've seen participants in the asset management practicum expand that up to 40 variables to analyze on an annual basis. We'll see how benchmarking and risk ranking of your portfolio are essential first steps in establishing its viability and needs.

Capital Needs and Their Funds In this meat of the manual we walk you through essential policies that define how your properties will operate over the long term. We show how policies made by lenders, bankers and other short term partners can be self destructive and damaging to property owners holding for the long term. First example of the dichotomy the lender is suggesting the reserve is sufficient when two years after their loan matures the property will require 4 million of replacement expenditures. This is fine for investment property held for resale. You just flip it and get down the road. Most affordable housing owners do not consider selling the property as a positive outcome. Even if you've never performed a property inspection before the Handbook offers you easy methods of counting and sorting components into well established remaining economic lives. Then it is on to the massive spreadsheet that calculates the future need and the various waves in which it will appear. Exterior paint first then roofs, windows and doors and kitchens and baths follow and then it starts all over.

again Most capital needs assessments performed by third parties make financial assumptions that are untenable Their interest rates on earnings are overstated and their inflation rate on the components are generally understated leaving you with significant shortfalls even if you have escrowed according to directions We will keep you out of that trap showing you the realistic funds that are required and the time periods when the inevitable refinancing windows will occur Risk and Solutions In the final section we evaluate your primary risks Which properties should you address first Which properties have the strength and energy to function on their own Then what should you do about it Refinance Renegotiate Value engineer Raise rents In the foot race the runner is always caught by the tsunami of required replacements It is just a fact of the business that every 20 to 30 years you ve got to re invest a significant amount of money **Public Sector Property Asset**

Governmentwide Real Property Information Sharing (GRPIS) Report United States. General Services Administration. Office of Real Property, United States. General Services Administration, 1998

Belgium Real Estate Yearbook 2007 , **Real Property in Australia** Michael J. Hefferan, 2020-08-17 Real property in the form of investment ownership and use pervades almost every aspect of daily lives and represents over 40% of Australia's wealth. Such assets do not exist in isolation; they are dynamic and forever evolving, impacted by a range of physical, economic, demographic, legal, and other forces. Consequently, a true appreciation of individual assets and of the property sector as a whole demands an understanding of both the assets themselves and the context and markets in which they exist. The sector is complex and on the face of it confusing. It is, however, not without logic and underlying themes and principles. This book provides a wider understanding of how the real property sector works. It covers topics such as the nature of real property and its functions, economic drivers, valuation principles, legal and tenure parameters, property taxation, land development and subdivision, asset and property management, and sustainability—all critical components in this complex and critically important sector. It provides a wide and balanced perspective for experienced practitioners, investors, students, and anyone involved in property decision making or wishing to secure a deeper understanding of these areas. The book integrates research-based theory with practical application and first-hand insights into a sector that underpins the Australian economy, its communities, and its sustainability.

Federal Real Property: an Update on High Risk Issues Mark L. Goldstein, 2009-12 In Jan 2003, federal real property was designated as a high risk area because of long-standing problems with excess and underutilized property, deteriorating facilities, unreliable real property data, over-reliance on costly leasing, and security challenges. In Jan 2009, it was found that agencies have taken some positive steps to address real property issues, but that some of the core problems persist. This testimony focuses on 1) progress made by major real property holding agencies to strategically manage real property, 2) ongoing problems regarding agencies' efforts to address real property issues, and 3) underlying obstacles identified as hampering agencies' real property reform efforts governmentwide.
