Real Science:

Real Science John M. Ziman, 2000-04-27 Scientists and anti scientists alike need a more realistic image of science The traditional mode of research academic science is not just a method it is a distinctive culture whose members win esteem and employment by making public their findings Fierce competition for credibility is strictly regulated by established practices such as peer review Highly specialized international communities of independent experts form spontaneously and generate the type of knowledge we call scientific systematic theoretical empirically tested quantitative and so on Ziman shows that these familiar philosophical features of scientific knowledge are inseparable from the ordinary cognitive capabilities and peculiar social relationships of its producers This wide angled close up of the natural and human sciences recognizes their unique value whilst revealing the limits of their rationality reliability and universal applicability It also shows how for better or worse the new post academic research culture of teamwork accountability etc is changing these supposedly eternal philosophical characteristics

Conceptual Anomalies in Economics and Statistics Leland Gerson Neuberg, 1989-05-26 Do economics and statistics succeed in explaining human social behaviour To answer this question Leland Gerson Neuberg studies some pioneering controlled social experiments Starting in the late 1960s economists and statisticians sought to improve social policy formation with random assignment experiments such as those that provided income guarantees in the form of a negative income tax This book explores anomalies in the conceptual basis of such experiments and in the foundations of statistics and economics more generally Scientific inquiry always faces certain philosophical problems Controlled experiments of human social behaviour however cannot avoid some methodological difficulties not evident in physical science experiments Drawing upon several examples the author argues that methodological anomalies prevent microeconomics and statistics from explaining human social behaviour as coherently as the physical sciences explain nature He concludes that controlled social experiments are a frequently overrated tool for social policy improvement

Making Sense of Social Theory

Charles H. Powers, 2010-01-16 *Making Sense of Social Theory* opens by carefully exploring what it means to follow the scientific method in a field like sociology. The author goes on to analyze sociology as a genuine science with a body of explanatory insights. It does this by a) considering the major insights of key thinkers including Marx, Durkheim, Weber, and Mead among others; b) distinguishing different analytical frameworks especially exchange, symbolic interactionism, conflict, and structural functionalism in terms of their underlying assumptions; and c) revealing compelling social science explanatory insights in the form of predictive principles that can be applied in understanding processes of change at work in the social world from face to face encounters to major historical trends. Sociological theory is applied in ways that make its relevance and power apparent. In reading this book, theory no longer stands divorced from real world research or practice. *Making Sense of Social Theory* clearly establishes the pertinence of sociology's great theoretical insights for all social science researches and practitioners. Is God Incompetent? Geoffrey E. L. Bennett, 2019. Is God to blame for natural disasters? Does He cause volcanic action, flooding, earthquakes, plague, and genetic disease? Can He prevent them? Why doesn't He? Geoffrey E. L. Bennett uncovers deep Biblical insights linking them to twenty-first century cultural and scientific answers. Is God cruel or callous? Is He impotent or incompetent? How can I know if God even exists? Part one explores pain and shows how different cultural groups understand God to be vindictive and cruel or else limited in power or believe that suffering does not really exist. Part two examines Old Testament teaching on suffering, challenging the idea of ancient wisdom. Profound teaching is dissected from the minor and major prophets as well as the story of Job. Then the New Testament fulfillment of prophecy is examined, challenging perceived ideas and finishes with an interpretation of the Apocalypse. The concluding solution to pain and suffering of God. Part three deals with scientific theories and twenty-first century concepts of the universe and the physical world together with raw nature and biogenetic problems. What place does God have in our modern world? Do natural disasters Acts of God show a limited or incompetent Deity?

Popper: A Centenary Assessment Volume I Ian Charles Jarvie, Karl Milford, David W. Miller, 2006. Sir Karl Popper 1902-1994 is one of the most controversial and widely read philosophers of the 20th century. His influence has been enormous in the fields of epistemology, logic, metaphysics, methodology of science, the philosophy of physics and biology, political philosophy and the social sciences, and his intellectual achievement has stimulated many scholars in a wide range of disciplines. These three volumes of previously unpublished essays which originate in the congress Karl Popper 2002 held in Vienna to mark the centenary of Popper's birth provide an up to date examination of many aspects of Popper's life and thought. Volume 1 discusses a variety of topics in Popper's early intellectual history and considers also some features of his remarkable influence outside philosophy. The second part of the volume contains papers that from different political perspectives tackle problems raised by Popper's principal contribution to political theory: democracy and community. The Open Society and Its Enemies. Volume 2 deals especially with Popper's metaphysics and epistemology including his proposal: critical rationalism, that it is through sharp criticism rather than through the provision of justification that our knowledge progresses. Several papers tackle the problem of the empirical basis and offer decidedly different answers to some unresolved questions. The volume contains also a number of papers evaluating Popper's celebrated but much contested solution to Hume's problem of induction. Volume 3 examines Popper's contribution to our understanding of logic, mathematics, physics, biology and the social sciences from economics to education. Among the topics covered are verisimilitude, quantum and statistical physics, the propensity interpretation of probability, evolutionary epistemology, the so called Positivusstreit, Popper's critique of Marx and his defence of the rationality principle as a component of all social explanations. Weston A Price Foundation Author of Nourishing Traditions If you stop any person on the street and ask them what causes heart disease you know what their answer will be butter and eggs meat and fat This infamous Diet Heart Hypothesis was proposed in 1953 and it took scientists all over the world a few decades to prove it wrong The trouble is that while science was beginning to cast doubt upon its basic tenets the Diet Heart Hypothesis was giving rise to a powerful and wealthy political and commercial machine with a vested interest in promoting it by means of anti fat and anti cholesterol propaganda presented relentlessly and with increasing intensity In Put Your Heart in Your Mouth Dr Campbell McBride tackles the subject of CHD Coronary Heart Disease caused by atherosclerosis a disease of the arterial wall that leads to narrowing and obstruction of the arteries She maintains that conventional medicine does not actually know the cause of atherosclerosis or how to cure it and explores in this book what it is what causes it and how to prevent and reverse it She dispels the myth of the Diet Heart Hypothesis and explains that cholesterol is not the enemy but an integral and important part of our cell membranes
