Natural History Of Vision:

A Natural History of Vision Nicholas J. Wade, 2000-01-31 This illustrated survey covers what Nicholas Wade calls the observational era of vision beginning with the Greek philosophers and ending with Wheatstone's description of the stereoscope in the late 1830s

A Natural History of Seeing Simon Ings, 2008 Ings work delves into both the evolution of sight and the evolution of the human understanding of sight The book presents the natural science while also addressing the history philosophy and mythology of how and why people see the way they do Illustrations throughout

The Eye Simon Ings, 2007 We spend about one tenth of our waking hours completely blind Only one percent of what we see is in focus at any one time We exist in a world we see that's always about half a second behind the real one In fact you don't need eyes to see blind volunteers have been taught to see through their chests Wasps can't see but map their surroundings instead If we are stared at our heartbeat rises and our galvanic skin response alters How many generations did it take for the first fish to acquire eyes Answer is 400 000 Why do humans have whites to their eyes when other species don't Could it be that thinking arose as an evolutionary response to seeing Without eyes would minds exist at all Be prepared to have your eyes opened Using a spellbinding mix of scientific research mathematics philosophy history neuroscience anecdote and language theory in *The Eye* Simon Ings unravels brilliantly the never ending puzzle of how and why we see in the way that we do From looking at the work of a huge range of theorists and scientists to myths and personal experiences and with the help of a beguiling mix of illustrated visual conundrums and enigmas Ings triumphs with a compelling dissection of the age old mysteries of the eye that's both seriously interesting and interestingly fun He tells the eye's whole story for the very first time fusing eye and sight into a single story this is popular science of the highest order

catered to audiences ranging from gentlemanly members of metropolitan societies to working class participants in local natural history clubs In addition to disseminating authorized scientific discovery they fostered a sense of collective identity among their geographically dispersed and often socially disparate readers by facilitating the reciprocal interchange of ideas and information As such they offer privileged access into the workings of scientific communities in the period The essays in this volume set the historical exploration of the scientific and medical periodicals of the era on a new footing examining their precise function and role in the making of nineteenth century science and enhancing our vision of the shifting communities and practices of science in the period This radical rethinking of the scientific journal offers a new approach to the reconfiguration of the sciences in nineteenth century Britain and sheds instructive light on contemporary debates about the purpose practices and price of scientific journals
