Himalaya Bindhy Wasini Pandey, 2002 **Sustainable Natural Resource Management in the Himalayan Region** Roshan Man Bajracharya, Bishal K. Sitaula, Smriti Gurung, Nani Raut, 2021 The greater Himalayan region stretching from Afghanistan in the west to Myanmar in the east is home to about a quarter of a billion people who greatly depend on available natural resources for their survival and livelihoods The ever increasing population pressure and changing climate have grave implications for the sustenance of human health and habitation in the foreseeable future The region is confronted with numerous challenges related to forest degradation land productivity disaster risk water management biodiversity loss erratic climatic patterns as well as socio-political capacity The limits of arable land have essentially been reached while the need for enhancing production to sustain human nutritive requirements and livelihoods continues to increase Hence the intensification of agriculture has become a necessity rather than a choice Yet producing greater numbers of crops and quantities of food fiber and other materials on the same parcel of land runs the risk of degrading the soil fertility productivity

and overall quality Therefore means to achieve this without irreversibly damaging the soil and land resource base have become imperative To this end agro forestry agro slivi pastoral systems and the adoption of a variety of regenerative crops soil and water management and conservation practices offer the potential to deliver multiple benefits without sacrificing the very resource upon which the human population depends The need for ecologically sound and sustainable management of natural resources in the Himalayan region as well as the adaptation of local communities to the impacts of climate change and measures for its mitigation cannot be over emphasized This book presents findings on approaches to sustainable land management and the intensification of agriculture and animal husbandry related to soil organic matter management and carbon sequestration for multiple benefits and the agroforestry as a crop diversification strategy with livelihood and climate mitigation adaptation benefits along with other aspects of forest biodiversity and water resources management The book deals with technical socio economic policy and biodiversity issues related to the sustainable use and management of natural resources namely forests soil land water crops animal husbandry and diversity of flora fauna as well as disaster risk and vulnerability of communities in the Himalayan region There is a continuing need to study and research approaches for harmonizing human needs and lifestyles with natural ecosystems and processes so that both may co exist in a mutually beneficial manner

Natural Resource Management B.W. Pandey (ed. By),2005-01-01 **Wildlife in the Himalayan Foothills** P. C. Tiwari,Bhagwati Joshi,1997 **Sustainable Management of Headwater Resources** Libor Jansky,Martin J. Haigh,Haushila Prasad,2005 Headwaters are the source of freshwater resources the margins of drainage basins and the first and zero order basins that surround every catchment The challenge is to define appropriate self sustainable management strategies and structures for these lands which meet the needs of the headwater habitat including its human inhabitants and the needs of habitats downstream The contributors to this book strive to anticipate emerging and future problems to discover integrated solutions to the problems already caused by land degradation natural hazards and development processes and to help develop better land management environmental protection and landscape regeneration practices and policies They also address the many challenges that remain the concern for effective sharing of local experience in science and technology community participation the role of education effectiveness and limits of current technology the selection of appropriate policies and goals modes of effective management and the sustainability of current activities Sustainable Management of Headwater Resources provides an understanding of current and prior situations and provides scientific analyses of local and regional headwater issues in India and Africa The authors analyse the current situation through field experiments that provide reliable information on the status of headwater resources in these regions This book originates from the conference on Sustainable Management of Headwater Resources at the 5th International Conference on Headwaters in Nairobi Kenya
