Natural History A Selection

Pline (l'Ancien.)

Natural History A Selection:

Natural History Pliny the Elder, Pliny (the Elder.), 1991-12-03 Pliny's Natural History is an astonishingly ambitious work that ranges from astronomy to art and from geography to zoology. Mingling acute observation with often wild speculation, it offers a fascinating view of the world as it was understood in the first century AD, whether describing the danger of diving for sponges, the first water clock, or the use of asses' milk to remove wrinkles. Pliny himself died while investigating the volcanic eruption that destroyed Pompeii in AD 79, and the natural curiosity that brought about his death is also very much evident in the Natural History, a book that proved highly influential right up until the Renaissance and that his nephew Pliny the younger described as full of variety as nature itself. John F. Healy has made a fascinating and varied selection from the Natural History for this clear modern translation. In his introduction, he discusses the book and its sources topic by topic. This edition also includes a full index and notes. For more than seventy years, Penguin has been the leading publisher of classic literature in the English-speaking world. With more than 1,700 titles, Penguin Classics represents a global bookshelf of the best works throughout history and across genres and disciplines. Readers trust the series to provide authoritative texts enhanced by introductions and notes by distinguished scholars and contemporary authors, as well as up-to-date translations by award-winning translators.

Concepts, Theories, and Rationality in the Biological Sciences Gereon Wolters, 2022-05-31 A Unified Report on the State of the Art in the Philosophy of Biology. In October 1993, the University of Pittsburgh hosted the Second Pittsburgh Konstanz Colloquium in the Philosophy of Science with a focus on the rapidly growing field of philosophy of biology. An interdisciplinary group of philosophers and scientists came together to discuss the basic theories and concepts of biology and their connections with ethics, economics, and psychology. The colloquium organizers strove to create an event that would provide attendees with a wide overview on the current state of the philosophy of biology with as many topics and views on these topics as possible. Those presentations are gathered here in a volume that offers the reader a varied and thorough survey of the field.

Selection of Reports and Papers of the House of Commons, 1836 *Darwin Studies* M.J.S. Hodge, 2023-05-31 This is the second of a pair of volumes by Jonathan Hodge collecting all his most innovative revisionist and influential papers on Charles Darwin and on the longer run of theories about origins and species from ancient times to the present The focus here is on Darwin himself and the development of his theories Darwin is now such an iconic hero in our histories and such a commanding authority in our sciences that it has become a serious challenge to study him as just another disaffected medical student or would be vicar aspiring zoology professor or gentleman of independent means thinking about sexual reproduction in animals and plants about coral islands or about rock strata and fossils in post Napoleonic Edinburgh Cambridge South America and London But the challenge is one well worth taking up as the papers here demonstrate for such studies require us integrate the precise details of his inquiries with those larger scientific metaphysical religious and political issues of the day that a young ambitious philosopher and naturalist was then expected to engage This contextual understanding can then allow us to reinterpret his relations to such longer run legacies as Christian Platonism Enlightenment materialism and British capitalism Together with the companion volume devoted to those and other long run legacies this volume offers throughout reinterpretations of both the theorist and his theories The Ethics of Species Ronald L. Sandler, 2012-09-20 This book develops and defends an ethic of species preservation genetic modification human enhancement and species creation
