

Natural Killer Cells

Eva Lotzova, Ronald B. Herberman

Natural Killer Cells:

Natural Killer Cells Michael T. Lotze, Angus W. Thomson, 2009-11-12 *Natural Killer Cells* explains the importance of killer cells and how they are produced. It mentions that the most likely explanation for killer cell production is that they serve as a complementary system for T cells as a primary defense against viruses. However, these cells defend against certain viruses only such as herpes viruses and influenza viruses. The book also explains the primary functions of killer cells and it discusses how these cells help recognize damaged tissues, limit further damage to tissues, and regenerate damaged tissues. It discusses how these cells mature and develop and it covers the different isolation culture and propagation methods of these cells. Furthermore, it focuses on the different killer cells that are present in various parts of the human body. The book concludes by explaining that natural killer cells are utilized for clinical therapy of malignancies and that they have led to positive outcomes in the field of biology and medicine. Provides a broad, detailed coverage of the biology and interactions of NK cells for students, fellows, scientists, and practitioners. Includes figures, histologic sections, and illustrations of the ontogeny of NK cells.

Natural Killer Cells Eric Vivier, James Di Santo, Alessandro Moretta, 2016-02-15 To celebrate the 40th anniversary of the discovery of Natural Killer (NK) cells, this volume focuses on the recent advances in our understanding of NK cell development and differentiation and their acquisition of functional properties as well as the latest models for NK cell analysis in mice and applications in clinical medicine. NK cells have travelled a circuitous path from their initial description as spontaneous killers for some simply an experimental artifact to being a bona fide subset of innate lymphoid cells with a complementary mode of action in immune defense and an important mediator of immune reactivity in health and disease. Together, these reviews provide a timely and concise picture of the evolution of NK cells as essential agents in immunity and as potent weapons against disease. This book offers an appealing and insightful resource for scientists and clinicians.

Natural Killer Cells in Tissue Compartments Massimo Vitale, Simona Sivori, Michael A. Caligiuri, 2020-03-24 *The Natural Killer Cell* Claire E. Lewis, 1992 The ability of an organism to combat infection by foreign particles and microbial pathogens is essential for its survival and evolutionary success. Such efforts at immunity can take two forms. A considerable number of works have been published which focus on the central role of antigen recognition and antibody structure and function in the host response to infection. This volume, however, discusses the recent shift in focus towards the natural or innate immune system which consists of various cell types and factors. These cells and factors can take part in immune responses without prior sensitization and have important modulatory effects on later specific responses. This work reviews the biology and function of the natural killer cell, covering such topics as the molecular basis of natural killer cell function and its role in viral infection, tumor biology, and transplantation. Graduate students and researchers in immunology, cell biology, and medicine will find this work a valuable resource on current research in this exciting field.

[Natural Killer Cells in Human Diseases: Friends or Foes?](#) Vincent Vieillard, Bree Foley, Sandra Lopez-Verges, 2018-02-23 NK cells are lymphocytes of the innate immune system.

that share some features with adaptive immune cells like T cells. They are well known for their importance to control viral infections and tumor development but also intracellular bacterial and parasitic infections. A balance between negative and positive signals transmitted via germ line encoded inhibitory and activating receptors controls the function of NK cells. Activated NK cells respond by killing the infected or tumor cells without prior sensitization and by producing cytokines and chemokines. It has been shown that NK cells cross talk with other immune cells such as dendritic cells and macrophages can shape T cell and B cell immune responses through direct interactions as well as by virtue of their cytokine chemokine production. NK cells can also regulate immune responses by killing other immune cells including activated T cells or by producing anti inflammatory cytokines upon excessive inflammation. However NK cells are not friends in all situations. Indeed it has been shown in LCMV infected murine models that depending on the viral inoculation load NK cells may either help fight infection or can promote chronic infection. Moreover in cancer models it has been shown that NK cells can kill anti tumoral T cells. Recent studies of NK cells in patients with cancer support the notion of detrimental roles of NK cells. Furthermore studies implicate NK cells in contributing to both graft rejection and tolerance to an allograft. In some autoimmune diseases like rheumatoid arthritis NK cells may promote disease pathogenesis. The scope of this Research Topic is to present and discuss knowledge on the role of NK cells in various diseases settings viral infections as well as other infections cancer transplantation and autoimmunity. The aim is to discuss how NK cells respond during disease and specifically when why and how NK cells can be harmful and if they exert different functions production of specific cytokines inhibition of other immune cells through other mechanisms beside cytotoxicity in these situations. Which are the NK cell subsets that play beneficial or deleterious roles in these diseases. Are there different phenotypes associated with protective NK cells e.g. antiviral antitumoral and NK cells involved in disease pathogenesis. How are these diverse NK cells activated and do they function primarily through direct cytotoxicity ADCC or cytokine and chemokine production. What are the signals or interactions that can change and shape the NK cell response shifting them from protective to harmful. We thank the authors that submitted reviews and original research manuscripts that help to better understand these questions with the aim that this will help the scientific community to determine what could be the main future research directions to better understand the role of NK cells in disease protection or development.
