Naturalizing Phenomenology Issues In Contemporary Phenomenology And Cognitive Science Writing Science:

Naturalizing Phenomenology Jean Petitot, 1999 This ambitious work aims to shed new light on the relations between Husserlian phenomenology and the present day efforts toward a scientific theory of cognition with its complex structure of disciplines levels of explanation and conflicting hypotheses The book s primary goal is not to present a new exegesis of Husserl s writings although it does not dismiss the importance of such interpretive and critical work Rather the contributors assess the extent to which the kind of phenomenological investigation Husserl initiated favors the construction of a scientific theory of cognition particularly in contributing to specific contemporary theories either by complementing or by questioning them What clearly emerges is that Husserlian phenomenology cannot become instrumental in developing cognitive science without undergoing a substantial transformation Therefore the central concern of this book is not only the progress of contemporary theories of cognition but also the reorientation of Husserlian phenomenology Because a single volume could never encompass the numerous facets of this dual aim the contributors focus on the issue of naturalization This perspective is far reaching enough to allow for the coverage of a great variety of topics ranging from general structures of intentionality to the nature of the founding epistemological and ontological principles of cognitive science to analyses of temporality and perception and the mathematical modeling of their phenomenological description This book then is a collective reflection on the possibility of utilizing a naturalized Husserlian phenomenology to contribute to a scientific theory of cognition that fills the explanatory gap between the phenomenological mind and brain

Phenomenalism, Phenomenology, and the Question of Time Adam Berg, 2015-12-15 Phenomenalism Phenomenology and the Question of Time A Comparative Study of the Theories of Mach Husserl and Boltzmann analyzes two interconnected themes the split between phenomenalism and phenomenology and the question of time in relation to physical processes and irreversibility in physics The first theme is the overlooked connections between the modern phenomenology of Edmund Husserl and his mentor Franz Brentano and phenomenalism as associated with Ernst Mach The book s historical conceptual perspective draws attention to the ways in which Husserl s twentieth century advance of phenomenological method was conceived in relation to Mach s late nineteenth century and early twentieth century work both in science and philosophy At first glance Mach s phenomenalism appears to be in stark contrast to Husserl s phenomenology but on closer inspection it influenced and informed its inception By analyzing Husserl s revolutionary method of phenomenology in connection to Mach s earlier conceptions the book elucidates the rise of modern physics especially through the work of Ludwig Boltzmann as an important context to both Mach s philosophical work and Husserl s early overtures into phenomenology and his later critique of the crisis of European sciences The discursive affinities and differences between phenomenalism and phenomenology are examined in terms of a more contemporary debate over naturalizing phenomenology either as a method continuous with science or reduced to it This immanent tension is examined and evaluated specifically through the second thematic axis of the book which deals with the question of time and irreversibility Time in physics conforms to an explanatory scheme that relegates the issues of directionality and symmetry of time to concepts that are radically different from any phenomenological attempts to explain temporality in terms of intuition and consciousness It is precisely through the notion of irreversibility that both perspectives scientific and phenomenological explicate time s arrow not as a mere manifestation of sensory asymmetry as Mach would have it but rather through indirect descriptions of time and temporal objects The issue of time s arrow irreversibility and Boltzmann s physical hypotheses regarding the nature of time are introduced and comparatively assessed with Husserl s work on phenomenology and the role of temporality to consciousness

The Cambridge Companion to Literature and Science Steven Meyer, 2018-05-03 In 1959 C P Snow lamented the presence of what he called the two cultures the apparently unbridgeable chasm of understanding and knowledge between modern literature and modern science In recent decades scholars have worked diligently and often with great ingenuity to interrogate claims like Snow s that represent twentieth and twenty first century literature and science as radically alienated from each other The Cambridge Companion to Literature and Science offers a roadmap to developments that have contributed to the demonstration and emergence of reciprocal connections between the two domains of inquiry Weaving together theory and empiricism individual chapters explore major figures Shakespeare Bacon Emerson Darwin Henry James William James Whitehead Einstein Empson and McClintock major genres and modes of writing fiction science fiction non

Phenomenology or Deconstruction? Christopher Watkin, 2009-03-03 Phenomenology or Deconstruction challenges traditional understandings of the relationship between phenomenology and deconstruction through new readings of the work of Maurice Merleau Ponty Paul Ricur and Jean Luc Nancy A constant dialogue with Jacques Derrida's engagement with phenomenological themes provides the impetus to establishing a new understanding of being and presence that exposes significant blindspots inherent in traditional readings of both phenomenology and deconstruction In reproducing neither a stock phenomenological reaction to deconstruction nor the routine deconstructive reading of phenomenology Christopher Watkin provides a fresh assessment of the possibilities for the future of phenomenology along with a new reading of the deconstructive legacy Through detailed studies of the philosophy of Merleau Ponty Ricur and Nancy he shows how a phenomenological tradition much wider and richer than Husserlian or Heideggerean thought alone can take account of Derrida's critique of ontology and yet still hold a commitment to the ontological This new reading of being and presence fundamentally re draws our understanding of the relation of deconstruction and phenomenology and provides the first sustained discussion of the possibilities and problems for any future deconstructive phenomenology

Big Data—A New Medium? Natasha Lushetich, 2020-11-26 Drawing on a range of methods from across science and technology studies digital humanities and digital arts this book presents a comprehensive view of the big data phenomenon Big data architectures are increasingly transforming political questions into technical management by determining classificatory systems in the social educational and healthcare realms Data and their multiple arborisations have become new epistemic landscapes They have also become new existential terrains The fundamental question is can big data be seen as a new medium in the way photography or film were when they first appeared No new medium is ever truly new It's always remediation of older media What is new is the medium's re articulation of the difference between here and there before and after yours and mine knowable and unknowable possible and impossible This transdisciplinary volume incorporating cultural and media theory art philosophy history and political philosophy is a key resource for readers interested in digital humanities cultural and media studies

Enactive Cognition at the Edge of Sense-Making M. Cappuccio, T. Froese, Massimiliano Cappuccio, 2014-11-25 The enactive approach replaces the classical computer metaphor of mind with emphasis on embodiment and social interaction as the sources of our goals and concerns Researchers from a range of disciplines unite to address the challenge of how to account for the more uniquely human aspects of cognition including the abstract and the nonsensical

Enacting Musical Time Mariusz Kozak, 2020 A compelling approach among works on temporality phenomenology and the ecologies of the new sound worlds Enacting Musical Time argues that musical time is itself the site of the interaction between musical sounds and a situated embodied
