Escobedo, Wenliang Fan, 2021-08-09 Interest in the topic of structural reliability and optimal design has been rapidly growing  
in recent years Besides the field of numerical methods and artificial intelligence is experiencing a surge of new methods and  
the refinement of existing ones to expand opportunities to apply robust formulations to complex engineering problems Today  
more than ever the field is receiving fresh ideas on how to face the challenges of finding a balance between cost and benefits  
that may lead towards the optimal design of systems Recently the probability density evolution method PDEM was proposed  
by Prof Jie Li as an alternative way to obtain the stochastic and dynamic solution of the safety level of engineering systems  
under any kind of hazard This work deals with the application of this powerful method to derive optimal design  
recommendations for large engineering systems under natural hazards The three case studies illustrate to engineers and  
academic specialists how to strike a cost effective balance in designing such systems      **Rock Mechanics for Natural**
