Nature By Design People Natural Process And Ecological Design:

Nature by Design Eric Higgs, 2003-04-25 Ecological restoration is the process of repairing human damage to ecosystems. It involves reintroducing missing plants and animals, rebuilding soils, eliminating hazardous substances, ripping up roads, and returning natural processes such as fire and flooding to places that thrive on their regular occurrence. Thousands of restoration projects take place in North America every year. In *Nature by Design*, Eric Higgs argues that profound philosophical and cultural shifts accompany these projects. He explores the ethical and philosophical bases of restoration and the question of what constitutes good ecological restoration. Higgs explains how and why the restoration movement came about, where it fits into the array of approaches to human relationships with the land, and how it might be used to secure a sustainable future. Some environmental philosophers and activists worry that restoration will dilute preservation and conservation efforts and lead to an even deeper technological attitude toward nature. They ask whether even well-conceived restoration projects are in fact just expressions of human will. Higgs prefaces his responses to such concerns by distinguishing among several types of ecological restoration. He also describes a growing gulf between professionals and amateurs. Higgs finds much merit in criticism about technological restoration projects which can cause more damage than they undo. These projects often ignore the fact that changing one thing in a complex system can change the whole system. For restoration projects to be successful, Higgs argues, people at the community level must be engaged. These focal restorations bring communities together, helping volunteers develop a dedication to place and encouraging democracy. **Placing**

Nature on the Borders of Religion, Philosophy and Ethics Dr Forrest Clingerman, Mr Mark H Dixon, 2013-06-28 The natural world has been humanized; even areas thought to be wilderness bear the marks of human impact. But this human impact is not simply physical. At the emergence of the environmental movement, the focus was on human effects on nature. More recently, however, the complexity of the term nature has led to fruitful debates and the recognition of how human individuals and cultures interpret their environments. This book furthers the dialogue on religion, ethics, and the environment by exploring three interrelated concepts: to recreate, to replace, and to restore. Through interdisciplinary dialogue, the authors illuminate certain unique dimensions at the crossroads between finding value, creating value, and reflecting on one's place in the world. Each of these terms has diverse religious, ethical, and scientific connotations. Each converges on the ways in which humans both think about and act upon their surroundings. And each radically questions the damaging conceptual divisions between nature and culture, human and environment, and scientific explanation and religious ethical understanding. This book self-consciously reflects on the intersections of environmental philosophy, environmental theology, and religion and ecology, stressing the importance of how place interprets us and how we interpret place. In addition to its contribution to environmental philosophy, this work is a unique volume in its serious engagement with theology and religious studies on the issues of ecological restoration and the meaning of place. *Sustaining the West* Liza Piper, Lisa Szabo-Jones, 2015-04-06

Western Canada's natural environment faces intensifying threats from industrialization in agriculture and resource development social and cultural complicity in these destructive practices and most recently the negative effects of global climate change The complex nature of the problems being addressed calls for productive interdisciplinary solutions In this book arts and humanities scholars and literary and visual artists tackle these pressing environmental issues in provocative and transformative ways Their commitment to environmental causes emerges through the fields of environmental history environmental and ecocriticism ecofeminism ecoart ecopoetry and environmental journalism This indispensable and timely resource constitutes a sustained cross pollinating conversation across the environmental humanities about forms of representation and activism that enable ecological knowledge and ethical action on behalf of Western Canadian environments yet have global reach Among the developments in the contributors construction of environmental knowledge are a focus on the power of sentiment in linking people to the fate of nature and the need to decolonize social and environmental relations and assumptions in the West

Old World and New World Perspectives in Environmental Philosophy Martin Drenthen, Jozef Keulartz, 2014-07-28 This is the first collection of essays in which European and American philosophers explicitly think out their respective contributions and identities as environmental thinkers in the analytic and continental traditions The American European as well as Analytic Continental collaboration here bears fruit helpful for further theorizing and research The essays group around three well defined areas of questioning all focusing on the amelioration management of environmentally historically and traditionally diminished landscapes The first part deals with differences between New World and the Old World perspectives on nature and landscape restoration in general the second focuses on the meaning of ecological restoration of cultural landscapes and the third on the meaning of the wolf and of wildness It does so in a way that the strengths of each philosophical school continental and analytic comes to the fore in order to supplement the other's approach This text is open to educated readers across all disciplines particularly those interested in restoration adaptation ecology the cultural construction of place and landscape the ongoing conversation about wilderness the challenges posed to global environmental change The text may also be a gold mine for doctoral students looking for dissertation projects in environmental philosophy that are inclusive of continental and analytic traditions This text is rich in innovative approaches to the questions they raise that are reasonably well thought out The fact that the essays in each section really do resonate with one another directly is also intellectually exciting and very helpful in working out the full dimensions of each question raised in the volume

Restorative Redevelopment of Devastated Ecocultural Landscapes Robert L. France, 2016-04-19 A fusion of ecological restoration and sustainable development restorative redevelopment represents an emerging paradigm for remediating landscapes Rather than merely fixing the broken bits and pieces of nature restorative development advocates the reuse of devastated landscapes to improve the value and livability of a location for humans at the

Environmental Ethics Marion Hourdequin, 2024-01-25 What is environmental virtue Is developing good habits enough What does climate justice require Is ecological restoration just another form of the human domination of nature Exploring these questions and more this book provides an up to date and balanced introduction to environmental ethics It first examines ethical theory then ties theory to practice showing how values guide environmental policies but also how policies and institutions shape environmental values Updated and expanded to engage with the latest scholarship scientific findings and societal challenges this 2nd edition features New sections on food ethics multispecies justice intergenerational ethics and the Anthropocene Contemporary case studies focusing on the rights of nature the use of biotechnology in ecological restoration and just climate transitions Expanded coverage of diverse philosophical traditions including Confucian Daoist and Indigenous ethical perspectives Updated discussion questions further reading sections and online resources Exploring the possibilities and limitations inherent in both classical ethical models and modern theoretical approaches to the environment this is a key resource for teaching students to think ethically about the world we live in

The Nature of Design David W. Orr, 2004-10-14 The environmental movement has often been accused of being overly negative trying to stop progress The Nature of Design on the other hand is about starting things specifically an ecological design revolution

that changes how we provide food shelter energy materials and livelihood and how we deal with waste Ecological design is an emerging field that aims to recalibrate what humans do in the world according to how the world works as a biophysical system Design in this sense is a large concept having to do as much with politics and ethics as with buildings and technology The book begins by describing the scope of design comparing it to the Enlightenment of the 18th century Subsequent chapters describe barriers to a design revolution inherent in our misuse of language the clockspeed of technological society and shortsighted politics Orr goes on to describe the critical role educational institutions might play in fostering design intelligence and what he calls a higher order of heroism Appropriately the book ends on themes of charity wilderness and the rights of children Astute yet broadly appealing The Nature of Design combines theory practicality and a call to action

Courtyard Housing and Cultural Sustainability Donia Zhang, 2016-05-13 Cultural sustainability is a very important aspect of the overall sustainability framework and is regarded as the fourth pillar alongside the other three environmental economic and social sustainability However the concept is neither fully explored nor widely accepted or recognized This book elicits the interplay of nature culture architecture and theorizes the concept of cultural sustainability and culturally sustainable architecture It identifies four key themes in Chinese philosophy Harmony with Heaven Harmony with Earth Harmony with Humans and Harmony with Self along with Greek philosopher Aristotle's physics form space matter and time it sets them as criteria to evaluate the renewed and new courtyard housing projects constructed in China since the 1990s Using an innovative architectural and social science approach this book examines the political economic social and spatial factors that affect cultural sustainability Supported by a multiplicity of data including field surveys interviews with residents architects and planners time diaries drawings photos planning documents observation notes and real estate brochures the book proposes new courtyard garden house design strategies that promote healthy communities and human care for one another a concept that is universally applicable The volume is a first opportunity to take a holistic view to encompass eastern and western tangible and intangible cultures in the theorization of cultural sustainability and culturally sustainable architecture It is a comprehensive contribution to architectural theory

Beyond Naturalness David N. Cole, Laurie Yung, 2012-06-22 The central concept guiding the management of parks and wilderness over the past century has been naturalness to a large extent the explicit purpose in establishing these special areas was to keep them in their natural state But what does that mean particularly as the effects of stressors such as habitat fragmentation altered disturbance regimes pollution invasive species and climate change become both more pronounced and more pervasive Beyond Naturalness brings together leading scientists and policymakers to explore the concept of naturalness its varied meanings and the extent to which it provides adequate guidance regarding where when and how managers should intervene in ecosystem processes to protect park and wilderness values The main conclusion is the idea that naturalness will continue to provide an important touchstone for protected area conservation but that more specific goals and objectives are needed to guide stewardship The

issues considered in *Beyond Naturalness* are central not just to conservation of parks but to many areas of ecological thinking including the fields of conservation biology and ecological restoration and represent the cutting edge of discussions of both values and practice in the twenty first century This book offers excellent writing and focus along with remarkable clarity of thought on some of the difficult questions being raised in light of new and changing stressors such as global environmental climate change
