Naturoids: On The Nature Of The Artificial Massimo Negrotti, 2002-12-30 Since antiquity technology has tried to either control or imitate nature Both these traditions take advantage of the progress of science but their teleology and their typical design problems remain basically different The technology of the artificial may be defined as the effort to reproduce natural objects or processes by means of current conventional technology and materials This book reports on the results of a theoretical study of the logic characterizing any attempt to design something artificial While designers of artificial devices work in their own area facing field specific problems e g bioengineering artificial organs robotics AI ALife remakings etc the present study refers to the artificial in itself trying to find out what is common to instances very far from each other in an intrinsically interdisciplinary way The result may be defined as a proposal of a general theory of the artificial Naturoids Massimo Negrotti, 2002 Since antiquity technology has tried to either control or imitate nature Both these traditions take advantage of the progress of science but their teleology and their typical design problems remain basically different The technology of the artificial may be defined as the effort to reproduce natural objects or processes by means of current conventional technology and materials This book reports on the results of a theoretical study of the logic characterizing any attempt to design something artificial While designers of artificial devices work in their own area facing field specific problems e g bioengineering artificial organs robotics AI ALife remakings etc the present study refers to the artificial in itself trying to find out what is common to instances very far from each other in an intrinsically interdisciplinary way The result may be defined as a proposal of a general theory of the artificial **The Reality of the Artificial** Massimo

Negrotti, 2012-06-05 The human ambition to reproduce and improve natural objects and processes has a long history and ranges from dreams to actual design from Icarus's wings to modern robotics and bioengineering This imperative seems to be linked not only to practical utility but also to our deepest psychology Nevertheless reproducing something natural is not an easy enterprise and the actual replication of a natural object or process by means of some technology is impossible In this book the author uses the term naturoid to designate any real artifact arising from our attempts to reproduce natural instances He concentrates on activities that involve the reproduction of something existing in nature and whose reproduction through construction strategies which differ from natural ones we consider to be useful appealing or interesting The development of naturoids may be viewed as a distinct class of technological activity and the concept should be useful for methodological research into establishing the common rules potentialities and constraints that characterize the human effort to reproduce natural objects The author shows that a naturoid is always the result of a reduction of the complexity of natural objects due to an unavoidable multiple selection strategy Nevertheless the reproduction process implies that naturoids take on their own new complexity resulting in a transfiguration of the natural exemplars and their performances and leading to a true innovation explosion While the core performances of contemporary naturoids improve paradoxically the more a naturoid

develops the further it moves away from its natural counterpart Therefore naturoids will more and more affect our relationships with advanced technologies and with nature but in ways quite beyond our predictive capabilities The book will be of interest to design scholars and researchers of technology cultural studies anthropology and the sociology of science and technology
