Smart Computing and Self-Adaptive Systems Simar Preet Singh, Arun Solanki, Anju Sharma, Zdzislaw

Polkowski, Rajesh Kumar, 2021-12-19 The book intends to cover various problematic aspects of emerging smart computing and self adapting technologies comprising of machine learning artificial intelligence deep learning robotics cloud computing fog computing data mining algorithms including emerging intelligent and smart applications related to these research areas Further coverage includes implementation of self adaptation architecture for smart devices self adaptive models for smart cities and self driven cars decentralized self adaptive computing at the edge networks energy aware AI based systems M2M networks sensors data analytics algorithms and tools for engineering self adaptive systems and so forth Acts as guide to Self healing and Self adaptation based fully automatic future technologies Discusses about Smart Computational abilities and self adaptive systems Illustrates tools and techniques for data management and explains the need to apply and data integration for improving efficiency of big data Exclusive chapter on the future of self stabilizing and self adaptive systems of systems Covers fields such as automation robotics medical sciences biomedical and agricultural sciences healthcare and so forth This book is aimed researchers and graduate students in machine learning information technology and artificial intelligence

Foundations of Module and Ring Theory Robert Wisbauer, 2018-05-11 This volume provides a comprehensive

introduction to module theory and the related part of ring theory including original results as well as the most recent work It is a useful and stimulating study for those new to the subject as well as for researchers and serves as a reference volume Starting from a basic understanding of linear algebra the theory is presented and accompanied by complete proofs For a module M the smallest Grothendieck category containing it is denoted by $\text{mod-}M$ and module theory is developed in this category Developing the techniques in $\text{mod-}M$ is no more complicated than in full module categories and the higher generality yields significant advantages for example module theory may be developed for rings without units and also for non associative rings Numerous exercises are included in this volume to give further insight into the topics covered and to draw attention to related results in the literature

Lifting Modules John Clark, Christian Lomp, N. Vanaja, Robert

Wisbauer, 2008-08-17 Extending modules are generalizations of injective modules and dually lifting modules generalize projective supplemented modules There is a certain asymmetry in this duality While the theory of extending modules is well documented in monographs and text books the purpose of our monograph is to provide a thorough study of supplements and projectivity conditions needed to investigate classes of modules related to lifting modules The text begins with an introduction to small submodules the radical variations on projectivity and hollow dimension The subsequent chapters consider preradicals and torsion theories in particular related to small modules decompositions of modules including the exchange property and local semi T nilpotency supplements in modules with specific emphasis on semilocal endomorphism rings finishing with a long chapter on lifting modules leading up their use in the theory of perfect rings Harada rings and

quasi Frobenius rings Most of the material in the monograph appears in book form for the first time The main text is augmented by a plentiful supply of exercises together with comments on further related material and on how the theory has evolved

Berkeley Lectures on p-adic Geometry Peter Scholze, Jared Weinstein, 2020-05-26 Berkeley Lectures on p-adic Geometry presents an important breakthrough in arithmetic geometry In 2014 leading mathematician Peter Scholze delivered a series of lectures at the University of California Berkeley on new ideas in the theory of p-adic geometry Building on his discovery of perfectoid spaces Scholze introduced the concept of diamonds which are to perfectoid spaces what algebraic spaces are to schemes The introduction of diamonds along with the development of a mixed characteristic shtuka set the stage for a critical advance in the discipline In this book Peter Scholze and Jared Weinstein show that the moduli space of mixed characteristic shtukas is a diamond raising the possibility of using the cohomology of such spaces to attack the Langlands conjectures for a reductive group over a p-adic field This book follows the informal style of the original Berkeley lectures with one chapter per lecture It explores p-adic and perfectoid spaces before laying out the newer theory of shtukas and their moduli spaces Points of contact with other threads of the subject including p-divisible groups p-adic Hodge theory and Rapoport-Zink spaces are thoroughly explained Berkeley Lectures on p-adic Geometry will be a useful resource for students and scholars working in arithmetic geometry and number theory

Exercises in Modules and Rings T.Y. Lam, 2009-12-08 The idea of writing this book came roughly at the time of publication of my graduate text Lectures on Modules and Rings Springer GTM Vol 189 1999 Since that time teaching obligations and intermittent intervention of other projects caused prolonged delays in the work on this volume Only a lucky break in my schedule in 2006 enabled me to put the finishing touches on the completion of this long overdue book This book is intended to serve a dual purpose First it is designed as a problem book for Lectures As such it contains the statements and full solutions of the many exercises that appeared in Lectures Second this book is also offered as a reference and repository for general information in the theory of modules and rings that may be hard to find in the standard textbooks in the field As a companion volume to Lectures this work covers the same mathematical material as its parent work namely the part of ring theory that makes substantial use of the notion of modules The two books thus share the same table of contents with the first half treating projective injective and flat modules homological and uniform dimensions and the second half dealing with noncommutative localizations and Goldie's theorems maximal rings of quotients Frobenius and quasi Frobenius rings concluding with Morita's theory of category equivalences and dualities

Commutative Algebra: Constructive Methods Henri Lombardi, Claude Quitté, 2015-07-22 Translated from the popular French edition this book offers a detailed introduction to various basic concepts methods principles and results of commutative algebra It takes a constructive viewpoint in commutative algebra and studies algorithmic approaches alongside several abstract classical theories Indeed it revisits these traditional topics with a new and simplifying manner making the subject both accessible and innovative The algorithmic aspects of such naturally abstract topics as Galois theory Dedekind rings Pr fer rings finitely generated projective modules dimension theory of commutative rings and others in the current treatise are all analysed in the spirit of the great developers of constructive algebra in the nineteenth century This updated and revised edition contains over 350 well arranged exercises together with their helpful hints for solution A basic knowledge of linear algebra group theory elementary number theory as well as the fundamentals of ring and module theory is required Commutative Algebra Constructive Methods will be useful for graduate students and also researchers instructors and theoretical computer scientists Actions and Invariants of Algebraic Groups Walter Ricardo Ferrer Santos, Alvaro Rittatore, 2017-09-19 Actions and Invariants of Algebraic Groups Second Edition presents a self contained introduction to geometric invariant theory starting from the basic theory of affine algebraic groups and proceeding towards more sophisticated dimensions Building on the first edition this book provides an introduction to the theory by equipping the reader with the tools needed to read advanced research in the field Beginning with commutative algebra algebraic geometry and the theory of Lie algebras the book develops the necessary background of affine algebraic groups over an algebraically closed field and then moves toward the algebraic and geometric aspects of modern invariant theory and quotients
