Nonlinear Excitations In Biomolecules:

Nonlinear Excitations in Biomolecules Michel Peyrard, 2013-06-29 In the last few years hopes have emerged that simple concepts could perhaps explain the extremely complicated biomolecular processes which are known to a greater and greater accuracy thanks to the extraordinary progress of biology In parallel powerful methods in physics especially nonlinearity and cooperative effects have been developed They apply especially to biological phenomena and can explain coherent excitations with remarkable properties This book provides a pedagogical introduction to the theory of nonlinear excitations and solitons in a biological environment and also to the structure and function of biomolecules as well as energy and charge transport in biophysics

level scientific meeting on Future Directions of Nonlinear Dynamics in Physical and Biological Systems in honor of Alwyn Scott's 60th birthday December 25 1991 As preparations for the meeting proceeded they were met with an unusually broad scale and high level of enthusiasm on the part of the international nonlinear science community resulting in a participation by 168 scientists from 23 different countries in the conference which was held July 23 to August 11 1992 at the Laboratory of Applied Mathematical Physics and the Center for Modelling Nonlinear Dynamics and Irreversible Thermodynamics MIDIT of the Technical University of Denmark During the meeting about 50 lectures and 100 posters were presented in 9 working days The contributions to this present volume have been grouped into the following chapters 1 Integrability Solitons and Coherent Structures 2 Nonlinear Evolution Equations and Diffusive Systems 3 Chaotic and Stochastic Dynamics 4 Classical and Quantum Lattices and Fields 5 Superconductivity and Superconducting Devices 6 Nonlinear Optics 7 Davydov Solitons and Biomolecular Dynamics 8 Biological Systems and Neurophysics Alwyn Scott has made early and fundamental contributions to many of these different areas of nonlinear science They form an important subset of the total number of the papers and posters presented at the meeting Other papers from the meeting are being published in a special issue of *Physica D Nonlinear Phenomena*

Stochastic Dynamics Of Reacting Biomolecules Werner Ebeling, Yuri M Romanovsky, Lutz Schimansky-geier, 2003-01-29 This is a book about the physical processes in reacting complex molecules particularly biomolecules In the past decade scientists from different fields such as medicine biology chemistry and physics have collected a huge amount of data about the structure dynamics and functioning of biomolecules Great progress has been achieved in exploring the structure of complex molecules However there is still a lack of understanding of the dynamics and functioning of biological macromolecules In particular this refers to enzymes which are the basic molecular machines working in living systems This book contributes to the exploration of the physical mechanisms of these processes focusing on critical aspects such as the role of nonlinear excitations and of stochastic effects An extensive range of original results has been obtained in the last few years by the authors and these results are presented together with a comprehensive survey of the state of the art in the field

Dynamical Networks in Physics and Biology D. Beysens, G. Forgacs, 2013-06-29 The 1997 Les Houches workshop on Dynamical Network in Physics and Biology was the third in a series of meetings At the Frontier between Physics and Biology Our objective with these workshops is to create a truly interdisciplinary forum for researchers working on outstanding problems in biology but using different approaches physical chemical or biological Generally speaking the biologists are trained in the particular and motivated by the specifics while in contrast the physicists deal with generic and universal models All agree about the necessity of developing robust models The specific aim of the workshop was to bridge the gap between physics and biology in the particular field of interconnected dynamical networks The proper functioning of a living organism of any complexity requires the coordinated activity of a great number of units Units or in physical terms degrees of freedom that couple to one another typically form networks The physical or biological properties of interconnected networks may drastically differ from those of the individual units the whole is not simply an assembly of its parts as can be demonstrated by the following examples Above a certain critical concentration the metallic islands randomly distributed in an insulating matrix form an interconnected network At this point the macroscopic conductivity of the system becomes finite and the amorphous metal is capable of carrying current The value of the macroscopic conductivity typically is very different from the conductivity of the individual metallic islands

Fourth Granada Lectures in Computational Physics Pedro L. Garrido, Joaquin Marro, 2013-12-20 The methods developed to deal with the computational aspects of physical problems are useful in an increasing number of situations from chemistry biology and geology to engineering communications and economics In fact computational physics has evolved into a transdisciplinary field now concerned with the creative use of computers in scientific research More over computational methods often help students to develop a deeper understanding of key concepts and enhance their problem solving abilities Therefore computational physics is recognized as having an important educational value and educators face the task of outlining appropriate curricula to take advantage of these unique features This is an important motivation for the publication of the contents of the Seminar on Computational Physics which is held in Granada every two years The seminar aims at bringing together small groups of students and active researchers on different aspects of computational physics It is part of the doctoral programme of the University of Granada The proceedings of the previous editions were published as *II Granada Lectures in Computational Physics* World Scientific Singapore 1993 and *Third Granada Lectures in Computational Physics Lecture Notes in Physics* vol 448 Springer Berlin 1995 by the same editors The present book contains the invited lecture notes and a very brief account of contributions by participants at the 4th Granada Seminar on Computational Physics

Granada Spain 9 14 September 1996 Energy Localisation And Transfer Thierry Dauxois, Anna Litvak-hinenzon, Anna Spanoudaki, Robert S Mackay, 2004-02-09 This book provides an introduction to localised excitations in spatially discrete systems from the experimental numerical and mathematical points of view Also known as discrete breathers nonlinear lattice excitations and intrinsic localised modes these are spatially localised time periodic motions in networks of dynamical units Examples of such networks are molecular crystals biomolecules and arrays of Josephson superconducting junctions The book also addresses the formation of discrete breathers and their potential role in energy transfer in such systems Workshop on Molecular Dynamics on Parallel Computers Rüdiger Esser, 2000 Molecular dynamics is a well established technique for simulating complex many particle systems in many areas of physics chemistry and astrophysics The huge computational requirements for simulations of large systems especially with long range forces demand the use of massively parallel computers Designing efficient algorithms for these problems is a highly non trivial task This book contains the invited talks and abstracts presented at a conference by more than 100 researchers from various fields computer science solid state physics high energy physics polymers biochemistry granular materials and astrophysics Most of the contributions have been written by users of massively parallel computers and deal with practical issues but there are also contributions tackling more fundamental algorithmic problems *Voltage-Sensitive Ion Channels* H. Richard Leuchtag, 2008-12-21 The goal of this book is to explore the complexity of a microscopic bit of matter that exists in a myriad of copies within our bodies the voltage sensitive ion channel We seek to investigate the way in which these macromolecules make it possible for the long fibers of our nerve and muscle cells to conduct impulses These integral components of cell membranes are marvels of nature s evolutionary adaptation To understand them we must probe the boundaries of physics and chemistry Since function is intimately related to structure we examine the molecular structure of channels focusing on physical principles that govern all matter With the application of genetic methods our knowledge of ion channels has broadened and deepened In the hope that research can help ameliorate suffering we discuss the diseases that arise from channel malfunctions due to genetic mutations This book is intended for students and scientists who are willing to travel into uncharted waters of an interdisciplinary science We approach the subject of volta sensitive ion channels from various points of view This book seeks to give voice to the viewpoints of the physical and the biological scientist and to bridge gaps in terminology and background Readers may find this book to have both elementary and advanced aspects For the reader trained in the biological sciences it reviews background in physics and chemistry for the reader trained in the physical sciences it reviews background in physiology and biochemistry Introduction to Molecular Biophysics Jack A. Tuszynski, Michal Kurzynski, 2003-02-26 Molecular biophysics is a rapidly growing field of research that plays an important role in elucidating the mysteries of life s molecules and their assemblies as well as the relationship between their structure and function Introduction to Molecular Biophysics fills an existing gap in the literature on this subject by providing the reader with th **Computational Molecular Dynamics:**

Challenges, Methods, Ideas Peter Deuffhard, Jan Hermans, Benedict Leimkuhler, Alan E. Mark, Sebastian Reich, Robert D. Skeel, 2012-12-06 On May 21-24 1997 the Second International Symposium on Algorithms for Macromolecular Modelling was held at the Konrad Zuse Zentrum in Berlin. The event brought together computational scientists in fields like biochemistry, biophysics, physical chemistry, or statistical physics and numerical analysts as well as computer scientists working on the advancement of algorithms for a total of over 120 participants from 19 countries. In the course of the symposium, the speakers agreed to produce a representative volume that combines survey articles and original papers, all refereed to give an impression of the present state of the art of Molecular Dynamics. The 29 articles of the book reflect the main topics of the Berlin meeting, which were: i) Conformational Dynamics, ii) Thermodynamic Modelling, iii) Advanced Time Stepping Algorithms, iv) Quantum Classical Simulations and Fast Force Field, and v) Fast Force Field Evaluation.
