Nonlinear Semigroups, Partial Differential Equations and Attractors T. L. Gill, Woodford W. Zachary, 2014-01-15

Nonlinear Semigroups, Partial Differential Equations and Attractors T.L. Gill, Woodford W. Zachary, 2006-11-15 The original idea of the organizers of the Washington Symposium was to span a fairly narrow range of topics on some recent techniques developed for the investigation of nonlinear partial differential equations and discuss these in a forum of experts. It soon became clear however that the dynamical systems approach interfaced significantly with many important branches of applied mathematics. As a consequence the scope of this resulting proceedings volume is an enlarged one with coverage of a wider range of research topics. *Nonlinear Semigroups, Partial Differential Equations and Attractors* T. Nonlinear Dispersive Partial Differential Equations and Inverse Scattering Peter D. Miller, Peter A. Perry, Jean-Claude Saut, Catherine Sulem, 2019-11-14 This volume contains lectures and invited papers from the Focus Program on Nonlinear Dispersive Partial Differential Equations and Inverse Scattering held at the Fields Institute from July 31 August 18 2017. The conference brought together researchers in completely integrable systems and PDE with the goal of advancing the understanding of qualitative and long time behavior in dispersive nonlinear equations. The program included Percy Deift's Coxeter lectures which appear in this volume together with tutorial lectures given during the first week of the focus program. The research papers collected here include new results on the focusing nonlinear Schrödinger NLS equation, the massive Thirring model and the Benjamin-Bona-Mahoney equation as dispersive PDE in one space dimension as well as the Kadomtsev-Petviashvili II equation, the Zakharov-Kuznetsov equation and the Gross-Pitaevskii equation as dispersive PDE in two space dimensions. The Focus Program coincided with the fiftieth anniversary of the

discovery by Gardner Greene Kruskal and Miura that the Korteweg de Vries KdV equation could be integrated by exploiting a remarkable connection between KdV and the spectral theory of Schrodinger s equation in one space dimension This led to the discovery of a number of completely integrable models of dispersive wave propagation including the cubic NLS equation and the derivative NLS equation in one space dimension and the Davey Stewartson Kadomtsev Petviashvili and Novikov Veselov equations in two space dimensions These models have been extensively studied and in some cases the inverse scattering theory has been put on rigorous footing It has been used as a powerful analytical tool to study global well posedness and elucidate asymptotic behavior of the solutions including dispersion soliton resolution and semiclassical limits

Symposium on Nonlinear Semigroups, Partial Differential Equations and Attractors (2nd) Held in Washington, D.C. on 3-7 August 1987 Tepper Gill, Woodford W. Zachary, HOWARD UNIV WASHINGTON D C., 1987 This conference will focus on nonlinear partial and integrodifferential equations by considering them as infinite dimensional dynamical systems One day will be devoted to new classes of equations that arise via mathematical modelling of large flexible space structures Some of the topics which will be represented are Nonlinear Semigroups Dynamical Systems Attractors Reduction to Finite Dimensional Systems Inertial Manifolds Bifurcation Theory Control Theory Compensated Compactness Nonlinear Evolution Equations Reaction Diffusion Equations and Stability Analysis of PDE s **Dimensions, Embeddings, and Attractors** James C. Robinson, 2010-12-16 This accessible research monograph investigates how finite dimensional sets can be embedded into finite dimensional Euclidean spaces The first part brings together a number of abstract embedding results and provides a unified treatment of four definitions of dimension that arise in disparate fields Lebesgue covering dimension from classical dimension theory Hausdorff dimension from geometric measure theory upper box counting dimension from dynamical systems and Assouad dimension from the theory of metric spaces These abstract embedding results are applied in the second part of the book to the finite dimensional global attractors that arise in certain infinite dimensional dynamical systems deducing practical consequences from the existence of such attractors a version of the Takens time delay embedding theorem valid in spatially extended systems and a result on parametrisation by point values This book will appeal to all researchers with an interest in dimension theory particularly those working in dynamical systems *semigroup theory and applications* Phillipe Clement, 2020-12-22 This book contains articles on maximal regulatory problems interpolation spaces multiplicative perturbations of generators linear and nonlinear evolution equations integrodifferential equations dual semigroups positive semigroups applications to control theory and boundary value problems **Control Methods in PDE-Dynamical Systems** Fabio Ancona, 2007 While rooted in controlled PDE systems this 2005 AMS IMS SIAM Summer Research Conference sought to reach out to a rather distinct yet scientifically related research community in mathematics

interested in PDE based dynamical systems Indeed this community is also involved in the study of dynamical properties and asymptotic long time behavior in particular stability of PDE mixed problems It was the editors conviction that the time had become ripe and the circumstances propitious for these two mathematical communities that of PDE control and optimization theorists and that of dynamical specialists to come together in order to share recent advances and breakthroughs in their respective disciplines This conviction was further buttressed by recent discoveries that certain energy methods initially devised for control theoretic a priori estimates once combined with dynamical systems techniques yield wholly new asymptotic results on well established nonlinear PDE systems particularly hyperbolic These expectations are now particularly well reflected in the contributions to this volume which involve nonlinear parabolic as well as hyperbolic equations and their attractors aero elasticity elastic systems Euler Korteweg models thin film equations Schrodinger equations beam equations etc in addition the static topics of Helmholtz and Morrey potentials are also prominently featured A special component of the present volume focuses on hyperbolic conservation laws to take advantage of recent theoretical advances with significant implications also on applied problems in all these areas the reader will find state of the art accounts as stimulating starting points for further research

Handbook of Dynamical Systems A. Katok, B. Hasselblatt, 2005-12-17 This second half of Volume 1 of this Handbook follows Volume 1A which was published in 2002 The contents of these two tightly integrated parts taken together come close to a realization of the program formulated in the introductory survey Principal Structures of Volume 1A The present volume contains surveys on subjects in four areas of dynamical systems Hyperbolic dynamics parabolic dynamics ergodic theory and infinite dimensional dynamical systems partial differential equations Written by experts in the field The coverage of ergodic theory in these two parts of Volume 1 is considerably more broad and thorough than that provided in other existing sources The final cluster of chapters discusses partial differential equations from the point of view of dynamical systems

New Tools for Nonlinear PDEs and Application Marcello D'Abbicco, Marcelo Rempel Ebert, Vladimir Georgiev, Tohru Ozawa, 2019-05-07 This book features a collection of papers devoted to recent results in

nonlinear partial differential equations and applications It presents an excellent source of information on the state of the art new methods and trends in this topic and related areas Most of the contributors presented their work during the sessions Recent progress in evolution equations and Nonlinear PDEs at the 12th ISAAC congress held in 2017 in Västerås, Sweden Even if inspired by this event this book is not merely a collection of proceedings but a stand alone project gathering original contributions from active researchers on the latest trends in nonlinear evolution PDEs

Dynamics of Evolutionary Equations George R. Sell, Yuncheng You, 2013-04-17 The theory and applications of infinite dimensional dynamical systems have attracted the attention of scientists for quite some time Dynamical issues arise in equations that attempt to model phenomena that change with time The infinite dimensional aspects occur when forces that describe the motion depend on spatial variables or on the history of the motion In the case of spatially dependent problems the model equations are generally partial differential equations and problems that depend on the past give rise to differential delay equations Because the nonlinearities occurring in these equations need not be small one needs good dynamical theories to understand the longtime behavior of solutions Our basic objective in writing this book is to prepare an entree for scholars who are beginning their journey into the world of dynamical systems especially in infinite dimensional spaces In order to accomplish this we start with the key concepts of a semiflow and a flow As is well known the basic elements of dynamical systems such as the theory of attractors and other invariant sets have their origins here
