Wang, Nazih K. Shammass, William A. Selke, Donald B. Aulenbach, 2010-06-14 The past 30 years have seen the emergence of a growing desire worldwide that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution air water soil and noise Since pollution is a direct or indirect consequence of waste the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long as waste continues to exist we can only attempt to abate the subsequent pollution by converting it to a less noxious form Three major questions usually arise when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved This book is one of the volumes of the Handbook of Environmental Engineering series The principal intention of this series is to help readers formulate answers to the last two questions above The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control However the realization of the ever increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken Polypropylene Clive Maier, Theresa Calafut, 1998-04-15 Polypropylene The Definitive User's Guide and Databook presents in a single volume a panoramic and up to the minute user's guide for today's most important thermoplastic The book examines every aspect science technology engineering properties design processing applications of the continuing development and use of polypropylene The unique treatment means that specialists can not only find what they want but for the first time can relate to and understand the needs and requirements of others in the product development chain The entire work is underpinned by very extensive collections of property data that allow the reader to put the information to real industrial and commercial use Despite the preeminence and unrivaled versatility of polypropylene as a thermoplastic material to manufacture relatively few books have been devoted to its study Polypropylene The Definitive User's Guide and Databook not only fills the gap but breaks new ground in doing so Polypropylene is the most popular thermoplastic in use today and still one of the fastest growing Polypropylene The Definitive User's Guide and

Troughton,2008-10-17 The new edition of this bestselling reference provides fully updated and detailed descriptions of plastics joining processes plus an extensive compilation of data on joining specific materials The volume is divided into two main parts processes and materials The processing section has 18 chapters each explaining a different joining technique The materials section has joining information for 25 generic polymer families Both sections contain data organized according to the joining methods used for that material A significant and extensive update from experts at The Welding Institute A systematic approach to discussing each joining method including process advantages and disadvantages applications materials equipment joint design and welding parameters Includes international suppliers directory and glossary of key joining terms Includes new techniques such as flash free welding and friction stir welding Covers thermoplastics thermosets elastomers and rubbers

Medical Textiles Subhash C. Anand,2001-02-28 Medical textiles is one of the major growth areas within technical textiles and the use of textile materials for medical and healthcare products ranges from simple gauze or bandage materials to scaffolds for tissue culturing and a large variety of prostheses for permanent body implants Recent advances include The development of polylactic acid and polyglycolic acid fibres as structures for cell growthTemporary bioresorbable textile supports for growing human organic tissueThe development of smart fibres based on naturally occurring polymers and also on non animal based protein fibres and structures for the treatment of wounds and ulcersThese are a few examples of the wide range of textile based non implantable and implantable products used in medicine and surgery and covered in this cutting edge collection of the latest research in this fascinating area *Mechanics of Advanced*

Materials Vadim V. Silberschmidt,Valery P. Matveenko,2015-04-09 The book presents interesting examples of recent developments in this area Among the studied materials are bulk metallic glasses metamaterials special composites piezoelectric smart structures nonwovens etc The last decades have seen a large extension of types of materials employed in various applications In many cases these materials demonstrate mechanical properties and performance that vary significantly from those of their traditional counterparts Such uniqueness is sought or even specially manufactured to meet increased requirements on modern components and structures related to their specific use As a result mechanical behaviors of these materials under different loading and environmental conditions are outside the boundaries of traditional mechanics of materials presupposing development of new characterization techniques theoretical descriptions and numerical tools The book presents interesting examples of recent developments in this area Among the studied materials are bulk metallic glasses metamaterials special composites piezoelectric smart structures nonwovens etc
