Nuclear Localization Of Growth Factors And Of Monoclonal Antibodies:

Nuclear Localization of Growth Factors and of Monoclonal Antibodies Ewa Rakowicz-Szulczynska,1993-10-13 Nuclear Localization of Growth Factors and of Monoclonal Antibodies focuses on how an additional class of chromatin receptors is directly involved in mediation of the action of growth factors on the gene regulation level The book describes a new intracellular pathway of growth factors and presents methods for identifying nuclear antigens with an epitopic homology of the cell surface antigens It teaches how to distinguish monoclonal antibodies that penetrate the cell and localize in the nucleus from those that act only on the cell surface New light is shed on the mechanisms of malignant transformation and new approaches to developing anti cancer and anti HIV drugs are covered The book will be important for oncologists biochemists cell biologists pharmaceutical researchers investigative pathologists neurochemists and immunologists

Signaling Pathways in Squamous Cancer Adam B. Glick,Carter Van Waes,2010-11-25 Squamous epithelia form the lining surface of tissues in contact with the environment the skin oral mucosa esophagus and respiratory tract the genital tract and several other specialized tissues These tissues are at highest risk for exposure to environmental carcinogens such as UV tobacco smoke and infectious agents Cancers that form in squamous epithelia are among the most common human solid tumors and have high morbidity and mortality These cancers include squamous cell carcinoma of the skin oral cancer head and neck and esophageal cancer certain lung cancers and cervical cancer We propose to organize the book so that the early chapters will focus on individual pathways and more specific mechanisms in both normal function and cancer while the later chapters will be more integrative and include overviews of biomarkers and therapeutic development This should increase interest for clinically oriented researchers All authors will be encouraged to provide a balanced review in addition to highlighting their own work *The FOS and JUN Families of Transcription Factors* Peter E. Angel,Peter

Herrlich,1994-09-29 This book introduces and analyzes the crucial role of AP 1 in cell growth proliferation differentiation and apoptosis AP 1 is the endpoint of several pathways of signal transduction including one that triggers cancerous growth The control of its activity is an issue of basic science cancer therapy and other diseases The chapters provide multiple viewpoints of the emerging data on AP 1 including its role as a factor regulating genes involved in the metastatic properties of cancer as a factor that interacts with viral gene products and as a part of the mechanism by which steroid and retinoic acid receptors function as anti inflammatory proteins Drug Discovery and Design ,2001-04-18 Strategies to reduce medical uncertainty

and build evidence have become critical to the advancement of medical knowledge and modern medical practice As new techniques and strategies have arisen so has the need for a current reference work Drug Discovery and Design examines the latest research in the development of these new strategies Some of the topics covered include angiotensin converting enzyme inhibitors HIV protease inhibitors PPAR agonists for diabetes and glucan synthase antifungal agents Theranostics, Gallium-68, and Other Radionuclides Richard P. Baum, Frank Rösch,2012-08-23 This book is based on contributions

presented at the 1st World Congress on Gallium 68 and Peptide Receptor Radionuclide Therapy which examined recent developments in theranostics the emerging field of molecular targeting of vectors that can be used for both diagnosis and therapy when modified accordingly The focus of this book is on the rapidly developing research into and clinical applications of gallium 68 and other generator produced PET radionuclides in the personalized diagnosis and treatment of neuroendocrine tumors and other diseases In addition new PET radiopharmaceuticals are considered and the latest ideas and concepts presented Theranostics embodies both molecular and personalized medicine It is at the cutting edge of medicine and the contents of this volume will be of interest to chemists physicians and investigators dealing with generators PET radiochemistry molecular imaging and radionuclide therapy *Diagnostic Procedures in Pancreatic Disease* P.

Malfertheiner, J.E. Dominguez-Munoz, H.-U. Schulz, Hans Lippert, 2012-12-06 A decade of diagnostic efforts in pancreatic diseases 1985 1995 The diagnostic access to the pancreas was revolutionized two decades ago by the advent of endoscopic retrograde pancreatography ultrasound and computed tomography The hidden organ was made visible by these diagnostic milestones In a process of slow but continuous evolution these imaging techniques have been further refined and complemented by nuclear magnetic resonance imaging and together they provide the standards on which therapeutic decisions depend Progress has also been made in the functional assessment of the pancreas in various conditions of disease such as acute pancreatitis chronic pancreatitis and cancer New developments in molecular biology also promise more significant achievements in the near future Ten years ago we gathered a panel of international specialists dedicated to the study and management of pancreatic diseases and invited them to share their experiences with the available diagnostic methods We have now repeated this process in order to review the past decade of progress in diagnostic procedures in pancreatic disease and to update the current state of expertise and stimulate further developments The concept of the meeting held in Magdeburg in December 1995 was to individually analyze the different diagnostic procedures and their specific use in the different disease conditions The rationale for the interpretation of diagnostic findings is derived from the understanding of basic physiological and pathophysiological events and the resultant morphological alterations **Renin**

Angiotensin System and the Heart Walmor C. De Mello, 2004-04-30 Recent studies have shown that the heart possesses an intrinsic renin angiotensin system that is controlled by tissue specific parameters that are activated by biomechanical stress This book reviews the latest information on the way in which both the plasma and cardiac renin angiotensin systems affect heart function It covers the cell and molecular biology of these systems with contributions on renin synthesis uptake and the intracellular signalling pathways Particular insight comes from transgenic mouse models in which either mouse or human genes for various components of the renin angiotensin system are expressed Other topics covered include wound healing as well as the trophic effects of aldosterone Contains the most recent findings on the renin angiotensin system and the heart Written by an international team of distinguished scientists Covers both the cellular and molecular basis of the

renin angiotensin system and the clinical relevance of this research **Protein Phosphorylation in Human Health** Cai Huang, 2012-09-06 15 chapters on protein phosphorylation and human health written by expert scientists Covers most important research hot points such as Akt AMPK and mTOR Bridges the basic protein phosphorylation pathways with human health and diseases Detailed and comprehensive text with excellent figure illustration **CNS Cancer** Erwin G. Van Meir, 2009-08-15 Cancers of the central nervous system are among the most lethal of human neoplasms They are recalcitrant to even intensive multimodality therapies that include surgery radiotherapy and chemotherapy Moreover especially in children the consequences of these therapies can itself be devastating and involve serious cognitive and developmental disorders It is small wonder that such cancers have come under the intense scrutiny of each of the subspecialties of clinical care and investigation as well as attracting some of the best basic research scientists Their joint efforts are gradually peeling away the mysteries surrounding the genesis and progression of these tumors and inroads are being steadily made into understanding why they resist therapies This makes it an especially opportune time to assemble some of the best investigators in the field to review the state of the art in the various arenas that comprise the assault on CNS tumors The breadth of this effort by the clinical and basic neuro oncology community is quite simply amazing To a large extent it evolves from the knowledge of the human genome and its regulation that has been hard won over the past two decades

Tissue-Specific Vascular Endothelial Signals and Vector Targeting, Part B, 2010-10-27 The field of genetics is rapidly evolving and new medical breakthroughs are occurring as a result of advances in knowledge gained from genetics research This serial continually publishes important reviews of the broadest interest to geneticists and their colleagues in affiliated disciplines Includes important reviews of the broadest interest to geneticists and their colleagues in affiliated disciplines providing researchers an overview and synthesis of the latest findings in the area Presents up to date research from leaders in the field *Cumulative Subject Index*, 1998-10-19 This Series provides a comprehensive survey of the major topics in the field of developmental biology The volumes are valuable to researchers in animal and plant development as well as to students and professionals who want an introduction to cellular and molecular mechanisms of development The Series has recently passed its 30 year mark making it the longest running forum for contemporary issues in developmental biology
