Compiled, Edited and Translated by J.A. Gray, Etc. [By B.M. Teplov, J.A. Gray and Others.]. Jeffrey Alan Gray, Boris Mikhailovich TEPLOV, 1964 *Pavlov's Typology* J. A. Gray, H. J. Eysenck, 2017-01-31 International Series of Monographs on

Experimental Psychology Volume 1 Pavlov's Typology presents problems of personality and the theoretical framework done in the U S S R Part 1 of this book deals with the development of Pavlov's theory of personality on experiments conducted on dogs and the problems encountered in studies of higher nervous activity in man and animals These tests include investigation into the capacity of cortical cells of the test subject the speed of movement and termination of the nervous process and the speed of formation of positive and negative conditioned connections Part 2 is the application of Pavlov's theory of types to individual differences in human beings This part emphasizes that when using data from Pavlov's studies of animals typological differences are considered when applied in man that experimental methods are to be improved and that operations definitions and concepts can change Part 3 concerns experiments from Teplov's laboratory on the dimension of strength of the nervous systems in human beings This strength is shown from the working capacity of nerve cells as 1 the strength of excitation the nerve cell can endure when a stimulus acts on it in a single time and 2 the time that the nerve cell can endure prolonged stimulus or at shorter but frequent intervals The conclusions observed in strong subjects and weak subjects are then analyzed This book can be appreciated by psychiatrists psychologists behavioral scientists and students and professors in psychology *Pavlov's Typology* Jeffrey Alan Gray, 1983 *Foundations of Personality* P.J. Hettema, Ian J. Deary, 2013-11-11 Differences between people are a fascinating and long standing area of psychological inquiry However previous research has largely been confined to studies at the descriptive level This book tries to explain individual difference rather than merely describe them Explanations are derived from two major competing frameworks the biological and social approaches to individuality The book is based on the contributions of specialists from Europe and North America invited to represent the biological and social points of view Thus a direct confrontation is obtained of two approaches that hitherto have proceeded with virtually no reference to each other Attention is paid to behavior genetics psychophysiology and temperament as well as to social learning behavioral strategies and person environment interactions Differences and commonalities between the biological and social approaches are scrutinized and a common framework is outlined to stimulate future research Due to its innovative character the book is particularly relevant for investigators in the field In addition it may be fruitfully used in advanced graduate level courses in personality psychology **Intelligence and Personality** Janet M. Collis, Samuel J. Messick, Ulrich Schiefele, 2012-10-12 This volume brings together leading researchers in a major new effort to bridge the historical gap between the domains of ability and personality The result is a remarkable

collection of chapters analyzing critical issues at the interface style structure process and context Contributors address intelligence and its relation to temperament and character hierarchical models of cognition and personality judgmental data in personality research and structural issues in ability and personality intelligence and conation goal theories the role of conation in the learning environment motivation and arousal intelligence and style stylistic preferences the role of disposition cognitive style and its measurement test taking style and intelligence and personality in context regularities of functioning contextual effects in cultural variation control and consistency the concept of successful intelligence **Animal Models for**

Psychiatry J. D. Keehn, 2018-02-19 Originally published in 1986 in this work Professor Keehn assesses the contributions of experimental psychology and ethology to psychiatric theory and practice at the time He discusses the status of animals in psychopathology and describes a number of animal clinical pictures covering both abnormal movements and convulsions and spontaneous behavioural disorders He also includes animal models of such psychiatric illnesses as neurosis psychosis drug addiction and disorders of childhood and examines the nature of mental illness and the status of psychiatric diagnosis The book includes an evaluation of the ethics of experimental research with animals and a summary of humane experimental procedures Animal Models for Psychiatry will be of special interest to psychiatrists clinical and physiological psychologists behavioural pharmacologists and to veterinarians **Psychology Library Editions: Comparative Psychology** Various

Authors, 2022-07-30 Psychology Library Editions Comparative Psychology 16 Volume set brings together a number of titles which explore animal behaviour and learning some in isolation but mostly comparing it with human behaviour Research in this area looks at many different issues using various methods and examines species from insects to primates The series of previously out of print titles originally published between 1928 and 1997 with the majority from the 1970s and 1980s includes contributions from many highly respected authors Dog Behaviour, Evolution, and Cognition Adam

Miklosi, 2014-12-11 This is the first book to collate and synthesize the recent burgeoning primary research literature on dog behaviour evolution and cognition The author presents a new ecological approach to the understanding of dog behaviour demonstrating how dogs can be the subject of rigorous and productive scientific study without the need to confine them to a laboratory environment This second fully updated edition of Dog Behaviour Evolution and Cognition starts with an overview of the conceptual and methodological issues associated with the study of the dog followed by a brief description of their role in human society An evolutionary perspective is then introduced with a summary of current research into the process of domestication The central part of the book is devoted to issues relating to the cognitive aspects of behaviour which have received particular attention in recent years from both psychologists and ethologists The book's final chapters introduce the reader to many novel approaches to dog behaviour set in the context of behavioural development and genetics This second edition recognises and discusses the fact that dogs are increasingly being used as model organisms for studying aspects of human biology such as genetic diseases and ageing Specific attention is also given in this edition to attachment behaviour

which emerges between humans and dogs the importance of inter specific communication in the success of dogs in human communities and the broad aspects of social cognition and how this may contribute to human dog cooperation Directions for future research are highlighted throughout the text which also incorporates links to human and primate research by drawing on homologies and analogies in both evolution and behaviour The book will therefore be of relevance and use to anyone with an interest in behavioural ecology including graduate students of animal behaviour and cognition as well as a more general audience of dog enthusiasts biologists psychologists veterinarians and sociologists
