River Management:

River Channel Management Peter Downs, Ken Gregory, 2014-02-24 River Channel Management is the first book to deal comprehensively with recent revolutions in river channel management. It explores the multi-disciplinary nature of river channel management in relation to modern management techniques that bear the background of the entire drainage basin in mind, use channel restoration where appropriate and are designed to be sustainable. River Channel Management is divided into five sections. The Introduction outlines the need for river channel management. Retrospective Review offers an overview of twentieth-century engineering methods and the ways that river channel systems operate. Realisation explains how greater understanding of river channel adjustments, channel hazards and river basin planning created a context for twenty-first-century management. Requirements for Management explains and examines environmental assessment, restoration-based approaches and methods that work towards design with nature. Final Revision speculates about prospects for twenty-first-century river channel management. River Channel Management is written for higher-level undergraduates and for postgraduates in geography, ecology, engineering, planning, geology and environmental science, for professionals involved in river channel management and for staff in environmental agencies.

River Conservation and Management Philip Boon, Paul Raven, 2012-02-10 This book is intended for those with an academic, scientific and practical interest in river conservation and management. It provides an overview of how changes in legislation, policies, institutional responsibilities, science, technology, practical techniques and public perception have influenced how rivers have been managed over the past 20 years and the challenges that lie ahead during the next 20 years. The book is based on the international conference River Conservation and Management 20 Years On, held at York. Thirty-one chapters with contributions from North and South America, Europe, Asia and Australasia provide a wide-ranging perspective on this complex but profoundly important subject. Following an introduction that chronicles the most important contextual changes, the book is organized into four broad topics: Catchment management, ecosystem integrity and the threats to river ecosystems; this covers progress on understanding and addressing the pressures affecting rivers, many of which will be amplified by climate change and increasing human demands for water; Methods and approaches illustrating some recent techniques that have been developed to assess condition and conservation status across different types of river; Recovery and rehabilitation providing an insight into the principles, practice, public involvement and institutional networks that support and make improvements to modified river reaches; Integrating nature conservation into wider river management demonstrating the importance of integrated planning, involvement of local communities and the use of adaptive management in achieving multiple environmental and economic benefits along rivers used for different purposes. The final chapter discusses the challenges faced in dealing with an uncertain future. More than 1200 different references and numerous web site citations provide the reader with an invaluable source of knowledge on the subject area.

Missouri River Planning National Research Council, Division on Earth and Life Studies, Water Science and

Technology Board, Committee on Missouri River Recovery and Associated Sediment Management Issues, 2011-03-24

Historically the flow of sediment in the Missouri River has been as important as the flow of water for a variety of river functions. The sediment has helped form a dynamic network of islands, sandbars, and floodplains and provided habitats for native species. Further downstream, sediment transported by the Missouri and Mississippi Rivers has helped build and sustain the coastal wetlands of the Mississippi River delta. The construction of dams and river bank control structures on the Missouri River and its tributaries, however, has markedly reduced the volume of sediment transported by the river. These projects have had several ecological impacts, most notably on some native fish and bird species that depended on habitats and landforms created by sediment flow. Missouri River Planning describes the historic role of sediment in the Missouri River, evaluates current habitat restoration strategies, and discusses possible sediment management alternatives. The book finds that a better understanding of the processes of sediment transport, erosion, and deposition in the Missouri River will be useful in furthering river management objectives such as protection of endangered species and development of water quality standards.

Guidelines for Mainstreaming Natural River Management in Water Sector Investments Asian Development Bank, 2021-09-01. The natural river management (NRM) approach is designed to harness the natural functions of river systems so they sustainably provide important services such as water supply and flood and drought management. Drawing heavily on the concepts of ecosystem services, integrated water resources management, and integrated river basin management, NRM aims to harmonize nature-based solutions and nonstructural measures with engineering interventions. This publication explains the value of NRM and provides step-by-step guidance on how the approach can be systematically integrated into water sector investments.

An Introduction to River Management Richard Bailey, 1991. *The Social Side of River Management* W. T. de Groot, Jeroen Warner, 2011. River management faces many challenges world-wide, including climate change, flood risks, and the demand for more adaptive and ecosystem-based systems. Instead of raising the dikes even higher, the new adage for river managers is to give the rivers more space to drain their waters. This, in turn, implies that river management will become a social business with strong involvement of local communities. This book offers various examples and theories on how to avoid conflict and enter into fruitful relationships with river communities.

River Conservation Directory, 1990. River Dynamics and Integrated River Management Zhao-Yin Wang, Joseph H.W. Lee, Charles S.

Melching, 2014-09-24. River Dynamics and Integrated River Management provides comprehensive information on rivers for integrated management, including natural processes, stresses resulting from human activities, and restoration of various parts of the river basin, including the watershed, mountain streams, alluvial rivers, estuaries, and natural and man-made lakes. Essential concepts, traditional and modern, such as river patterns, step pool systems, vegetation, erosion, charts, habitat diversity, and flushing times of bays are clearly defined, physically explained, and illustrated with figures and pictures. Detailed mathematics and rigorous analyses are avoided so as to facilitate a holistic view of the subject of integrated river management. Researchers

can easily familiarize themselves with the science of river management in its widest sense with the impressive pictures and examples in this book Dr Zhaoyin Wang is a professor at the Department of Hydraulic Engineering Tsinghua University China Dr Joseph H W Lee is a Chair Professor at the Department of Civil and Environmental Engineering The Hong Kong University of Science Technology China Dr Charles S Melching is a Professor at the College of Engineering Marquette University Milwaukee WI USA

Making Space for the River Jeroen Frank Warner, Arwin van Buuren, Jurian Edelenbos, 2012-11-01 This book examines recent developments in river flood management from the viewpoint of Making Space for the River and the resulting challenges for water governance Different examples from Europe and the United States of America are discussed that aim to green rivers including increasing river discharge for flood management enhancing natural and landscape values promoting local or regional economic development and urban regeneration Making Space for the River presents not only opportunities and synergies but also risks as it crosses established institutional boundaries and touches on multiple stakeholder interests which can easily clash Making Space for the River helps the reader to understand the policy and governance dynamics that lead to these tensions and pays attention to a variety of attempts to organize effective and legitimate governance approaches The book helps to realize connections between policy domains problem frames and goals of different actors at different levels that contribute to decisive and legitimate action Making Space for the River has an international comparative character that sheds light upon both the country specific governance dilemmas which relate to specific state traditions and institutional characteristics of national water management but also uncovers interesting similarities which provide us with building blocks to formulate more generic lessons about the governance of Making Space for the River in different institutional and social contexts The authors of this book come from a variety of disciplines including public administration town and country planning geography and anthropology and these different disciplines bring multiple ways of knowing and understanding of Making Space for the River programs The book combines interdisciplinary scientific analyses of Space for the River projects and programs with practical knowing and lessons drawing Making Space for the River is written for both practitioners and scholars and students of environmental policy spatial planning land use and water management Editors Jeroen Warner Assistant Professor of Disaster Studies Wageningen University The Netherlands Arwin van Buuren Associate Professor of Public Administration Erasmus University Rotterdam The Netherlands Jurian Edelenbos Professor of Public Administration Erasmus University Rotterdam The Netherlands
