

Causes of Chronic Headaches

1

Overactive Nerve:

Your head-brain messenger (trigeminal nerve) can go haywire, causing pain.

2

Tense Muscles:

Stress, bad posture, and eye strain can knot up your head and neck, leading to headaches.

3

Genetic Link:

Some headaches, like migraines, run in the family.

4

Medication Misstep:

Overusing pain relievers can actually worsen headaches in the long run.

5

Hidden Medical Issues:

Sinus infections, brain tumors, and even nerve damage can cause persistent pain.

6

Hormonal Rollercoaster:

Fluctuations like those during menstrual cycles, pregnancy, or menopause can trigger headaches.

The author has written an easily accessible summary of neuropsychological tests neuropsychiatric disorders and the relationships of test

performance to disorder and treatment strategy This ready reference provides neuropsychologists with an understanding of the medical context within which neuropsychological evaluation and psychosocial therapy takes place *Medical Factors and Psychological Disorders* Alan S. Bellack, R.L. Morrison, 2012-12-06 Throughout the last decade the field of clinical psychology has expanded dramatically Clinical psychologists are involved in the treatment and research of a wider range of problems and disorders than they have ever been before Evidence has been rapidly accumulating regarding the role of psychological variables and stress in the etiology and maintenance of a range of medical and psychiatric disorders New models of psychotherapy have been developed and refined and the specific efficacy of psychotherapeutic interventions for an increasing number of disorders or subtypes of disorders has been documented However concurrent with research that demonstrates the impact of psychosomatic factors in various disorders and the efficacy of psychological or psychosocial interventions dramatic progress has been made with regard to the investigation of biological factors that may mediate certain disorders That physical factors may underlie many instances of psychiatric illness has been repeatedly demonstrated Also the efficacy of somatic treatments for different disorders or for subtypes of disorders has been reported with increasing methodological rigor **Handbook of Prescriptive Treatments for Adults** Robert T. Ammerman, Michel

Hersen, 2013-11-11 This book could not have been conceptualized or published 20 years ago Indeed it is doubtful that we could have organized the material for this handbook 10 years ago Over the last 20 years however the painstaking efforts of many clinical researchers working with a variety of resistive psychopathologies have resulted in specific psychotherapies and pharmacotherapies that are effective with a significant proportion of patients at least for some of the disorders Much clinical research remains to be carried out in the forthcoming decades But now that we are nearing the 21st century at least some statement about efficacy can be made In 1967 Gordon Paul succinctly stated that the ultimate goal of treatment outcome research is to determine What treatment by whom is most effective for this individual with that specific problem and under which set of circumstances p 111 At that time empirical evaluations of psychosocial and pharmacologic treatments were few and far between Methodological strategies for determining treatment effectiveness were also in the formative stage as exemplified by introduction of control groups that received inactive interventions i e placebo and the relatively recent practice of comparing two or more treatments in addition to placebo In the almost three decades since Paul's oft quoted dictum both the quantity and the quality of treatment outcome research with adults have increased dramatically
