Naive Semantics For Natural Language Understanding:

Naive Semantics for Natural Language Understanding Kathleen Dahlgren, 2012-12-06 This book introduces a theory Naive Semantics NS a theory of the knowledge underlying natural language understanding The basic assumption of NS is that knowing what a word means is not very different from knowing anything else so that there is no difference in form of cognitive representation between lexical semantics and encyclopedic knowledge NS represents word meanings as commonsense knowledge and builds no special representation language other than elements of first order logic The idea of teaching computers common sense knowledge originated with McCarthy and Hayes 1969 and has been extended by a number of researchers Hobbs and Moore 1985 Lenat et al 1986 Commonsense knowledge is a set of naive beliefs at times vague and inaccurate about the way the world is structured Traditionally word meanings have been viewed as criterial as giving truth conditions for membership in the classes words name The theory of NS in identifying word meanings with commonsense knowledge sees word meanings as typical descriptions of classes of objects rather than as criterial descriptions Therefore reasoning with NS representations is probabilistic rather than monotonic This book is divided into two parts Part I elaborates the theory of Naive Semantics Chapter 1 illustrates and justifies the theory Chapter 2 details the representation of nouns in the theory and Chapter 4 the verbs originally published as Commonsense Reasoning with Verbs McDowell and Dahlgren 1987 Chapter 3 describes kind types which are naive constraints on noun representations

Knowledge Representation and the Semantics of Natural Language Hermann Helbig, 2005-12-19 Natural Language is not only the most important means of communication between human beings it is also used over historical periods for the preservation of cultural achievements and their transmission from one generation to the other During the last few decades the flood of digitalized information has been growing tremendously This tendency will continue with the globalization of information societies and with the growing importance of national and international computer networks This is one reason why the theoretical understanding and the automated treatment of communication processes based on natural language have such a decisive social and economic impact In this context the semantic representation of knowledge originally formulated in natural language plays a central part because it connects all components of natural language processing systems be they the automatic understanding of natural language analysis the rational reasoning over knowledge bases or the generation of natural language expressions from formal representations This book presents a method for the semantic representation of natural language expressions texts sentences phrases etc which can be used as a universal knowledge representation paradigm in the human sciences like linguistics cognitive psychology or philosophy of language as well as in computational linguistics and in artificial intelligence It is also an attempt to close the gap between these disciplines which to a large extent are still working separately

Environments: Techniques, Methods, and Applications Rech, Jörg, Decker, Björn, Ras, Eric, 2008-06-30 Today's work is characterized by a high degree of innovation and thus demands a thorough overview of relevant knowledge in the world and in organizations Semantic Work Environments support the work of the user by collecting knowledge about needs and providing processed and improved knowledge to be integrated into work Emerging Technologies for Semantic Work Environments Techniques Methods and Applications describes an overview of the emerging field of Semantic Work Environments by combining various research studies and underlining the similarities between different processes issues and approaches in order to provide the reader with techniques methods and applications of the study

Connectionist

Approaches to Natural Language Processing R G Reilly, Noel Sharkey, 2016-07-22 Originally published in 1992 when connectionist natural language processing CNLP was a new and burgeoning research area this book represented a timely assessment of the state of the art in the field It includes contributions from some of the best known researchers in CNLP and covers a wide range of topics The book comprises four main sections dealing with connectionist approaches to semantics syntax the debate on representational adequacy and connectionist models of psycholinguistic processes The semantics and syntax sections deal with a variety of approaches to issues in these traditional linguistic domains covering the spectrum from pure connectionist approaches to hybrid models employing a mixture of connectionist and classical AI techniques The debate on the fundamental suitability of connectionist architectures for dealing with natural language processing is the focus of the section on representational adequacy The chapters in this section represent a range of positions on the issue from the view that connectionist models are intrinsically unsuitable for all but the associationistic aspects of natural language to the other extreme which holds that the classical conception of representation can be dispensed with altogether The final section of the book focuses on the application of connectionist models to the study of psycholinguistic processes This section is perhaps the most varied covering topics from speech perception and speech production to attentional deficits in reading An introduction is provided at the beginning of each section which highlights the main issues relating to the section topic and puts the constituent chapters into a wider context

Computational and Conversational Discourse Eduard H. Hovy, Donia R.

Scott, 2013-06-29 People engage in discourse every day from writing letters and presenting papers to simple discussions Yet discourse is a complex and fascinating phenomenon that is not well understood This volume stems from a multidisciplinary workshop in which eminent scholars in linguistics sociology and computational linguistics presented various aspects of

discourse The topics treated range from multi party conversational interactions to deconstructing text from various perspectives considering topic focus development and discourse structure and an empirical study of discourse segmentation The chapters not only describe each author s favorite burning issue in discourse but also provide a fascinating view of the research methodology and style of argumentation in each field

Spatial Information Theory Max J. Egenhofer, Nicholas Giudice, Reinhard Moratz, Michael Worboys, 2011-08-30 This book constitutes the refereed proceedings of the 10th International Conference on Spatial Information Theory COSIT 2011 held in Belfast ME USA in September 2011 The 23 revised full papers were carefully reviewed and selected from 55 submissions They are organized in topical sections on maps and navigation spatial change spatial reasoning spatial cognition and social aspects of space perception and spatial semantics and space and language

New Concepts in Natural Language Generation Helmut Horacek, 2015-12-17 This book aims to inform researchers with an interest in natural language generation about advances in the field It is organised around four topics system architectures content planning discourse planning and realisation in linguistic form and it presents some of the most important works in this area of research

Cognitive Modeling and Verbal Semantics Andrea C. Schalley, 2011-05-03 This book presents a unique approach to the semantics of verbs It develops and specifies a compositional representation framework for verbal semantics that is based on the Unified Modeling Language UML the graphical lingua franca for the design and modeling of object oriented systems in computer science The new framework combines formal precision with conceptual flexibility and allows the representation of very complicated details of verbal meaning using a mixture of graphical elements as well as linearized constructs Thereby it offers a solution for different semantic problems such as context dependency and polysemy The latter for instance is demonstrated in one of the two well elaborated applications of the framework within this book the investigation of the polysemy of German setzen Besides the formal specification of the framework the book comprises a cognitive interpretation of important modeling elements discusses general issues connected with the framework such as dynamic and static aspects of verbal meanings questions of granularity and general constraints applying to verbal semantics Moreover first steps towards a compositional semantics are undertaken and a new verb classification based on this graphical approach is proposed Since the framework is graphical in nature the book contains many annotated figures and the framework s modeling elements are illustrated by example diagrams Not only scholars working in the field of linguistics in particular in semantics will find this book illuminating because of its new graphical approach but also researchers of cognitive science computational linguistics and computer science in general will surely appreciate it

Reversible Grammar in Natural Language Processing T. Strzalkowski, 2012-12-06 Reversible grammar allows computational models to be built that are equally well suited for the analysis and generation of natural language utterances This task can be viewed from very different perspectives by theoretical and computational linguists and computer scientists The papers in this volume present a broad range of

approaches to reversible bi directional and non directional grammar systems that have emerged in recent years This is also the first collection entirely devoted to the problems of reversibility in natural language processing Most papers collected in this volume are derived from presentations at a workshop held at the University of California at Berkeley in the summer of 1991 organised under the auspices of the Association for Computational Linguistics This book will be a valuable reference to researchers in linguistics and computer science with interests in computational linguistics natural language processing and machine translation as well as in practical aspects of computability
