Hufford, 2015-05-05 David Hufford's work exploring the experiential basis for belief in the supernatural focusing here on the so called Old Hag experience a psychologically disturbing event in which a victim claims to have encountered some form of malign entity while dreaming or awake. Sufferers report feeling suffocated held down by some force paralyzed and extremely afraid. The experience is surprisingly common the author estimates that approximately 15 percent of people undergo this event at some point in their lives. Various cultures have their own name for the phenomenon and have constructed their own mythology around it. The supernatural tenor of many Old Hag stories is unavoidable. Hufford as a folklorist is well placed to investigate this puzzling occurrence. *Sleep Disorders and Sleep Promotion in Nursing Practice* Nancy Redeker, Geoffrey Phillips McEnany, 2011-04-22 2011 AJN Book of the Year Winner in Gerontologic Nursing. Roth,1981-01-27 *The Sleep of Others and the Transformation of Sleep Research* Kenton Kroker,2007-12-15 We tend to think of sleep as a private concern a night time retreat from the physical world into the realm of the subconscious Yet sleep also has a public side it has been the focal point of religious ritual philosophic speculation political debate psychological research and more recently neuroscientific investigation and medical practice In this first ever history of sleep research Kenton Kroker draws on a wide range of material to present the story of how an investigative field at one time dominated by the study of dreams slowly morphed into a laboratory based discipline The result of this transformation Kroker argues has changed the very meaning of sleep from its earlier conception to an issue for public health and biomedical intervention Examining a vast historical period of 2500 years Kroker separates the problems associated with the history of dreaming from those associated with sleep itself and charts sleep related diseases such as narcolepsy insomnia and sleep apnea He describes the discovery of rapid eye movement REM during the 1950s and shows how this discovery initiated the creation of dream laboratories that later emerged as centres for sleep research during the 1960s and 1970s Kroker s work is unique in subject and scope and will be enormously useful for both sleep researchers medical historians and anybody who s ever lost a night s sleep

Narcolepsy Meeta Goswami, Seithikurippu Ratnas Pandi-Perumal, Michael J. Thorpy, 2011-04-08 Narcolepsy serves as a prototype of how the interaction of high quality clinical research and groundbreaking basic science can collaborate to define the cause of a disease and change forever how we evaluate and treat it There is scarcely a topic in this book that would have been covered in the same way 10 years ago as it is discussed today We are also fortunate that many of the players in this dramatic turnaround have contributed to this volume so that the result is a tapestry of the events that have transformed the field over the last decade that is both authentic and detailed The first section of the book provides much of the basic science background As described in the first two chapters the dramatic convergence of lines of evidence from two different laboratories first demonstrated in 1999 that narcolepsy is a disease of loss of neurotransmission by lateral hypothalamic neurons making the peptides that have been called orexins or hypocretins These findings did much to clarify and unify a field that had puzzled for decades over the fundamental nature of this puzzling disease as reflected in the chapters that review its epidemiology and neuroanatomical and imaging findings
