Blood Groups and Human Heredity, 1900-1950 William H. Schneider, 2024-11-29 This monograph presents a detailed analysis of the beginning and rapid establishment of blood group research in the first half of the twentieth century The main theme of this book is how blood groups were used as a scientific explanation of differences in race health and human behaviour The discovery of the inheritance of blood groups and their uneven distribution among various human populations quickly developed into a new field of scientific study in various countries around the world Almost as quickly the discoveries were studied as genetic markers of race disease and behaviours such as crime insanity and temperament The time scope of coverage is the first half of the twentieth century beginning with Landsteiner s discovery of blood groups and ending with the period following the Second World War when the research was picked up again and became part of the revolution in human genetics accelerated by the discovery of the double helix By this time blood group genetics had undermined the very concept of race and became the foundation of population genetics The focus on the formative period of blood group research complements the recent resurgence of interest in the subject by providing in depth background and a base for further research

**Human Heredity in the Twentieth Century** Bernd Gausemeier, 2015-10-06 The essays in this collection examine how human heredity was understood between the end of the First World War and the early 1970s The contributors explore the interaction of science medicine and society in determining how heredity was viewed across the world during the politically turbulent years of the twentieth century

*A History of British Eugenics since 1865* David Redvaldsen, 2024-11-09 This book examines British eugenics from its origins in 1865 to the early 1990s It considers the two institutions promoting the doctrine the Galton Laboratory attached to the University of London and the Eugenics Society It charts internal and ideological changes across more than a century seeing eugenics as primarily a political movement The doctrine had influence on British society and guided adherents ranging from scientists to charitable ladies The Galton Laboratory published detailed studies of heredity It transformed itself into a centre for medical genetics after the Second World War As early as the 1920s the Eugenics Society was the mainspring of the doctrine formulating what became the British version of an international ideology It began as applied social Darwinism later incorporating a greater degree of meritocracy and amelioration Its support for sterilization in the 1930s eroded the kudos it had gained in policy making circles From the 1960s organized eugenics was especially a forum for learned and popular discussion of biology and sociology Medical advances after 1970 aided its continuation notably the growth of assisted reproductive technologies The book presents British eugenics as mostly shaped by domestic concerns offering new revelations and interpretations with the capacity to readjust historical thinking It also covers contemporary bioethical and political issues aligned to eugenics

Love and Eugenics in the Late Nineteenth Century Angelique Richardson, 2003 The idea of eugenics human selective breeding originated in Victorian Britain in response to the urban poor Darwin s evolutionary theory had laid the foundations for eugenics replacing paradise with

primordial slime Man had not fallen from Grace but risen from the swamps And as architect of his own destiny he might rise still further Eugenics was developed by Darwin s cousin Francis Galton in the 1860s Embracing the idea of evolution eugenists argued that through the judicious control of human reproduction and the numerical increase of the middle class Britain s supremacy in the world could be maintained Born and bred among the competitive Victorian middle class eugenics was a biologicistic discourse on class Aiming at racial improvement by altering the balance of class in society it was Galton argued practical Darwinism Eugenics found its most sustained expression in fiction and the periodical press and was central to late nineteenth century ideas on social progress forming part of the debate between hereditarians and environmentalists that peaked in the closing years of the century Even Gladstone had his vital statistics measured in Galton s eugenic laboratory Among the champions of eugenics were social purity feminists and New Women writers such as George Egerton Ellice Hopkins and Sarah Grand who argued that women were naturally biologically moral and that through rational reproduction middle class women could regenerate the British imperial race The New Woman has been the subject of numerous recent critical works However the oppressive ideas that coexisted with the emancipatory theories of some New Women ideas that were supremely class conscious remain largely unexamined as the focus remains on her more progressive aspects Love and Eugenics in the Late Nineteenth Century recontextualizes New Woman writers demonstrating that they were as concerned with the questions of poverty sickness and health as they were with the changing role of women the issue for which they are currently generally known and celebrated Focusing on fiction and the press and drawing on the papers and published work of Galton and other eugenists Angelique Richardson reveals the cultural pervasiveness of eugenics and explores for the first time the intimate relations between early feminism and eugenics and making a radical contribution to nineteenth century studies     **Natural History** ,1974     *Humanity and Nature in Economic Thought* Gábor Bíró,2021-11-29 Humanity and Nature in Economic Thought Searching for the Organic Origins of the Economy argues that organic elements seen as incompatible with rational homo economicus have been left out of or downplayed in mainstream histories of economic thought The chapters show that organic aspects that is aspects related to sensitive cognitive or social human qualities were present in the economic ideas of a wide range of important thinkers including Hume Smith Malthus Mill Marshall Keynes Hayek and the Polanyi brothers Moreover the contributors to this thought provoking volume reveal in turn that these aspects were crucial to how these key figures thought about the economy This stimulating collection of essays will be of interest to advanced students and scholars of the history of economic thought economic philosophy heterodox economics moral philosophy and intellectual history     *Breeding Better Vermonters* Nancy L. Evolutionary Plasticity The Problem of Quantification of Adaptedness Darwinian Fitness Varieties of Natural Selection Darwinian Fitness and Adaptedness Evolutionary Opportunism and Adaptive Radiation Progressive Evolution References 2 Cave Ecology and the Evolution of Troglodites Animal Life in Caves The Cave Ecosystem Regressive Evolution in Cave Animals Speciation and Adaptation in Troglodites *Humanity's Rise to Superdominance, the Global Ecological Crisis, and the Way Forward for Education* Adam C. Scarfe, 2022-12-01 This book pinpoints the evolutionary connection between the global ecological crisis and transgenerational learning and education As Julian Huxley 1887 1975 described the cumulative passing down of knowledge skills and ideas by one generation to the next over eons of time which has been afforded by the advent of complex languages in the evolutionary past is chiefly responsible for humanity's planetary superdominance However given that the drive of the human species to increase its control over the natural world has today run up against ecological limits there is an evolutionary existential choice to be made in relation to the ultimate purposes of formal education Should humanity double down on the anthropocentric humanist project of superdominance including the goals of unlimited economic growth development and scientific and technological progress Alternatively should a biocentric anti humanist and or postmodernist deconstruction of formal education take place Or should a holistic organicist orientation emphasizing biological wisdom help to shape its future As this book shows the answers to these philosophical questions on the parts of educators prospective teachers and learners will going forward play a key role in deciding the evolutionary trajectories of all life forms on the planet **The Cumulative Book Index**, 1911 A world list of books in the English language **The Wellborn Science** Mark B. Adams, 1990 The four contributors to this volume examine the eugenics movements in Germany France Brazil and the Soviet Union and describe how geneticists and physicians participated in the development of policies concerning the improvement of hereditary qualities in humans They examine the scientific components of those programs and discuss the involvement of social religious and political forces that significantly altered the original scientific goals The book opens up new and comparative perspectives on the history of eugenics and the social uses of science in general

*Human Population Genetics* P.P. Majumder, 2012-12-06 J B S Haldane R A Fisher and Sewall Wright simultaneously and largely independently laid the foundations of population genetics and the mathematical theory of evolution Hal dane was born on November 5 1892 Although he primarily worked at the University College London UCL in 1957 he resigned from the UCL and joined the Indian Statistical Institute Calcutta India as a Research Professor In celebration of his birth centenary the Indian Statistical Institute organized an International Conference on Human Genetics from 15 to 19 December 1992 The prime motive in holding this Conference was to bring together a group of scientists geneticists anthropologists clinicians and statisticians to evaluate the impact of Haldane's contributions to various areas of human genetics and also to review recent developments in the subject Session and lecture themes were so chosen that they covered areas theoretical and applied classical and emerging Speakers were then identified and invited to deliver lectures on these themes Manuscripts of all

invited presentations and a selected number of contributed presentations were considered for inclusion in this Proceedings Volume Each manuscript was reviewed by at least one Conference participant which resulted in revision of several manuscripts and rejection of some This volume is a collection of the manuscripts which have been accepted after the review process The Conference began with the J B S Haldane Centenary Lecture delivered by C R Rao From Eve to Evolution Kimberly A. Hamlin, 2014-05-08 From Eve to Evolution provides the first full length study of American women's responses to evolutionary theory and illuminates the role science played in the nineteenth century women's rights movement Kimberly A Hamlin reveals how a number of nineteenth century women raised on the idea that Eve's sin forever fixed women's subordinate status embraced Darwinian evolution especially sexual selection theory as explained in The Descent of Man as an alternative to the creation story in Genesis Hamlin chronicles the lives and writings of the women who combined their enthusiasm for evolutionary science with their commitment to women's rights including Antoinette Brown Blackwell Eliza Burt Gamble Helen Hamilton Gardener Charlotte Perkins Gilman and Elizabeth Cady Stanton These Darwinian feminists believed evolutionary science proved that women were not inferior to men that it was natural for mothers to work outside the home and that women should control reproduction The practical applications of this evolutionary feminism came to fruition Hamlin shows in the early thinking and writing of the American birth control pioneer Margaret Sanger Much scholarship has been dedicated to analyzing what Darwin and other male evolutionists had to say about women but very little has been written regarding what women themselves had to say about evolution From Eve to Evolution adds much needed female voices to the vast literature on Darwin in America *History of Humanity* UNESCO, 2008-12-31 This is the seventh and final volume in this comprehensive guide to the history of world cultures throughout historical times **Genetic Seeds of Warfare** R. Paul Shaw, Yuwa Wong, 2020-12-22 For millennia humanity has simultaneously deplored and waged war With each conflict the stakes have risen and we now face global annihilation for the sake of a practice all the world claims to condemn Is there some seemingly irresistible force that impels us toward our own destruction To explain this central paradox of human behaviour Genetic Seeds of Warfare originally published in 1989 advances a startling new theory It traces the origins of warfare back to early groups of Homo sapiens in competition for scarce resources showing that warfare evolved as these groups evolved kin group against kin group tribe against tribe nation against nation Rather than being tied to a specific gene warfare emerged as one of many behavioural strategies for maximising genetic survival As social groups became more complex motivations for warfare developed from simple protection of blood relations to political appeals to shared ethnicity religion and national identity But the ultimate cause of warfare is rooted in the most basic of human drives the need to ensure that one's genes will survive and reproduce The authors challenge many assumptions about human behaviour in general and warfare in particular They convincingly present the case for an evolutionary understanding of the propensity for warfare supporting their argument with data from a vast array of social and natural science research In doing so they reveal

why previous attempts at ending war have failed and make proactive suggestions toward the development of a new agenda for world peace

**Science in the Contemporary World** Eric G. Swedin, 2005-03-08 This work is a unique introductory A Z resource detailing the scientific achievements of the contemporary world and analyzing the key scientific trends discoveries and personalities of the modern age An authoritative reference survey of the modern age of scientific discovery Science in the Contemporary World is a scholarly yet accessible chronicle of scientific achievement from the discovery of penicillin to the latest developments in space exploration and cloning Over 200 A Z entries cover the full spectrum of contemporary science with emphasis on its diverse nature Within the last 50 years medicine has eradicated the killer disease smallpox but primarily because the virus can live only in humans Space probes have revealed that on Europa a moon of Jupiter an ice capped ocean with the potential to support life probably exists Marvels from animal psychology and deep sea exploration are also explored extensively

Hormones, Heredity, and Race Cheryl A. Logan, 2013-03-20 Early in the twentieth century arguments about nature and nurture pitted a rigid genetic determinism against the idea that genes were flexible and open to environmental change This book tells the story of three Viennese biologists Paul Kammerer Julius Tandler and Eugen Steinach who sought to show how the environment could shape heredity through the impact of hormones It also explores the dynamic of failure through both scientific and social lenses During World War I the three men were well respected scientists by 1934 one was dead by his own hand another was in exile and the third was subject to ridicule Paul Kammerer had spent years gathering zoological evidence on whether environmental change could alter heredity using his research as the scientific foundation for a new kind of eugenics one that challenged the racism growing in mainstream eugenics By 1918 he drew on the pioneering research of two colleagues who studied how secretions shaped sexual attributes to argue that hormones could alter genes After 1920 Julius Tandler employed a similar concept to restore the health and well being of Vienna s war weary citizens Both men rejected the rigidly acting genes of the new genetics and instead crafted a biology of flexible heredity to justify eugenic reforms that respected human rights But the interplay of science and personality with the social and political rise of fascism and with antisemitism undermined their ideas leading to their spectacular failure

**Analytic Philosophy in Finland** , 2016-08-09 Finland is internationally known as one of the leading centers of twentieth century analytic philosophy This volume offers for the first time an overall survey of the Finnish analytic school The rise of this trend is illustrated by original articles of Edward Westermarck Eino Kaila Georg Henrik von Wright and Jaakko Hintikka Contributions of Finnish philosophers are then systematically discussed in the fields of logic philosophy of language philosophy of science history of philosophy ethics and social philosophy Metaphilosophical reflections on the nature of philosophy are highlighted by the Finnish dialogue between analytic philosophy phenomenology pragmatism and critical theory

Emerging Syntheses In Science David Pines, 2018-03-05 Evolution of self replicating

macromolecules through natural selection is a dynamically ordered process Two concepts are introduced to describe the physical regularity of macromolecular evolution sequence space and quasi species Natural selection means localization of a mutant distribution in sequence space This localized distribution called the quasi species is centered around a master sequence or a degenerate set that the biologist would call the wild type The self ordering of such a system is an essential consequence of its formation through self reproduction of its macromolecular constituents a process that in the dynamical equations expresses itself by positive diagonal coefficients called selective values The theory describes how population numbers of wild type and mutants are related to the distribution of selective values that is to say how value topography maps into population topography For selectively nearly neutral mutants appearing in the quasi species distribution population numbers are greatly enhanced as compared to those of disadvantageous mutants even more so in continuous domains of such selectively valuable mutants As a consequence mutants far distant from the wild type may occur because they are produced with the help of highly populated less distant precursors Since values are cohesively distributed like mountains on earth and since their positions are multiply connected in the high dimensional sequence space the overpopulation of nearly neutral mutants provides guidance for the evolutionary process Localization in sequence space subject to a threshold in the fidelity of reproduction is steadily challenged until an optimal state is reached The model has been designed according to experimentally determined properties of self replicating molecules The conclusions reached from the theoretical models can be used to construct machines that provide optimal conditions for the evolution of functional macromolecules
