*The Philosophical Principles of Natural and Revealed Religion, Unfolded in a Geometrical Order.* F.P. Ramsay (Chevalier, Andrew Michael), 1749      **The Philosophical Principles of Natural and Revealed Religion, Unfolded in a Geometrical Order, by the Chevalier Ramsay,...** Andrew Michael Ramsay, 1749      *Damascius' Problems and Solutions Concerning First Principles* Damascios, 2010-10-28

Damascius was head of the Neoplatonist academy in Athens when the Emperor Justinian shut its doors forever in 529. His work *Problems and Solutions Concerning First Principles* is the last surviving independent philosophical treatise from the Late Academy. Its survey of Neoplatonist metaphysics, discussion of transcendence and compendium of late antique theologies make it unique among all extant works of late antique philosophy. It has never before been translated into English. The *Problems and Solutions* exhibits a thoroughgoing critique of Proclean metaphysics starting with the principle that all that exists proceeds from a single cause, proceeding to critique the Proclean triadic view of procession and reversion and severely undermining the status of intellectual reversion in establishing being as the intelligible object. Damascius investigates the internal contradictions lurking within the theory of descent as a whole, showing that similarity of cause and effect is vitiated in the case of processions where one order (e.g. intellect) gives rise to an entirely different order (e.g. soul). Neoplatonism as a speculative metaphysics posits the One as the exotic or extopic explanans for plurality conceived as immediate present to hand and therefore requiring explanation. Damascius shifts the perspective of his metaphysics; he struggles to create a metaphysical discourse that accommodates insofar as language is sufficient the ultimate principle of reality. After all, how coherent is a metaphysical system that bases itself on the Ineffable as a first principle? Instead of creating an objective ontology, Damascius writes ever mindful of the limitations of dialectic and of the pitfalls and snares inherent in the very structure of metaphysical discourse.

*Nature's Third Cycle* Arnab Rai Choudhuri, 2015-01-29

The cycle of day and night and the cycle of seasons are two familiar natural cycles around which many human activities are organized. But is there a third natural cycle of importance for us humans? On 13 March 1989, six million people in Canada went without electricity for many hours; a large explosion on the sun was discovered as the cause of this blackout. Such explosions occur above sunspots, dark features on the surface of the Sun that have been observed through telescopes since the time of Galileo. The number of sunspots has been found to wax and wane over a period of 11 years. Although this cycle was discovered less than two centuries ago, it is becoming increasingly important for us as human society becomes more dependent on technology. For nearly a century after its discovery, the cause of the sunspot cycle remained completely shrouded in mystery. The 1908 discovery of strong magnetic fields in sunspots made it clear that the 11-year cycle is the magnetic cycle of the sun. It is only during the last few decades that major developments in plasma physics have at last given us the clue to the origins of the cycle and how the large explosions affecting the earth arise. *Nature's Third Cycle* discusses the fascinating science behind the sunspot cycle and gives an insider's perspective of this cutting-edge scientific
