Embryo Politics Thomas Banchoff, 2011-05-15 Since the first fertilization of a human egg in the laboratory in 1968 scientific and technological breakthroughs have raised ethical dilemmas and generated policy controversies on both sides of the Atlantic Embryo stem cell and cloning research have provoked impassioned political debate about their religious moral legal and practical implications National governments make rules that govern the creation destruction and use of embryos in the laboratory but they do so in profoundly different ways In Embryo Politics Thomas Banchoff provides a comprehensive overview of political struggles about embryo research during four decades in four countries the United States the United Kingdom Germany and France Banchoff's book the first of its kind demonstrates the impact of particular national histories and institutions on very different patterns of national governance Over time he argues partisan debate and religious secular polarization have come to overshadow ethical reflection and political deliberation on the moral status of the embryo and the promise of biomedical research Only by recovering a robust and public ethical debate will we be able to govern revolutionary life science technologies effectively and responsibly into the future *Juridification In Bioethics: Governance Of Human* Pluripotent Cell Research Calvin Wai-loon Ho, 2016-07-28 What is legal about bioethics What are the ideas and artefacts that bioethics encompasses and how are they related to law What is the role of law in bioethics In this work Calvin Ho attempts to address these questions in the context of the governance of human pluripotent stem cell research In essence he argues that the hybridization of law through processes devices and techniques of juridification has helped to constitute bioethics as a public sphere and an emergent civic epistemology Drawing on his multi sited ethnographic fieldwork and on Actor Network Theory Ho explains how the law has through bioethics contributed to the scientific and public understanding of human pluripotent stem cell research and its artefacts particularly the embryo and human animal combinations Although the focus of his work is on bioethical developments in Singapore over a period of more than 15 years parallel developments in key jurisdictions especially the United States of America and the United Kingdom and in international science policy are also

evaluated It is through appreciating how it has progressed that bioethics will be better able to engage with future challenges presented by advances in human embryo research and gene editing techniques among others The 14 Day Rule and Human Embryo Research Sarah Franklin, Emily Jackson, 2024-05-24 This assessment of Britain's influential 14 day rule governing embryo research explores how and why it became the de facto global standard for research into human fertilisation and embryology arguing that its influence and stability offers valuable lessons for successful biological translation One of the most important features of the 14 day rule the authors claim is its reliance on sociological as well as ethical legislative regulatory and scientific principles The careful integration of social expectations and perceptions as well as sociological definitions of the law and morality into the development of a robust legislative infrastructure of human fertilisation and embryology enabled what has come to be known as the Warnock Consensus a solid and enduring public acceptance that has enabled successive parliamentary approval for controversial areas of scientific research in the UK such as stem cell research and mitochondrial donation for over 30 years These important sociological insights are increasingly relevant to new biotranslational challenges such as human germline gene editing and the use of AI assisted technologies in human reproduction As the legislation around the 14 day rule begins to be reviewed worldwide the important lessons we can learn from its global and enduring significance will apply not only to future legislation governing embryo research but to the future of biological translation more widely An important volume for those interested in reproductive studies biogovernance and biological translation it is suitable for researchers clinicians and students in medicine biosciences sociology and science and technology studies Independent Television Production in the UK David Lee, 2018-03-07 This book is the first authoritative account of the UK s independent television production sector following the creation of Channel 4 in 1982 It examines the rise of a global industry increasingly interconnected through format development distribution ancillary sales and rights Drawing on case studies interviews and policy analysis the author considers the cultural politics behind the growth of the indies the labour conditions for workers in this sector and some of the key television programmes that have been created within it Filling an important gap in our understanding this book constitutes a comprehensive account of this vital cultural industry for students academics and researchers working in the areas of the cultural and creative industries media and cultural policy and television studies The Writers Directory ,2013 International Who's Who of Authors and Writers 2004 Europa Publications, 2003 Accurate and reliable biographical information essential to anyone interested in the world of literature TheInternational Who s Who of Authors and Writersoffers invaluable information on the personalities and organizations of the literary world including many up and coming writers as well as established names With over 8 000 entries this updated edition features Concise biographical information on novelists authors playwrights columnists journalists editors and critics Biographical details of established writers as well as those who have recently risen to prominence Entries detailing career works published literary awards and prizes membership and contact addresses where
