The Political Theories of Risk Analysis Nicholas P. Guehlstorf, 2004-12-08 The purpose of this study is to question whether liberal political theories ought to inform the way policymakers and administrators analyze risk in proposed courses of environmental practice In order to explore the relationship of liberal theory to rational practice in environmental policy this project examines the risk analysis used to approve the genetically engineered bovine growth hormone in American agricultural policy The Political Theories of Risk Analysis suggests that American environmental public policy is attempting to assess danger with an incomplete notion of utility to eliminate the hazards of society with an inadequate contractual justification of political authority and to publicly debate accepted levels of risk with an unfulfilled critical social theory Because environmental risk analyses are incorrectly perceived as technically rational and socially apolitical they result in practices that are muddled and misdirected Making theoretical foundations explicit however could lead to improved practice Public policy and administrative decisions regarding agricultural biotechnologies should and can function with more concern for democratic values The Political Theories of Risk Analysis is for environmental scientists philosophers public policy planners applied ethicists political scientists and environmentalists

Smith, 2015-05-01 What is it to be morally responsible for something Recent philosophical work reveals considerable disagreement on the question Indeed some theorists claim to distinguish several varieties of moral responsibility with different conditions that must be satisfied if one is to bear responsibility of one or another of these kinds Debate on this point turns partly on disagreement about the kinds of responses made appropriate when one is blameworthy or praiseworthy It is generally agreed that these include reactive attitudes such as resentment and gratitude but theorists disagree about the nature of these attitudes They dispute the connections between moral responsibility desert and the justification of punishment as well Many theorists take it that whatever the appropriate responses are they are responses to an agent's quality of will but there is no consensus on what this comes to Are the agent's beliefs about the moral status of her behavior what matter or is it what she cares about or what she judges important This volume presents twelve original essays from participants in these debates The contributors include prominent established figures as well as influential younger philosophers A substantive introduction by the editors surveys recent debates and situates the contributions within it
