Neanderthal Religion? Thomas Hughson,2024-06-20 Neanderthals are the most researched extinct members of genus Homo They have been gone for between 28 000 and 40 000 years far beyond the reach of cultural memories An expanding number of archaeologists conclude that Neanderthals are as genetics confirms co human with us whose lineage emerged in Africa about 300 000 years ago Were they the same as us No Do archaeological discoveries of tools and behavioral clues indicate what may have been Neanderthal religion Taking religion as spirituality realized in common Hughson answers the controversial question with a conjecture assisted by anthropology Neanderthals were hunter gatherer animists associated with bears burials defleshed bones and care for invalids Hughson goes further exploring a theology of Neanderthal animism He argues it was an early non verbal revelation of the divine Experiential consciousness of being alive meshed with all living things in one web of life that exceeded any living individual Neanderthals encountered the source of being alive filtered through nature and the cosmos Far from complete the encounter may have had an acuity lost to modernity and many Christians The book concludes by relating Neanderthal religion to special revelation and biblical faith with attention to the Gospel of John on the divine Logos and Aquinas on divine immanence

The Oxford

Handbook of Cognitive Archaeology, 2024-03-12 Cognitive Archaeology is a relatively young though fast growing discipline. The intellectual heart of cognitive archaeology is archaeology, the discipline that investigates the only direct evidence of the actions and decisions of prehistoric people. Its theories and methods are an eclectic mix of psychological, neuroscientific, paleoneurological, philosophical, anthropological, ethnographic, comparative, aesthetic, and experimental theories, methods, and models, united only by their focus on cognition. The Oxford Handbook of Cognitive Archaeology is a landmark publication showcasing the theories, methods, and accomplishments of archaeologists who investigate the human mind, including its evolutionary development, its ideation, thoughts, and beliefs, and its very nature through material forms. The volume encompasses the wide spectrum of the discipline, showcasing contributions from more than 50 established and emerging scholars from Europe, Africa, Asia, Australia, and the Americas. Prominent among these are contributions that discuss the epistemological frameworks of both the evolutionary and ideational approaches and the leading theories that ground interpretations. Significantly, the majority of chapters deliver substantive contributions that analyze specific examples of material culture from the oldest known stone tools to ceramic and rock art traditions of the recent millennium. These examples include the gamut of methods and techniques, including typology, replication studies, chaînes opératoires, neuroarchaeology, ethnographic comparison, and the direct historical approach. In addition, the book begins with retrospective essays by several of the pioneers of cognitive archaeology, presenting a broad range of state-of-the-art investigations into cognitive abilities, tackling thorny issues like the cognitive status of Neandertals, and concluding with speculative essays about the future of an archaeology of mind and of the mind itself. **What Is Progress** Aldo Schiavone, 2021-07-13

Historian Schiavone mixes philosophy, politics, and anthropology in this stimulating inquiry into the paradigm of progress. Publishers Weekly: Today many believe that progress is a word to be avoided, a relic from a past, the dangerous product of an era of intellectual naivety that would be best forgotten. Yet the idea of progress is rooted in a human impulse that is both profound and essential, a way of interpreting history without which our ability to plan the future and our very identity would be at stake. Written just before the onset of the Coronavirus pandemic, which is now putting its argument to the hardest of tests, this lucid essay explores how science and technology have been and can still be a powerful engine for human advancement.

God, Darwin, and the Problem of Evil James J. Garber, 2016-04-15 The problem of evil has troubled theologians and philosophers since antiquity. Multiple solutions to this problem have been proposed over the centuries, but none has fully answered the question of why God allows evil into our lives. Author James J. Garber offers a systematic explanation of the problem of evil in his book *God, Darwin, and the Problem of Evil*. Garber's answer is based on evolution as developed by Charles Darwin in the nineteenth century. Evolution, as explained by Darwin, has come to be accepted by the scientific community as an empirically sound explanation for how humans, flora, and fauna have come to exist on earth. Our environment is constantly changing, and if we are to survive in our world, we must evolve. Thus, what we view as the problem

of evil is actually Gods or some higher powers way of helping us survive and become more advanced as a species We need challenges or some form of evil to survive Thus the evils we face daily are part of the material world in which we live God Darwin and the Problem of Evil provides a systematic explanation of evil Whether one is a theist deist or an atheist the problem of evil can be solved by Garbers Darwinian and evolutionary solution to the problem of evil **East-West Sword and Word** Anwar A. Abdullah,2017-02-24 Amid the rising technicalities of modernism the heart of humanity has been ripped apart and while religionism is tearing throughout the heart of modernity everything is hinting at danger to come Caught amid their dramatic collide we moderns have been left in a de facto despair And while the glory each claimed seems a key factor for more tragedies they are almost overshadowed by the merging supremacy of money lifemammonism They are all letting us down and parts us moderns from our trustworthy dream of truth beauty and justice Further it is impossible to read far in the underlying factors and related elements of the coming crises and all of them are worrisome either of reorganization of tender nature of reprogramming of living cells and of current technotronic engineering of time via digitized machines without finding that they will certainly shake the good grounds of faith and beliefs everywhere De risking the inevitable and while working around such a failure we moderns have to humanly build on our own strength Humans Versus Nature Daniel R. Headrick,2020 Since the appearance of Homo sapiens on the planet hundreds of thousands of years ago human beings have sought to exploit their environments extracting as many resources as their technological ingenuity has allowed As technologies have advanced in recent centuries that impulse has remained largely unchecked exponentially accelerating the human impact on the environment Humans versus Nature tells a history of the global environment from the Stone Age to the present emphasizing the adversarial relationship between the human and natural worlds Nature is cast as an active protagonist rather than a mere backdrop or victim of human malfeasance Daniel R Headrick shows how environmental changes epidemics climate shocks and volcanic eruptions have molded human societies and cultures sometimes overwhelming them At the same time he traces the history of anthropogenic changes in the environment species extinctions global warming deforestation and resource depletion back to the age of hunters and gatherers and the first farmers and herders He shows how human interventions such as irrigation systems over fishing and the Industrial Revolution have in turn harmed the very societies that initiated them Throughout Headrick examines how human driven environmental changes are interwoven with larger global systems dramatically reshaping the complex relationship between people and the natural world In doing so he roots the current environmental crisis in the deep past **Evolutionary Neuropsychology** Frederick L. Coolidge,2020 In Evolutionary neuropsychology Coolidge examines the evolutionary origins of the human brain A new multidisciplinary science evolutionary neuropsychology assumes that brain regions developed their functions in response to environmental challenges over billions of years These regions and neuronal circuitry now serve newer functions exaptations and are now involved in many higher cognitive functions The SAGE Handbook of Evolutionary Psychology Todd K.
