Premixing Method Principle Design And Construction:

The Premixing Method Coastal Development Institute Tokyo,2003-01-01 The premixing method involves adding a small amount of cement to the soil used in reclamation The cement reacts with the water in the soil to produce a stronger non liquifying material for construction The premixing method can therefore reduce construction time as the counter measure work is carried out simultaneously with the reclamation The Premixing Method Coastal Development Institute

Tokyo,2005-12-20 The premixing method involves adding a small amount of cement to the soil used in reclamation The cement reacts with the water in the soil to produce a stronger non liquifying material for construction The premixing method can therefore reduce construction time as the counter measure work is carried out simultaneously with the reclamation process In addition the resultant material has enhanced bearing capacity and there is a reduction in earth pressure due to the increase in cohesion This book examines the premixing method in detail and is essential reading for coastal engineers hydrologists or construction engineers working in soft soil areas

The Deep Mixing Method Masaki Kitazume,Masaaki Terashi,2013-02-21 The Deep Mixing Method DMM a deep in situ soil stabilization technique using cement and or lime as a stabilizing agent was developed in Japan and in the Nordic countries independently in the 1970s Numerous research efforts have been made in these areas investigating properties of treated soil behavior of DMM improved ground under static and dynamic conditions design methods and execution techniques Due to its wide applicability and high improvement effect the method has become increasingly popular in many countries in Europe Asia and in the USA In the past three to four decades traditional mechanical mixing has been improved to meet changing needs New types of the technology have also been developed in the last 10 years e g the high pressure injection mixing method and the method that combines mechanical mixing and high pressure injection mixing technologies The design procedures for the DM methods were standardized across several organizations in Japan and revised several times Information on these rapid developments will benefit those researchers and practitioners who are involved in ground improvement throughout the world The book presents the state of the art in Deep Mixing methods and covers recent technologies research activities and know how in machinery design construction technology and quality control and assurance The Deep Mixing Method is a useful reference tool for engineers and researchers involved in DMM technology everywhere regardless of local soil conditions and variety in applications

The Pneumatic Flow Mixing Method Masaki Kitazume,2016-11-03 The pneumatic flow mixing method was developed to stabilize dredged soil and surplus soil for promoting their beneficial use in 1999 The pneumatic flow mixing method is a new type of the ex situ cement stabilization techniques in which dredged soil and surplus soil is mixed with a relatively small amount of chemical binder without any mixing paddles and blades in a pipeline When a relatively large amount of compressed air is injected into the pipeline soil can be separated into small blocks When binder is injected into the pipeline the soil block and binder are thoroughly mixed by means of turbulent flow generated in the soil block during transporting As

this method has many benefits rapid and large scale execution can be conducted with low cost it has been applied to many land reclamation projects backfilling behind earth retaining wall projects and shallow stabilization projects using dredged soils and surplus soils The book presents the state of the art in the pneumatic flow mixing method and covers recent technologies research activities and know how in machinery design construction technology and quality control and assurance The Pneumatic Flow Mixing Method is a useful reference tool for engineers and researchers involved in admixture stabilization technology everywhere regardless of local soil conditions and a variety in applications
