Preschool Iq Prenatal And Early Development Correlates:

Preschool IQ Sarah H. Broman, Paul L. Nichols, Wallace A. Kennedy, 2017-09-13 Originally published in 1975 this volume reports a multidisciplinary longitudinal study of the precursors of intelligence as measured by Stanford Binet IQ scores of 4 year old children Over 26 000 children more than 12 000 whites and 14 000 blacks were followed from the prenatal period and 169 prenatal and developmental variables were examined in relation to preschool IQ scores Considered are the degree to which events during pregnancy and delivery physical and psychomotor development in infancy and childhood and certain major family characteristics were related to IQ scores The large heterogeneous sample of children studied prospectively and the wide range of biological and social variables investigated made this work of major importance at the time The level of maternal education and the socioeconomic status of the family were major contributors to explained variance in IQ and had larger effects among whites than among blacks Other findings relate low IQ at age 4 to delayed motor and mental development in infancy Many other factors thought to affect IQ scores both individually and in combination are reported to make this a work of importance to all concerned with the neurological and mental development of the child

Early Parenting and Later Child Achievement Arnold Honig, 1991-02-04

Parental Belief Systems Irving E. Sigel, Ann V. McGillicuddy-DeLisi, Jacqueline J Goodnow, 2014-02-25 Research on the topic of parent beliefs or parent cognition has increased tremendously since the original publication of this volume in 1985 For this revised second edition the editors sought to reflect some of the new directions that research on parent cognition has taken By offering a greater variety of topics it gives evidence of the intellectual concerns that now engage researchers in the field and testifies to the expanding scope of their interests Although a unique collection because it reflects the diversity that exists among major researchers in the field it evinces a common theme that the ideas parents have regarding their children and themselves as parents have an impact on their actions This emphasis on parents ideas shifts the focus on sources of family influence to ideas or beliefs as determinants of family interactions The implication of this way of thinking for practitioners is that it suggests the shift to ideas and thoughts from behavior and attitudes

Children, Schools, And Inequality Doris R Entwisle, 2018-03-05 Educational sociologists have paid relatively little attention to children in middle childhood ages 6 to 12 whereas developmental psychologists have emphasized factors internal to the child much more than the social contexts in explaining children s development *Children Schools and Inequality* redresses that imbalance It examines elementary school outcomes e g test scores grades retention rates in light of the socioeconomic variation in schools and neighborhoods the organizational patterns across elementary schools and the ways in which family structure intersects with children s school performance

Adding data from the Baltimore Beginning School Study to information culled from the fields of sociology child development and education this book suggests why the gap between the school achievement of poor children and those who are better off has been so difficult to close Doris Entwistle Karl Alexander and Linda Olson show why the first grade transition how children negotiate entry into full time schooling is a crucial period They also show that events over that time have repercussions that echo throughout children s entire school careers Currently the only study of this life transition to cover a comprehensive sample and to suggest straightforward remedies for urban schools Children Schools and Inequality can inform educators practitioners and policymakers as well as researchers in the sociology of education and child development

Michael Lewis,2013-06-29 Since the first edition of this volume was published in 1976 interest in the problem of intelligence in general and infant intelligence in particular has continued to grow The response to the first edition was heartening many readers found it a source of information for the diverse areas of study in infant intelligence Because of the success of that volume we have decided to issue a second edition This edition is in many ways both similar to and different from the first Its similarity lies in the fact that many of the themes and many of the contributors remain the same Its difference can be found in the updating of old chapters and the addition of several new ones Taken together the chapters present a rounded picture of the central issues in infant intelligence Because the aim was to present a picture of the issues no attempt other than the selection of authors and themes can be made to integrate these chapters into a single coherent whole In large part this reflects the diversity of study found in the area of early intellectual behavior Rather than having a comprehensive theory of infant intelligence the field abounds with a series of critical questions To unite these chapters into some coherence it will be necessary to articulate what these issues might be Five major themes run through out the field of infant intelligence and thus through this volume **Psychology and Our Curious World** Wind Goodfriend,Gary W Lewandowski,Gary W. A. Mednick,Tyrone D. Cannon,Christopher E. Barr,Jose M. LaFosse,2012-12-06 This volume reports the proceedings of a NATO Advanced Workshop held in Castelvechio Pas coli Italy from August 28 September 1 1989 An important inspiration for this Workshop came from our studies in Helsinki and Denmark which have found that exposure to an influenza epidemic during the second trimester of fetal development increases the risk of adult schizophrenia This finding has stimulated an important new hypothesis in the study of the etiology of schizophrenia It has suggested the possibility that disturbances of brain development during gestation may contribute to the risk of adult schizophrenia We determined that it would be of value to bring together schizophrenia researchers and those doing basic studies of the development of the brain Both groups of researchers were encouraged to communicate at a level that would help other scientists to integrate their knowledge and techniques into their own discipline For this reason perhaps the papers of this volume are remarkably clear and not difficult to understand The first four chapters describe the neurochemical and structural aspects of brain development The chapter by Dziegielewska and Saunders discusses transport mechanisms and the properties of endogenous and exogenous substances that control the internal environment of the developing brain In the second chapter Nowakowski reports on his studies of the develop ment of the hippocampus in mice genetically inbred to exhibit disruptions of neural migration
