**Cosmology - The Past, Present and Future of the Universe** Herman J. Mosquera Cuesta, Kim Ho Yeap, 2024-10-30  
Cosmology the science of all that exists in the universe is an interdisciplinary field that seeks to understand the fundamental nature of the universe that is how it evolved from its primordial stages including the Big Bang to its present state and its potential future This quest is driven by centuries of astronomical observations and advanced physical theories The growing number of ground based observatories space based satellites and cutting edge tools like the Hubble Space Telescope the James Webb Space Telescope and gravitational wave observatories allow us to look back to the very early stages of our expanding universe offering unprecedented insights This book addresses several important cosmological issues including humanity's enduring search for other advanced civilizations in the cosmos It highlights the importance of such cosmic exploration and provides a comprehensive understanding of the concept of spacetime within the framework of general relativity The book introduces a cosmological model that incorporates an evolving curvature term within the standard model of cosmology and presents arguments in favor of a rotating universe exploring the associated mechanisms of how light and matter could escape from a Kerr black hole In addition it delves into modern efforts by cosmologists to uncover the actual shape of the universe its topology using the latest data Finally the book examines the critical role of quantum field theory in helping theorists build an increasingly robust picture of the cosmos The editors hope that this scientifically rich and enlightening volume will engage readers and inspire further exploration into the mysteries of the universe     *Cmb Anisotropies Two Years After Cobe: observations, Theory And The Future - Proceedings Of The 1994 Cwru Workshop*  
Lawrence M Krauss, 1995-01-16 This volume records the latest experimental and theoretical results on anisotropies in the cosmic microwave background CMB The book begins with a survey article describing the main observational issues and in which the current COBE DMR whole sky anisotropy data now dramatically visible above the noise are displayed Results and analyses by the MAX Python MSAM White Dish and South Pole groups amongst others are included The theoretical implications of these results for cosmological scenarios are explored The workshop also included a discussion of how the interplay between theory and experiment can best be enhanced     *Ninth Texas Symposium on Relativistic Astrophysics*  
Jürgen Ehlers, Judith J. Perry, Martin Walker, 1980     **Universe and Future of Humanity** Alexander Bolonkin, 2012-04-27  
Book is described the arrangement of the Universe This is the scientific prediction of the non biological electronic civilization and immortality of human being Such a prognosis is predicated upon a new law discovered by the author for the development of complex systems According to this law every self copying system tends to be more complex than the previous system provided that all external conditions remain the same The consequences are disastrous humanity will be replaced by a new civilization created by intellectual robots which the author refers to as E humans and E beings These creatures whose intellectual and mechanical abilities will far exceed those of man will require neither food nor oxygen to sustain their

existence They may have the emotion Capable of developing science technology and their own intellectual abilities thousands of times faster than humans can they will in essence be eternal

Future Science Does the Time Warp Rodney Bartlett, 2015-12-18 These ideas started making themselves at home in my brain 30 or 40 years ago But the ideas arrivals have been much more detailed and frequent since I discovered the science website vixra.org at the start of 2012 I'm not a professional of any kind just your average citizen with a burning desire to understand how everything works my main interest is cosmology I can't say I've been originating the ideas presented here My feeling as I typed these thoughts has always been that they already exist though since physics Unification appears to connect every point and time in the Cosmos not on early 21st century Earth in every case And I'm just a student learning about them It doesn't matter that I'm not a professional scientist Keep the following words said in 2015 by scientist Professor Neil Turok in mind We need a very different view of basic physics This is the time for radical new ideas He believes this is a great time in human history for the revolution to occur
