Presentation Of Depression:

The Clinical Presentation of Parkinson's Disease and the Dyadic Relationship between Patients and Carers Barbara Politynska, 2014-10-17 Providing care for someone with a neurodegenerative condition such as Parkinson's disease requires an integrated approach taking into account the needs of the person with the disorder and family members most closely involved in their care. This is only possible with an understanding of the complex nature of Parkinson's disease extending beyond the management of the motor disorder. It also requires an appreciation of the significant neuropsychological changes accompanying the disease which

Textbook of Men's Mental Health Jon E. Grant, Marc N. Potenza, 2007-04-02 The first of its kind, this book reflects progress in a too little explored corner of psychiatry to show that gender plays an integral role in mental health issues for men. *Textbook of Men's Mental Health* provides clinicians with the information they need for understanding how certain disorders manifest differently in men and for recognizing how treatment responses in men differ from those in women. Multidisciplinary coverage in this groundbreaking guide draws from fields such as public health and substance abuse to create a well rounded approach to addressing men's specific mental health problems. With contributions by today's experts in men's mental health, this work gathers the latest research about men's psychiatric issues from the difficulties in diagnosing male depression to strategies for engaging men in marital therapy. First addressing developmental issues specific to childhood, adolescence and old age, the text then presents treatment options for an array of problems from anxiety to sexual disorders to posttraumatic stress disorder. This volume then addresses psychosocial issues as they apply uniquely to men such as fathering, marriage, aggression and overcoming the stigma of mental health treatment, as well as a chapter on how men's ethnicity influences the effectiveness of therapy. Among the topics discussed are how men behave in intimate relationships with women and the mental health considerations unique to gay men, psychiatric disorders more prevalent in men than women such as substance abuse, antisocial personality and conduct disorder, up to date facts on male sexual functioning covering erectile dysfunction, premature ejaculation and male orgasmic disorder, why disorders less common in men, anxiety, depression, PTSD require different treatment than for women, coverage of compulsive disorders seen in men both more frequently such as pathological gambling and compulsive sexual behavior and less frequently such as kleptomania and compulsive buying, insight into how body image, a problem usually associated with women, has become a serious health issue for men as evidenced by eating disorders, muscle dysmorphia and steroid abuse. No previous text has addressed such a wide range of issues concerning men's mental health presented here in evidence based coverage featuring case vignettes, key points, practice guidelines and an extensive reference list in each chapter. Clinicians who wish to make more prudent decisions regarding the care of men with mental health issues will find this text indispensable to their practice and to the well being of their male patients.
