Lipshultz, Sarah E. Messiah, Tracie L. Miller, 2012-04-05 In just under three decades the world has witnessed an enormous rise in obesity with a parallel growth in cardiometabolic disease risk factors characterized by insulin resistance, dyslipidemia, and hypertension together known as the metabolic syndrome conditions previously unheard of in children and adolescents. During this time we have little knowledge of the global and cumulative detrimental health effects of childhood obesity. As obese children age, not only will their health be negatively affected but infertility and pregnancy complications associated with the metabolic syndrome will affect generations to come. The work force will undoubtedly be affected because of increased sick days and decreased work productivity. Identifying children and adolescents at the earliest stages of chronic disease onset should be the goal of clinical practice, yet there is no clear guidance for defining the risk of metabolic syndrome or appropriate risk factor thresholds in these groups. If children are identified early in the disease process, lifestyle and clinical interventions can be instituted when they are potentially more effective. **Pediatric Metabolic Syndrome: Comprehensive Clinical Review and Related Health Issues** approaches the pediatric metabolic syndrome by elucidating its effects on specific organ systems and by considering the problem through understanding the social, psychological, and economic consequences of it. The Editors have recruited an invited group of esteemed experts in the field to provide the most timely and informative approaches on how to deal with this health crisis. Through educating our practitioners, our future researchers, our health and community organizations, our legislators, and our families and children, we have the best chance at improving the health trajectory of the next generation. **Heart Failure**, 2013-03-01 **Heart Failure Strategies to Improve Outcomes**, the first volume in the Cardiovascular Team Approach Series, presents the true integrated care approach to the common syndrome of heart failure. The authors, including advanced practice nurses, physicians, a pharmacist, a social worker, and a dietitian, are professionals who actively practice and care for heart failure patients in the team environment.
