Principles Of Dispersal In Higher Plants:

Principles of Dispersal in Higher Plants Leendert Pijl, 1982 *Principles of Dispersal in Higher Plants* Leendert van der Pijl, 1982 **Principles of Dispersal in Higher Plants** L. van der Pijl, 2012-12-06 Reviewers from diverse branches of botany have exerted pressure to have chapters dealing with their field extended. If only to cover his incompetence, the author could not accede to these requests. Nor was it possible to respond to Eastern European urgings to extend the classificatory terminology especially in Chapter X. He is grateful for indications of factual shortcomings in the chosen field especially for those by Dr RUDOLF SCHMID, Ann Arbor, who provided extensive comment. L. VAN DER PIJL, The Hague, spring 1972. Preface to the First Edition. The work offered here is a companion volume to the work by K. FAEGRI and L. VAN DER PIJL, *Principles of Pollination Ecology*, which deals with the preceding phase of reproduction in plants. In the present work too, the emphasis is on principles and ecology. It is neither an enumeration of mechanisms nor a compilation of cases. RIDLEY'S monumental work *The Dispersal of Plants Throughout the World* comprises 700 large pages of small print and research has proceeded since then. Though this work is more than just a compilation and contains much insight and thoughts on principles in addition to reviews, its completeness hinders its use as a text book. As a reference work, it is unsurpassed and the writer made frequent use of it. The writer paid special attention to functional backgrounds for the use of taxonomists working with characters and to biosystematics at the macro level. **Principles of Dispersal In Higher Plants** L. V. D. Pijl, 1967 **Principles of dispersal in higher plants** Leendert van der Pijl, 1969 **Encyclopedia of Deserts** Michael A. Mares, 2017-01-19. *Encyclopedia of Deserts* represents a milestone; it is the first comprehensive reference to the first comprehensive reference to deserts and semideserts of the world. Approximately seven hundred entries treat subjects ranging from desert survival to the way deserts are formed. Topics include biology, birds, mammals, reptiles, amphibians, fishes, invertebrates, plants, bacteria, physiology, evolution, geography, climatology, geology, hydrology, anthropology, and history. The thirty-seven contributors, including volume editor Michael A. Mares, have had extensive careers in deserts research encompassing all of the world's arid and semiarid regions. The *Encyclopedia* opens with a subject list by topic, an organizational guide that helps the reader grasp interrelationships and complexities in desert systems. Each entry concludes with cross references to other entries in the volume, inviting the reader to embark on a personal expedition into fascinating previously unknown terrain. In addition, a list of important readings facilitates in-depth study of each topic. An exhaustive index permits quick access to places, topics, and taxonomic listings of all plants and animals discussed. More than one hundred photographs, drawings, and maps enhance our appreciation of the remarkable life, landforms, history, and challenges of the world's arid land. **Embryology of Flowering Plants: Terminology and Concepts, Vol. 3** T. B. Batygina, 2019-04-23. Plant embryology, dealing with the regularities of initiation and the first stages of development of an organism, is now flourishing because of the overall progress being made in natural sciences. Such discoveries of the 20th century as production of plants from a single somatic cell, experimental haploidy, and

parasexual hybridization were of general biological significance The combined efforts of embryologists geneticists and molecular biologists yielded the discovery of specific genes that control meiosis egg cell development and early stages of embryogenesis The tendency to synthesize data of embryology and genetics has become increasingly noticeable It is connected with the fact that the majority of problems connected with morphogenesis such as differentiation specialization the evaluation of features and the definition of the notions gene and feature and genotype and phenotype concern embryology and genetics embryogenetics in one way or another Evolutionary embryology has given rise to a new approach to the study of problems of adaptation in plants In connection with the problem of preserving biological diversity under conditions of ecological stress special attention is paid to ecological embryology revealing the critical periods in early ontogenesis and plasticity and tolerance of reproductive systems at the level of species and population The study of variability of morphogenesis and phenotype in population life cycle variations and the diversity of reproductive systems is the most important point in the population embryology of plants
