Principles Of Endocrine Pharmacology:

Principles of Endocrine Pharmacology John A. Thomas, Edward J. Keenan, 2012-12-06 The authors have provided an overview of the relationships between hormones that are physiologic constituents of the body as well as their pharmacologic use in replacement therapies and related endocrine dysfunction Principles of Endocrine Pharmacology concerns itself with the therapeutic use of hormones and hormone like substances or drugs that can act either by suppressing or enhancing the metabolism of certain glands of internal secretion Other drugs used for nonendocrine therapies can likewise affect the endocrine system Endocrine pharmacology emerged in the early 1900s with the use of crude pituitary extracts By the mid 1900s several investigators had isolated and begun to synthesize hormones or hormone like substances Recognizing the limited supply of hormones that could be obtained both from animal sources and human autopsy material the search for so called hormone substitutes also began early in the 1900s Recently recombinant DNA technologies have been used to provide alternative therapeutic sources of human insulin and human growth hormone Aside from insulin perhaps no other use of hormonally active substance is better exemplified by those drugs which affect fertility The synthesis of an orally effective steroid represented one of the first major breakthroughs in the chemical suppression of ovulation Since the orally active progestins were introduced in the 1950s several oral contraceptive steroid preparations have been marketed Indeed the advent of oral contraceptives for birth control has led to a renewed interest in endocrine pharmacology

chemicals on the body and most usually it is defined as chemicals that can have a therapeutic action to treat disease. Since it looks at the interaction between chemicals and body systems, pharmacology utilizes the basic disciplines of chemistry, biochemistry, physiology, pathology, and microbiology in its practice. Pharmacology is a foundation science for pharmacy, which is the rational prescribing of drugs to treat disease, and the foundation science for toxicology, which is the study of the toxic actions of chemicals on the body. The two volumes are organized in groups of chapters as follows. The first group of chapters discusses pharmacological principles and these include chapters on Pharmacodynamics, Pharmacokinetics, Neuropharmacology, Autonomic Pharmacology, and Clinical Pharmacology. The second group of chapters discusses the processes of Drug discovery and the Safety requirements for drugs to be used therapeutically and include Drug Discovery and Safety Pharmacology assessment. The largest group of chapters discusses different therapeutic areas and include Cardiovascular and renal pharmacology, Endocrine pharmacology, Neuropsychopharmacology, Pulmonary Pharmacology, Gastrointestinal pharmacology, Poisons, venoms, and toxins, Drugs on skeletal muscle, the Pharmacotherapy of inflammation, Reproductive pharmacology, Pain pharmacology, and analgesia.
