Helicopter Theory Wayne Johnson, 1994-01-01 The history of the helicopter may be traced back to the Chinese flying top c 400 BC and to the work of Leonardo da Vinci who sketched designs for a vertical flight machine utilizing a screw type propeller In the late 19th century Thomas Edison experimented with helicopter models realizing that no such machine would be able to fly until the development of a sufficiently lightweight engine When the internal combustion gasoline engine came on the scene around 1900 the stage was set for the real development of helicopter technology While this text provides a concise history of helicopter development its true purpose is to provide the engineering analysis required to design a highly successful rotorcraft Toward that end the book offers thorough comprehensive coverage of the theory of helicopter flight the elements of vertical flight forward flight performance design mathematics of rotating systems rotary wing dynamics and aerodynamics aeroelasticity stability and control stall noise and more Wayne Johnson has worked for the U S Army and NASA at the Ames Research Center in California Through his company Johnson Aeronautics he is engaged in the development of software that is used throughout the world for the analysis of rotorcraft In this book Dr Johnson has compiled a monumental
