Principles of Neo-plastic Art ,1948 **Theoretical Approaches to the Archaeology of Ancient Greece** Lisa

Nevett,2017-03-06 In the modern world objects and buildings speak eloquently about their creators Status gender identity and cultural affiliations are just a few characteristics we can often infer about such material culture But can we make similar deductions about the inhabitants of the first millennium BCE Greek world Theoretical Approaches to the Archaeology of Ancient Greece offers a series of case studies exploring how a theoretical approach to the archaeology of this area provides insight into aspects of ancient society An introductory section exploring the emergence and growth of theoretical approaches is followed by examinations of the potential insights these approaches provide The authors probe some of the meanings attached to ancient objects townscapes and cemeteries for those who created and used or inhabited them The range of contexts stretches from the early Greek communities during the eighth and seventh centuries BCE through Athens between the eighth and fifth centuries BCE and on into present day Turkey and the Levant during the third and second centuries BCE The authors examine a range of practices from the creation of individual items such as ceramic vessels and figurines through to the construction of civic buildings monuments and cemeteries At the same time they interrogate a range of spheres from craft production through civic and religious practices to funerary ritual Sensory Design Joy Monice Malnar,2004 Malnar architecture U of Illinois Urbana Champaign and Vodvarka fine arts Loyola U Chicago explore the nature of sensory response to the spatial constructs that people invest with meaning ranging from buildings of various sorts and purposes to gardens to constructions of fantasy These responses can serve as a typology for the design of si Negative Space Peter Weibel,2021-12-28 A bold new spatial perspective on modern sculpture with 800 color images of work by artists including Henry Moore Lygia Clark Anish Kapoor and Ana Mendieta This monumental richly illustrated volume from ZKM Karlsruhe approaches modern sculpture from a spatial perspective interpreting it through contour emptiness and levitation rather than the conventional categories of unbroken volume mass and gravity It examines works by dozens of twentieth and twenty first century artists including Hans Arp Marcel Duchamp Henry Moore Barbara Hepworth Lygia Clark Anish Kapoor Olafur Eliasson Ana Mendieta Fujiko Nakaya Tom s Saraceno and Alicja Kwade The large scale book contains over 800 color images Negative Space comes out of an epic exhibition at ZKM and volume editor Peter Weibel Chairman and CEO of ZKM takes a curatorial approach to the topic The last exhibition to deal comprehensively with the question What is modern sculpture was at the Centre Georges Pompidou in 1986 Weibel and ZKM pick up where the Pompidou left off examining sculptures not as figurative solid and self contained monoliths but in terms of open and hollow spaces reflection light shadow innovative materials data and the moving image Weibel puts advances in science architecture and mathematics in the context of avant garde sensibilities to show how modern sculpture significantly deviates from the work of the past Texts in the volume include

an introduction and twelve chapters written by Weibel with contributions by cocurators as well as facsimiles and reproductions of artist authored manifestos **Dadas on Art** Lucy R. Lippard,2007-01-01 A select anthology of the Dada movement focusing mainly on visual artists features prose poetry and polemics from such notables as Marcel Duchamp Max Ernst Tristan Tzara Hanna H och George Grosz and Jean Cocteau **Towards Universality** Richard Padovan,2013-07-04 There is no shortage of books about Le Corbusier or Mies van der Rohe or De Stijl However this book considers them in relation to each other observing how a study of one can illuminate the works of the others Going beyond a superficial look at the end products of these architects this book examines the philosophical foundations of their work taking as its central theme the aim of universality as opposed to the individual and the particular Each of these three aimed at universality but for each this concept took on a different form The universality of De Stijl and artists like Van Doesburg and Mondrian resembled that of the universe itself it was boundless going beyond the limits of the canvas and seeking to abolish the wall as the boundary between interior and exterior space In contrast each of Le Corbusier s creations was a self contained universe within a clear frame while Mies fluctuated between these two perspectives *The Visual Mind II* Michele Emmer,2005 This collection of essays by artists and mathematicians continues the discussion of the connections between art and mathematics begun in the widely read first volume of *The Visual Mind* in 1993 **BOOK JACKET** Realism, Rationalism, Surrealism Fer,Francis Haskell,Briony Fer,David Batchelor,Paul Wood,1993-01-01 This book begins by considering responses by French artists to the First World War showing how Purism Dada and early Surrealism are related to the ethos of post war reconstruction The authors then discuss the language of construction in places as dissimilar as France Germany and the Soviet Union the contrasting demands of the utility and decoration of objects and paintings and the relationship of surrealism to questions of sexuality and gender and to Freudian theory The book concludes by addressing the widespread debate over realism in art whether it represents an alternative to the elitism of the avant garde or whether avant garde art should play a role in the development of a modern realism
