Interactive Operations Research with Maple Mahmut Parlar,2012-12-06 Interactive Operations Research with Maple Methods and Models has two objectives to provide an accelerated introduction to the computer algebra system Maple and more importantly to demonstrate Maple's usefulness in modeling and solving a wide range of operations research OR problems This book is written in a format that makes it suitable for a one semester course in operations research management science or quantitative methods A number of students in the departments of operations research management science operations management industrial and systems engineering applied mathematics and advanced MBA students who are specializing in quantitative methods or operations management will find this text useful Experienced researchers and practitioners of operations research who wish to acquire a quick overview of how Maple can be useful in solving OR problems will find this an excellent reference Maple's mathematical knowledge base now includes calculus linear algebra ordinary and partial differential equations number theory logic graph theory combinatorics statistics and transform methods Although Maple's main strength lies in its ability to perform symbolic manipulations it also has a substantial knowledge of a large number of numerical methods and can plot many different types of attractive looking two dimensional and three dimensional graphs After almost two decades of continuous improvement of its mathematical capabilities Maple can now boast a user base of more than 300 000 academics researchers and students in different areas of mathematics science and engineering

Operations Research and Decision Aid Methodologies in Traffic and Transportation Management Martine Labbe,Gilbert Laporte,Katalin Tanczos,Philippe Toint,2013-06-29 Every one relies on some kind of transportation system nearly every day Going to work shopping dropping children at school and many other cultural or social activities imply leaving home and using some form of transportation which we expect to be efficient and reliable Of course efficiency and reliability do not occur by chance but require careful and often relatively complex planning by transportation system managers both in the public and private sectors It has long been recognized that mathematics and more specifically operations research is an important tool of this planning process However the range of skills required to cover both fields even partially is very large and the opportunities to gather people with this very diverse expertise are too few The organization of the NATO Advanced Studies Institute on Operations

Research and Decision Aid Methodologies in Traffic and Transportation Management in March 1997 in Balatonf red Hungary was therefore more than welcome and the group of people that gathered for a very studious two weeks on the shores of the beautiful lake Balaton did really enjoy the truly multidisciplinary and high scientific level of the meeting The purpose of the present volume is to report in a chronological order the various questions that were considered by the lecturers and the students at the institute After a general introduction to the topic the first week focused on issues related to traffic modeling mostly in an urban context
