Principles of Underwater Sound for Engineers Robert J. Urick, 1970 *Principles of Sonar Performance Modelling* Michael Ainslie, 2010-09-14 *Sonar performance modelling* SPM is concerned with the prediction of quantitative measures of sonar performance such as probability of detection It is a multi disciplinary subject requiring knowledge and expertise in the disparate fields of underwater acoustics acoustical oceanography sonar signal processing and statistical detection theory No books have been published on this subject however since the 3rd edition of Urick s classic work 25 years ago and so Dr Ainslie s book will fill a much needed gap in the market Currently up to date information can only be found in different forms and often with conflicting information in various journals conference and textbook publications Dr Michael Ainslie is eminently qualified to write this unique book He has worked on sonar performance modeling problems since 1983 He has written many peer reviewed research articles and conference papers related to sonar performance modeling making contributions in the fields of sound propagation and detection theory

Sounds of Our Times Robert T. Beyer, 1999 *A history of acoustics from the 19th century to the present* written by one of the pre eminent members of the acoustical community The book is both a review of the major scientific advances in acoustics as well as an account of famous acousticians and their discoveries taking in the development of the Acoustical Society of America Acoustics is distinguished by its interdisciplinary nature and the book duly explores the fields development in its relationship to other sciences In addition to covering the history of acoustics the book concludes with the future of acoustics Beautifully illustrated *A Guide to the Technical Literature of Oceanography* Suzanne E. DeCarre, United States. Naval Oceanographic Office, 1970 ***NOAA Technical Report ERL***. United States. National Oceanic and Atmospheric Administration, 1973 ***Sound Transmission Through a Fluctuating Ocean*** Roger Dashen, Walter H. Munk, Kenneth M.

Watson,2010-06-10 This 1979 book attempts to connect the known structure of the ocean volume with experimental results in long range sound transmission through the theory of wave propagation and the path integral approach The book is written at the post graduate level but has been carefully organised to give experimenters a grasp of important results without undue mathematics

Applied High-Resolution Geophysical Methods P.K. Trabant,2013-11-27 The discipline encompassing the use of high resolution geophysics for obtaining geoengineering survey data has evolved rapidly over the past decades to become an interdisciplinary subject encompassing the fields of Geophysics engineering geology marine geology oceanography and civil engineering While high resolution geophysical surveys are routinely performed offshore today this has been so only since the late 1960s High resolution geophysical methods are employed in the offshore environment to obtain a comprehensive picture of the sea floor morphology and underlying shallow stratigraphy The purpose of the survey methods is to assist in the design and installation of bottom supported structures such as drilling and production platforms and pipelines Drilling structures and pipelines of steel and or concrete have become behemoths with respect to their size and the complexity of their design in order to withstand for periods of up to twenty five years an extremely harsh environment including storm waves strong currents unstable sea floor conditions and great water depths It is therefore of paramount importance that the geometry and physical properties of the sea floor be well understood in order to provide an adequate foundation for the design lives of such structures On land engineering foundation data usually may be obtained by visual field inspection and shallow borehole information but offshore the presence of the water column places certain constraints on geoengineering investigations High resolution geophysical methods employed in the acquisition of geoengineering data offshore are defined as the use of seismic sources and receivers that operate at acoustic frequencies greater than 100 Hz
