Radiological Imaging of the Neonatal Chest, 2002-07-10 As outlined by Dr V Donoghue in her preface recent advances in the therapeutic management of neonates with low gestational age have resulted in a significantly higher survival rate and better outcome for these newborns. Lung and heart malformations or acquired diseases represent a major part of the life threatening conditions in this group of critically ill patients and radiological imaging is one of the main tools to define the appropriate therapeutic approach. This book not only provides an excellent update on the embryological and anatomical aspects of neonatal chest conditions but also offers a unique and comprehensive overview of our current knowledge and of recent progress in imaging techniques of the neonatal chest. Dr Donoghue has been successful in engaging a number of outstandingly qualified international experts to contribute to this work and I would like to congratulate her on the excellent coordination and editing of this book. I am confident that this outstanding volume will meet with great interest not only from general as well as specialised paediatric radiologists but also from neonatologists and paediatricians. I hope it will enjoy the same success as many previous volumes in this series.

Leuven ALBERT 1 BAERT Preface In the past two decades there have been extraordinary advances in the treatment of critically ill neonates resulting in improvements in their survival and a significant decrease in morbidity. Infants of very low gestational ages are now surviving.

Head and Neck Cancer Imaging Robert Hermans, 2006-02-03 This book provides a comprehensive review of state of the art imaging in head and neck cancer. Precise determination of tumor extent is of the utmost importance in these neoplasms as it has important consequences for staging of disease, prediction of outcome and choice of treatment. Only the radiologist can fully appreciate submucosal, perineural and perivascular tumor spread and detect metastatic disease at an early stage. Imaging is also of considerable benefit for patient surveillance after treatment. All imaging modalities currently used in the management of head and neck neoplasms are considered in depth and in addition newer techniques such as PET CT and diffusion weighted MRI are discussed. This book will help the reader to recommend, execute and report head and neck imaging studies at a high level of sophistication and thereby to become a respected member of the team managing head and neck cancer.
