Robo Sacer David S. Dalton, 2023-05-15 Robo Sacer engages the digital humanities critical race theory border studies biopolitical theory and necropolitical theory to interrogate how technology has been used to oppress people of Mexican descent both within Mexico and in the United States since the advent of the North American Free Trade Agreement NAFTA in 1994 As the book argues robo sacer identity emerges as transnational flows of bodies capital and technology become an institutionalized state of exception that relegates people from marginalized communities to the periphery And yet the same technology can be utilized by the oppressed in the service of resistance The texts studied here represent speculative stories about this technological empowerment These texts theorize different means of techno resistance to key realities that have emerged within Mexican and Chicano a x communities under the rise and reign of neoliberalism The first three chapters deal with dehumanization the trafficking of death and unbalanced access to technology The final two chapters deal with the major forms of violence feminicide and drug related violence that have grown exponentially in Mexico with the rise of neoliberalism These stories theorize the role of technology both in oppressing and in providing the subaltern with necessary tools for resistance Robo Sacer builds on the previous studies of Sayak Valencia Irmgard Emmelhainz Guy Emerson Achille Mbembe and of course Giorgio Agamben but it differentiates itself from them through its theorization on how technology and particularly cyborg subjectivity can amend the reigning biopolitical and necropolitical structures of power in potentially liberatory ways Robo Sacer shows how the cyborg can denaturalize constructs of zo by providing an outlet through which the oppressed can tell their stories thus imbuing the

oppressed with the power to combat imperialist forces **Robo Sapiens Japanicus** Jennifer Robertson,2018 Japan is arguably the first postindustrial society to embrace the prospect of human robot coexistence Over the past decade Japanese humanoid robots designed for use in homes hospitals offices and schools have become celebrated in mass and social media throughout the world In *Robo sapiens japanicus* Jennifer Robertson casts a critical eye on press releases and public relations videos that misrepresent robots as being as versatile and agile as their science fiction counterparts An ethnography and sociocultural history of governmental and academic discourse of human robot relations in Japan this book explores how actual robots humanoids androids and animaloids are imagineered in ways that reinforce the conventional sex gender system and political economic status quo In addition Robertson interrogates the notion of human exceptionalism as she considers whether civil rights should be granted to robots Similarly she juxtaposes how robots and robotic exoskeletons reinforce a conception of the normal body with a deconstruction of the much invoked Theory of the Uncanny Valley **Clearwater National Forest (N.F.), Robo Elk** ,2011 **Automating the News** Nicholas Diakopoulos,2019-06-10 From hidden connections in big data to bots spreading fake news journalism is increasingly computer generated An expert in computer science and media explains the present and future of a world in which news is created by algorithm Amid the push for self driving cars and the roboticization of industrial economies automation has proven one of the biggest news stories of our time Yet the wide scale automation of the news itself has largely escaped attention In this lively expos of that rapidly shifting terrain Nicholas Diakopoulos focuses on the people who tell the stories increasingly with the help of computer algorithms that are fundamentally changing the creation dissemination and reception of the news Diakopoulos reveals how machine learning and data mining have transformed investigative journalism Newsbots converse with social media audiences distributing stories and receiving feedback Online media has become a platform for A B testing of content helping journalists to better understand what moves audiences Algorithms can even draft certain kinds of stories These techniques enable media organizations to take advantage of experiments and economies of scale enhancing the sustainability of the fourth estate But they also place pressure on editorial decision making because they allow journalists to produce more stories sometimes better ones but rarely both *Automating the News* responds to hype and fears surrounding journalistic algorithms by exploring the human influence embedded in automation Though the effects of automation are deep Diakopoulos shows that journalists are at little risk of being displaced With algorithms at their fingertips they may work differently and tell different stories than they otherwise would but their values remain the driving force behind the news The human algorithm hybrid thus emerges as the latest embodiment of an age old tension between commercial imperatives and journalistic principles
