*Advances in Intelligent Robotics and Collaborative Automation* Richard Duro, Yuriy Kondratenko, 2022-09-01 This book provides an overview of a series of

advanced research lines in robotics as well as of design and development methodologies for intelligent robots and their intelligent components. It represents a selection of extended versions of the best papers presented at the Seventh IEEE International Workshop on Intelligent Data Acquisition and Advanced Computing Systems Technology and Applications IDAACS 2013 that were related to these topics. Its contents integrate state of the art computational intelligence based techniques for automatic robot control to novel distributed sensing and data integration methodologies that can be applied to intelligent robotics and automation systems. The objective of the text was to provide an overview of some of the problems in the field of robotic systems and intelligent automation and the approaches and techniques that relevant research groups within this area are employing to try to solve them. The contributions of the different authors have been grouped into four main sections: Robots Control and Intelligence Sensing Collaborative automation. The chapters have been structured to provide an easy to follow introduction to the topics that are addressed including the most relevant references so that anyone interested in this field can get started in the area.

Recent Advances in Robotics and Automation Gourab Sen Gupta, Donald Bailey, Serge Demidenko, Dale Carnegie, 2013-05-23. There isn't a facet of human life that has not been touched and influenced by robots and automation. What makes robots and machines versatile is their computational intelligence. While modern intelligent sensors and powerful hardware capabilities have given a huge fillip to the growth of intelligent machines, the progress in the development of algorithms for smart interaction, collaboration and proactiveness will result in the next quantum jump. This book deals with the recent advancements in design methodologies, algorithms and implementation techniques to incorporate intelligence in robots and automation systems. Several articles deal with navigation, localization and mapping of mobile robots, a problem that engineers and researchers are grappling with all the time. Fuzzy logic, neural networks and neuro-fuzzy based techniques for real world applications have been detailed in a few articles. This edited volume is targeted to present the latest state of the art computational intelligence techniques in Robotics and Automation. It is a compilation of the extended versions of the very best papers selected from the many that were presented at the 5th International Conference on Automation, Robotics and Applications ICARA 2011 which was held in Wellington, New Zealand from 6-8 December 2011. Scientists and engineers who work with robots and automation systems will find this book very useful and stimulating.
