Artificial Intelligence, and Virtual Reality Robert M. Geraci, 2010-02-05 Apocalyptic AI the hope that we might one day upload our minds into machines or cyberspace and live forever is a surprisingly wide spread and influential idea affecting everything from the world view of online gamers to government research funding and philosophical thought In Apocalyptic AI Robert Geraci offers the first serious account of this cyber theology and the people who promote it Drawing on interviews with roboticists and AI researchers and with devotees of the online game Second Life among others Geraci illuminates the ideas of such advocates of Apocalyptic AI as Hans Moravec and Ray Kurzweil He reveals that the rhetoric of Apocalyptic AI is strikingly similar to that of the apocalyptic traditions of Judaism and Christianity In both systems the believer is trapped in a dualistic universe and expects a resolution in which he or she will be translated to a transcendent new world and live forever in a glorified new body Equally important Geraci shows how this worldview shapes our culture Apocalyptic AI has become a powerful force in modern culture In this superb volume he shines a light on this belief system revealing what it is and how it is changing society

Robots In Space Roger D. Launius, Howard E. McCurdy, 2008-02-11 A look into the history of space exploration and its possible future and just where exactly robotics fit into it all Given the near incomprehensible enormity of the universe it appears almost inevitable that humankind will one day find a planet that appears to be much like the Earth This discovery will no doubt reignite the lure of interplanetary travel Will we be up to the task And given our limited resources biological constraints and the general hostility of space what shape should we expect such expeditions to take In *Robots in Space* Roger Launius and Howard McCurdy tackle these questions with rigorous scholarship and disciplined imagination jumping comfortably among the worlds of rocketry engineering public policy and science fantasy to expound upon the possibilities and improbabilities involved in trekking across the Milky Way and beyond They survey the literature fictional as well as academic studies and outline the progress of space programs in the United States and other nations They also assess the current state of affairs to offer a conclusion startling only to those who haven't spent time with Asimov Heinlein and Clarke to traverse the cosmos humans must embrace and entwine themselves with advanced robotic technologies 2008 Outstanding Academic Title Choice Magazine Praise for *Robots in Space* This short volume manages to capture the history of U S space flight to explain the underpinnings of U S space policy and to plot out the possibilities for our future in space in a style that most anyone can enjoy Andrew McMichael Park City Daily News

Architectural Robotics Keith Evan Green, 2016-02-10 How a built environment that is robotic and interactive becomes an apt home to our restless dynamic and increasingly digital society The relationship of humans to computers can no longer be represented as one person in a chair and one computer on a desk Today computing finds its way into our pockets our cars our appliances it is ubiquitous an inescapable part of our everyday lives Computing is even expanding beyond our devices sensors microcontrollers and actuators are increasingly embedded into the built environment In *Architectural Robotics* Keith Evan Green looks toward the next frontier in computing interactive partly intelligent meticulously designed physical environments

Green examines how these architectural robotic systems will support and augment us at work school and home as we roam interconnect and age Green tells the stories of three projects from his research lab that exemplify the reconfigurable distributed and transfigurable environments of architectural robotics The Animated Work Environment is a robotic work environment of shape shifting physical space that responds dynamically to the working life of the people within it home is a suite of networked distributed robotic furnishings integrated into existing domestic and healthcare environments and LIT ROOM offers a simulated environment in which the physical space of a room merges with the imaginary space of a book becoming a portal to elsewhere How far beyond workstations furniture and rooms can the environments of architectural robotics stretch Green imagines scaled up neighborhoods villages and metropolises composed of physical bits digital bytes living things and their hybrids Not global but local architectural robotics grounds computing in a capacious cyber physical home

Just Ordinary Robots Lamber Royakkers,Rinie van Est,2015-08-28 A social robot is a robot that interacts and communicates with humans or other autonomous physical agents by following social behaviors and rules attached to its role We seem to accept the use of robots that perform dull dirty and dangerous jobs But how far do we want to go with the automation of care for children and the elderly or the killin

R. Jena, Dr. Sohit Agarwal, 2025-05-03 The concept of robots may be seen as highly developed automated systems when viewed from a certain point of view In addition robotics may be seen as both a scientific area and a technology that has emerged from automation via the collaborative efforts of several other fields of endeavour These are some other viewpoints about robotics In general an automated system requires relatively little in the way of intelligence or manipulation yet it may be simply programmed to achieve productivity goals This is because it is able to function without human intervention Additionally it is feasible for the system to do some processes more than once Keeping in mind that the mechanical structure of an automated system often only permits it to do the one task for which it was created is an essential point to bear in mind The capacity of a control unit to be reprogrammed is what determines the degree of flexibility that it possesses in the majority of cases it is simply able to adjust the timing of the actions that have been defined Hardware is responsible for supplying the mechanical capability to carry out an operation of movement and or manipulation that has been predetermined in advance This capability comprises mechanical electrical pneumatic and hydraulic components Hardware is also responsible for giving the capability to carry out the operation Because the control and operation counterpart is composed of software and electrical components the system is able to work independently and with a degree of flexibility This is made possible by the system's capacity to function independently Both of these are necessary elements that make up an automated system and they work together to accomplish their respective functions It is necessary to consider their design and operation as separate but complementary aims in order to attain and maintain optimal performance in an automated system This is because they are so dependent on one another that they are unable to function without one another *Machine Intelligence* A. Gomersall, 2013-03-14 In 1981 Robotics Bibliography was published containing over 1 800 references on industrial robot research and development culled from the scientific literature over the previous 12 years It was felt that sensors for use with industrial robots merited a section and accordingly just over 200 papers were included It is a sign of the increased research into sensors in production engineering that this bibliography

on both the contact and non contact forms has appeared less than three years after that first comprehensive collection of references appeared In a review in 1975 Professor Warnecke of IPA Stuttgart drew attention to the lack of sensors for touch and vision Since then research workers in various companies universities and national laboratories in the USA the UK Italy Germany and Japan have concentrated on improving sensor capabilities particularly utilising vision artificial intelligence and pattern recognition principles As a result many research projects are on the brink of commercial exploitation and development This bibliography brings together the documentation on that research and development highlighting the advances made in vision systems but not neglecting the development of tactile sensors of various types No bibliography can ever be comprehensive but significant contributions from research workers and production engineers from the major industrialised countries over the last 12 years have been included Artificial Intelligence – Agent Behaviour , **Edmund Berkeley and the Social Responsibility of Computer Professionals** Bernadette Longo,2015-09-01 Edmund C Berkeley 1909 1988 was a mathematician insurance actuary inventor publisher and a founder of the Association for Computing Machinery ACM His book *Giant Brains or Machines That Think* 1949 was the first explanation of computers for a general readership His journal *Computers and Automation* 1951 1973 was the first journal for computer professionals In the 1950s Berkeley developed mail order kits for small personal computers such as Simple Simon and the Braniac In an era when computer development was on a scale barely affordable by universities or government agencies Berkeley took a different approach and sold simple computer kits to average Americans He believed that digital computers using mechanized reasoning based on symbolic logic could help people make more rational decisions The result of this improved reasoning would be better social conditions and fewer large scale wars Although Berkeley's populist notions of computer development in the public interest did not prevail the events of his life exemplify the human side of ongoing debates concerning the social responsibility of computer professionals This biography of Edmund Berkeley based on primary sources gathered over 15 years of archival research provides a lens to understand social and political decisions surrounding early computer development and the consequences of these decisions in our 21st century lives *Comparative handbook: robotic technologies law* Alain Bensoussan,Jérémy Bensoussan,2016-06-28 Studies of the overall impact of robotics on the economy have shown that investments in its various sectors industrial professional and service robotics are increasing globally and the markets associated with them are valued in billions Robotization improves the competitiveness of enterprises while collaborative robotics reinvents methods of production Beyond the economic outlook service robotics backed by the development of artificial intelligence raises challenging ethical and social issues The legal analysis of robotics is no mean feat because it covers a very diverse technical reality Companies whose businesses are focused on robotic technologies and applications can be confronted with a complex legal situation resulting from the plurality of the applicable rules which have not necessarily been conceived or adopted bearing in mind their specific constraints This situation should not hamper their

development It only implies taking cues from the economic legal norms which promote such developments and conducting an analysis of the legal risks which they face given the applicable rules of liability This comparative study carried out by members of the Lexing Network proposes an overview having regard to the legislation of 17 different countries of the legal issues raised by robotics and the way the law in force responds in a more or less satisfactory manner Discover the authors contributors in details under the tab Extraits

Cyber-Humans Woodrow Barfield,2015-12-17 It is predicted that robots will surpass human intelligence within the next fifty years The ever increasing speed of advances in technology and neuroscience coupled with the creation of super computers and enhanced body parts and artificial limbs is paving the way for a merger of both human and machine Devices which were once worn on the body are now being implanted into the body and as a result a class of true cyborgs who are displaying a range of skills beyond those of normal humans beings are being created There are cyborgs which can see colour by hearing sound others have the ability to detect magnetic fields some are equipped with telephoto lenses to aid their vision or implanted computers to monitor their heart and some use thought to communicate with a computer or to manipulate a robotic arm This is not science fiction these are developments that are really happening now and will continue to develop in the future However a range of legal and policy questions has arisen alongside this rise of artificial intelligence Cyber Humans provides a deep and unique perspective on the technological future of humanity and describes how law and policy will be particularly relevant in creating a fair and equal society and protecting the liberties of different life forms which will emerge in the 21st century Dr Woodrow Woody Barfield previously headed up the Sensory Engineering Laboratory holding the position of Industrial and Systems Engineering Professor at the University of Washington His research revolves around the design and use of wearable computers and augmented reality systems and holds both JD and LL.M degrees in intellectual property law and policy He has published over 350 articles and major presentations in the areas of computer science engineering and law He currently lives in Chapel Hill NC USA
