Gardiner,2025-06-10 Because of global warming scientists predict that the majority of the world s coral reefs may be gone by the end of the century based on rapid declines in the past century In fact the amount of living coral on Caribbean reefs dropped by 80% in the last three decades of the 1900s But there s hope Researchers studying both living and fossilized corals are bringing together their work to better understand the past and present of coral reefs and applying that understanding to help reefs become more resilient into the future In Reefs of Time paleontologist Lisa Gardiner introduces readers to coral reefs through the lens of the fossilized limestone structures they ve left behind Gardiner argues that understanding the life cycles of reefs that existed in shallow deep time that is the era of the youngest fossils inhabited by creatures much like those of today s world but unaffected by human contact can help us better grasp the unique challenges facing corals in the present As Gardiner shows once we know what happened in the past and what s happening in the present we can begin to solve the questions of the future Do coral reefs have any chance of surviving climate change ocean warming pollution and other problems of the Anthropocene And if so how can humans be part of the solution The book begins with an introduction to fossilization and the singular way coral and other limestone producing organisms interact with the ocean s geological cycles After an exploration of ancient reefs and the field of paleoecology Gardiner shifts to a discussion of present day reefs and the deleterious effects of ocean warming and other stressors that impact coral s ability to bounce back from disruption She then returns to the fossil record to explore ways coral has built up resilience in the past and discusses how scientists can use this knowledge to help coral become more resilient in the future Throughout Gardiner draws on her own research and experience studying living and dead corals along with a synthesis of the latest conclusions from other scientists to illuminate how unlocking the recent past can help us change the future Provided by publisher **Affect and Emotion in Tourism** Dorina-Maria Buda,Jennie Germann Molz,2023-03-31 Bringing affect and emotion to the forefront of tourism studies this book presents a new generation of scholars who consolidate emerging affective approaches and establish a route

for scholarship that examines the roles of emotion and affect in tourism Attuning to affect and emotion this book steers the affective turn to encompass touring bodies and tourism places Engaging the concept of affect as a constitutive element of social life often leaves academics grasping for terminology to describe something that is by its very nature beyond words For this reason as evident in the four interconnected sections of this volume studying affect poses a significant and fruitful challenge to the status quo of social scientific method and analysis From African American emotional labour while travelling to visiting Banksy's Dismaland park to affective heritagescapes self love and travelling mittens and across socio spatial theories of emotions decolonial feminist theory and atmospheric politics this book demonstrates the epistemic and empirical richness of affective tourism Along with the contributors to this volume the editors make a case for thinking about emotions and affects through collective and individual practices as interrelated shaping tourism encounters in and with places That is to break it down as doing and as shared between bodies and places through the doing The chapters in this book were originally published as a special issue of *Tourism Geographies*
