Dr Space Junk vs The Universe Alice Gorman,2020-11-10 A pioneering space archaeologist explores artifacts left behind in space and on Earth from moon dust to

Elon Musk's red sports car Alice Gorman is a space archaeologist she examines the artifacts of human encounters with space. These objects left behind on Earth and in space can be massive dead satellites in eternal orbit or tiny discarded zip ties around a defunct space antenna. They can be bold an American flag on the moon or hopeful messages from Earth sent into deep space. They raise interesting questions. Why did Elon Musk feel compelled to send a red Tesla into space? What accounts for the multiple rocket-themed playgrounds constructed after the Russians launched Sputnik? Gorman affectionately known as Dr Space Junk takes readers on a journey through the solar system and beyond deploying space artifacts, historical explorations and even the occasional cocktail recipe in search of the ways that we make space meaningful. Engaging and erudite Gorman recounts her background as a nonspace archaeologist and how she became interested in space artifacts. She shows us her own piece of space junk, a fragment of the fuel tank insulation from Skylab, the NASA spacecraft that crash landed in Western Australia in 1979. She explains that the conventional view of the space race as the triumph of the white male American astronaut seems inadequate; what really interests her, she says, is how everyday people engage with space. To an archaeologist, objects from the past are significant because they remind us of what we might want to hold on to in the future.

Structured with in-depth archival research, interviews with protagonists, unpublished photographs and an extensive bibliography, it follows a unique history from the post-war relaunch of physical sciences in West Germany to the spectacular developments and successes of cosmic sciences in the second half of the 20th century up to the emergence of multi-messenger astronomy. It reveals how the Society acquired national and international acclaim in becoming one of the world's most productive research organizations in these fields.

Developing National Power in Space Brent Ziarnick, 2014-12-24. Exploring the nature of space programs and how nations can maximize advantages gained from space operations, this book draws from military and economic theory to describe an original model of the development and employment of a nation's ability to operate in space. Chapters discuss the implications for the history and organization of America's space program, particularly its military dimension. The rise of American naval power early in the 20th century is investigated as an historical analog to the current American situation in space and a method is proposed for the U.S. to lead a new space age. This book's unique theory and analysis will be of interest to policy makers, planners, leaders and enthusiasts interested in America's future in space.
