Diemen,Matthew Hannon,Evangelos Gazis,Aidan Rhodes,2019 This book addresses the question how effective are countries in promoting the innovation needed to facilitate an energy transition At the heart of the book is a set of empirical case studies covering supply and demand side technologies at different levels of maturity in a variety of countries The case studies are set within an analytical framework encompassing the functions of technological innovation systems and innovation metrics The book concludes with lessons and recommendations for effective policy intervention **Utilisation of Excess Heat Towards**

a Circular Economy Sofia Päivärinne,2017-11-23 In order to significantly lower the environmental impact from human activities numerous efforts and approaches related to the transformation of human activities have developed during the last decades Examples of such efforts are policies and strategies at different levels some with a top down approach focusing on extensive institutional changes and some with a bottom up approach focusing on industrial actors and industry led activities One essential aspect of these efforts concerns the energy used producing the products and services provided within our society This includes for example improved efficiency of processes in order to minimise the amount of energy used or optimisation of efficiency by using energy with the lowest possible exergy value It can also be about re use of energy which is

the focus of this thesis Heat which is the main by product of all energy systems can be utilised for heating purposes to lower the primary energy demand for heating Increased utilisation of excess heat however requires collaboration between normally unrelated actors those with a supply of and those demanding excess heat In Sweden which is a Northern European country with high demand for heat the tradition of large energy intensive manufacturing industries generating large amounts of excess heat in combination with well established district heating distribution systems constitute good conditions for excess heat utilisation Despite the fact that Sweden is among the world leaders in utilising excess heat there is however still a large unutilised potential From this background the objective of this thesis is to identify challenges behind excess heat utilisation for heating purposes and to propose practical suggestions to facilitate expanded excess heat utilisation The overall objective is analysed with a focus on drivers and barriers behind interorganisational collaborations on excess heat utilisation important components of interorganisational business models and how the technical conditions regarding supply and demand could be facilitated by strategic municipal spatial planning processes The research is largely based on interviews conducted with societal actors with different perspectives on excess heat utilisation energy companies industries generating high grade excess heat facilities generating low grade excess heat facilities demanding low grade excess heat experts of utilisation of low grade excess heat branch organisations municipal spatial planners energy and climate advisors and developers Document studies have been conducted in order to collect case specific knowledge The research questions are explored based on literature studies on the principles of industrial symbiosis business model perspective and strategic planning Further they are examined in a Swedish context It is concluded that the three perspectives complement each other by providing a system perspective on increased utilisation of excess heat as they seek to contribute both environmental and financial benefits at both a company and societal level In order to facilitate further utilisation of excess heat it is important to focus on the organisational factors of humility honesty transparency trust fine grained information transfer joint problem solving and shared visions of common goals which are important conditions behind development of functional and long term durable collaborations Business models for collaboration could contribute to the creation of these organisationally important conditions Such business models could also provide knowledge on how to create and capture joint values For some collaborations involving actors lacking the technical knowledge related to the capturing and distribution of excess heat a third party providing services related to the technical knowledge required could be beneficial Collaborations in which one of the actors consists of an energy company often entail the technical knowledge required This implies that different collaborations involving different types of actors and under different prevailing financial technical and organisational conditions require customised and flexible business solutions Local authorities could through their overall function initiate interorganisational collaborations on excess heat within the framework of municipal spatial planning The results do however show that the investigated planning processes could develop more extensive stakeholder participation to include further

societal actors related to excess heat More extensive stakeholder participation have the potential to initiate new development of collaborations on excess heat between normally unrelated actors both with and without involvements of third party knowledge brokers A broader participation is also expected to result in increased knowledge on how to plan to further facilitate the condition of excess heat utilisation *NCI Monographs* ,1987 *Iron Trade Review* ,1928 **Mining and**

Functional Thinking for Value Creation Jürgen Hesselbach,Christoph Herrmann,2011-03-18 After the IPS2 conferences in Cranfield and Link ping in 2009 and 2010 the 3rd CIRP International Conference on Industrial Product Service Systems IPS2 2011 takes place in Braunschweig Germany IPS2 itself is defined as an integrated industrial product and service offering that delivers value in use The customers expect comprehensive solutions which are adapted to their individual needs IPS2 offers the possibility to stand out from competition and for long term customer loyalty Particularly in times of economic crisis it becomes apparent which producing companies understand to satisfy the needs and requirements of their customers

Especially in this relatively new domain IPS2 it will be important to keep track of the whole context and to seek cooperation with other research fields and disciplines The 3rd CIRP International Conference on Industrial Product Service Systems IPS2 2011 serves as a platform for such collaborations and the discussion of new scientific ideas **Publications of Los Alamos**

for the physiological assumptions needed to develop successful mathematical tools and finally the third section named Applications presents examples of how the marriage of the first two sections are used to solve problems of today and tomorrow This important text is the vital resource that Offers a reference book in the field of heating and cooling of tissue and associated damage Provides a comprehensive theoretical and experimental basis with biomedical applications Shows how to develop and implement both simple and complex mathematical models to predict tissue temperatures Includes simple examples and results so readers can use those results directly or adapt them for their applications Designed for students engineers and other professionals a comprehensive text to the field of heating and cooling of tissue that includes proven theories with applications The author reveals how to develop simple and complex mathematical models to predict tissue heating and or cooling and associated damage

Essential Guide to Calving Heather Smith Thomas, 2008-01-01 Every cattle farmer from the keeper of a family milk cow to the rancher overseeing a large herd will gain confidence and control by becoming more knowledgeable about calving Healthy pregnancies safe births and thriving calves are critical to every cattle operation and in remote farm locations the veterinarian is not always readily available Even if the vet is nearby the farm's finances will be healthier if the farmer can oversee most of the calving process Heather Smith Thomas an expert on livestock with decades of firsthand experience covers every routine situation likely to arise before during and after calving And when the calving process is out of the ordinary Thomas guides the farmer through pregnancy problems difficult deliveries recognizing when to call in a vet and postpartum complications Her thorough coverage of what to expect in every situation gives farmers the knowledge they need to care personally for their cows The second half of the book is dedicated to ensuring that every calf gets off to a healthy start Thomas helps farmers work with cows reluctant to nurse substitute mothers and frail calves A complete chapter on calfhood illnesses explains warning signs and offers tips on prevention and treatment As people return to farming in growing numbers the demand for safe humane livestock knowledge continues to increase Farmers will turn to this reliable volume again and again as they welcome each new calf
